

NEWS SUMMARY

GENERAL

Bulgaria returns to terror gang

Bulgaria has returned to West Germany four alleged terrorists including Herr Till Meyer, who was sprung free from Moabit Prison in West Berlin last month. He is accused of taking part in the murder of Berlin's chief judge in 1974.

Meyer was spotted by a West Berlin prison guard on holiday in Bulgaria. The three people arrested with him at a Black Sea beach resort have been identified as the women responsible for liberating him.

West German political leaders praised Bulgaria for its decision to send the terrorists back quickly, particularly as Bulgaria is not a member of Interpol and does not have an extradition treaty with Bonn. The prison guard may stand to gain about \$30,000 for the return for information leading to the recapture.

Ogaden flare-up

Somali guerrillas claimed they had recaptured the main town in the southern part of the disputed Ogaden region of South-East Ethiopia after a fierce battle in the desert territory. Although Ethiopia did not confirm the report it is the first time since March that guerrillas have claimed recapture of a strategic centre. Ethiopian leader on secret visit. Page 4

Homes evacuated

Repeated aftershocks threatened another earthquake in Salónica, Greece, where all buildings have been evacuated and 200,000 inhabitants are now living in tents, squares and other open places. About half a million people have fled from the city. In Bekes, South Hungary, power lines were cut and chimneys collapsed when earth tremors were felt.

Attack on critic

A bomb severely damaged the Buenos Aires suburban home of St. Juan Alemann, Argentina's Treasury Secretary, who has been at the centre of controversy after claiming that his country, 50 victors over Peru for a place in the final, spent too much money on the World Cup.

Bomb man jailed

A Provisional IRA volunteer was jailed for five years in Dublin for possessing firearms in the city last year. Patrick Currie, 24, of Belfast, told the Special Criminal Court that the bombs were for use against the British forces in Northern Ireland.

Bungalow blast

In 55-year-old man, who did not want to spend two weeks in an old people's home, was found hanging in his garden after an explosion demolished his bungalow in the Devon village of Teigngrace, near Newton Abbot. Police said the bungalow appeared to have been soaked in petrol before the blast.

Peace proposal

Ir. Cyrus Vance, U.S. Secretary of State, said in an interview in French magazine that the West Bank of the River Jordan and the Gaza Strip should be linked ultimately to Jordan. Mondale to stress Israeli flexibility. Page 4

Briefly...

Akistan's Ambassador to the U.K., Lt. Gen. Muhammad Khar Khan, has died in London after an heart attack.

Former security officers are among 12 men to appear in the unstable Court next month charged with stealing vehicle parts worth £12,000 from Chrysler's van factory.

One bank robber shot and seriously wounded a security guard before grabbing £5,770 in suitcase from Lloyds Bank in Croydon, Birmingham.

Ath youth, 19, has been charged with the murder of nine-year-old Jessy Maddocks, found strangled yesterday.

Black and silver was found with a cargo intact in North Stonington, Connecticut.

Singer plans £8m Scottish boost but loss of 2,800 jobs

BY CHRISTOPHER DUNN

Singer, the U.S. multinational, announced yesterday the loss of 2,800 jobs at its Clydebank sewing machine factory in Scotland. It is part of a four-year plan to restructure the operation—but the plant will also receive an £8m injection of new investment.

Mr. James Milne, general secretary of the Scottish TUC said: "This is a catastrophe for Clydebank. Unions at the factory have been fighting for a long time to get the plant to produce modern sewing machines. But Singer proposals to come up with an 'unacceptable and unworkable' plan are thought to have been some heat out of the situation.

Clydebank, the largest factory in the Singer group, accounting for a fifth of its world production, has suffered total job cuts since last November of 3,800 in an area of high unemployment. Singer established itself at Clydebank in 1984 and the factory is said to be the oldest in Scotland to be still working.

Under the new scheme, Clydebank is to be the main production centre for a new line of high volume, lightweight sewing machines, comprising four models.

They will be sold in the U.S. and Europe and help Singer combat the threat from the Japanese, particularly in the U.S.

But they will not incorporate the new Singer electronic technology for sewing machines, now built into machines made at Karlshruhe, West Germany and

ing machines in Europe and the U.S. has shrunk from 5.2m machines in 1972 to 4.6m last year," he said.

Contraction of major markets had led to losses at Clydebank for the last three years. The 1977 loss was £2.8m. The industrial sewing side had not been profitable throughout the 1970s.

About 500 redundancies are expected—less than 20 per cent—and the main cuts will come through natural wastage and early retirement.

Mr. John McFadyen, works convenor for the Amalgamated Union of Engineering Workers, said Singer had offered the factory a unique opportunity.

He was confident the work force could come up with a new product to fill the gap created by the rundown of the industrial sewing machine side.

Mr. Gavin Luard, Scottish executive of the union, said: "The unions will behave logically and not emotionally."

Mr. Bruce Milne, Secretary for Scotland, said that the loss of so many jobs at Clydebank, Scotland's longest established factory, was a matter of the greatest concern.

Demand for household sewing machines in Europe and the U.S. has shrunk from 5.2m machines in 1972 to 4.6m last year," he said.

Medieval art puts sale total at £11.6m

BY ANTONY THORNCROFT

In just over two hours in its main Bond Street saleroom in London yesterday, Sotheby's auctioned works of medieval art from the Robert von Hirsch collection for £8,388,150.

This was a record for any single session in an auction house. The total also equalled the sum that Sotheby's brought in last summer during the week of the Mientmore Towers sale.

In the afternoon Renaissance works of art contributed another £300,788, bringing the von Hirsch total after four sessions to £11,666,938.

With important Impressionist paintings still to come, the total initially forecast cautiously by Sotheby's at £25m, could well reach £35m.

It was difficult to forecast the prices for the medieval works of art because of their rarity, but Sotheby's expected German museums to be out in force.

It was no surprise, then, that the German dealer Reiner Zietz should pay £12m, (to which must be added a 10 per cent buyer's premium) for a Mosan enamel medallion of the angel representing Charity, made around 1150 probably by Godefrid de Claire. Zietz was bidding on behalf of the Staatliche Museum of Berlin.

This was the third highest price ever paid at auction for a single lot, being exceeded only by pictures by Velasquez and Titian. Agnews, the London dealer, almost certainly bidding on behalf of an overseas client, had earlier paid £1.1m for an enamel bracelet reputed to have been worn by the Emperor Frederick Barbarossa.

A Byzantine ivory relief of Christ in Majesty, made in Constantinople around 1030, sold anonymously for £500,000 while the British Rail Pension Fund, which has been criticised for investing in art, paid £550,000 for a 12th century English gilt altar candlestick.

Only three similar candlesticks are known to have survived. It was one of the few English items collected by Robert von Hirsch, a German industrialist who fled to Switzerland in 1934 and died, aged 84, last November.

The top price in the afternoon session was the £110,000 paid for a walnut polychrome group of the Virgin and Child produced in Ferrara around 1470. Saleroom Page 6

Braniff gets go-ahead to fly Concordes

BY JOHN WYLES IN NEW YORK AND PAUL TAYLOR IN LONDON

BRANIFF INTERNATIONAL, the Texas airline, last night cleared the main hurdle to its plans for operating Concordes between Washington DC and Dallas-Fort Worth, Texas, when the U.S. Civil Aeronautics Board gave the service tentative approval.

At the same time, it was learned in New York, British Airways hopes to start a direct London-Dallas-Fort Worth Concordes service. It will seek authorisation for the service at UK Civil Aviation Authority hearings next week, when British Caledonian will make a rival claim to be the designated carrier for the route.

British Airways and Air France agreed more than a year ago to lease the aircraft, they operate from Paris and London to Washington DC for an onward leg to Dallas-Fort Worth. Braniff said yesterday it hoped to start services in October to link the city superannually three times a week with London and three times a week with Paris.

Apart from enabling the aircraft to win greater acceptance among American travellers the main importance of the agreement to the European airlines is that it will increase utilisation of their Concordes and take them closer to an operating profit.

Braniff, which seems certain to be the first U.S. airline operating Concordes, said the British Airways plan for a direct service did not affect its programme. It would start crew training for Concordes shortly. Braniff will not be able to fly Concordes superannually on the domestic leg but aims to fly at 95 per cent of supersonic speed, saving shortly.

Assuming that the board's approval is endorsed, the only other obstacle is a Federal Aviation Authority certificate taken without a formal vote and involves a request to its staff to show cause why the airline should not operate Concordes.

The CAB's tentative approval for Braniff's application was taken without a formal vote and involves a request to its staff to show cause why the airline should not operate Concordes.

BNOC makes major new North Sea oil find

BY RAY DAFTER, ENERGY CORRESPONDENT

BRITISH National Oil Corporation has made a significant North Sea oil discovery with its first well drilled under the latest round of licences.

Further wells have to be drilled, but initial reports suggest that the field could contain between 250m and 500m barrels of recoverable reserves. That would make the reservoir a commercial size, and quite possibly larger than several fields now being exploited in the area.

The find lies in concession 30/17B, some 27 miles east of Dundee and just a few miles from Shell/Esso's Fulmar Field.

Shell and Esso each holds a 24.5 per cent stake in the BNOC concession, so any development will probably be linked with exploitation of the Fulmar Field.

Companion offshore loading facilities, for instance, might be used.

BNOC said that oil flowed at a test rate of 4,975 barrels a day from one section of hydrocarbon-bearing rock.

Reservoir pressure should enable oil to be produced from a commercial well at two to four times that rate. Industry reports also indicate that the well encountered three intervals of oil-bearing rock.

Initial evaluation of this discovery is encouraging and further appraisal drilling to determine the significance of the accumulation will be carried out on the block," BNOC said.

The British drilling rig Atlantic 1 has now been released to evaluate oil prospects on block 21/18 to the north of the state corporation's Thistle Field, but BNOC is keen to drill one or two more wells on block 30/17B this summer.

BNOC has two prime reasons for wanting to evaluate the new discovery quickly.

First, its production team, which has just brought on stream the Thistle Field, would welcome a new development project.

Second, if the exploitation of the oil is to be linked to Fulmar, the partners might want to evaluate soon the size and type of offshore loading system that would be required.

The Government has just given Shell and Esso approval to develop the Fulmar Field at a cost of some £90m.

The field, with an estimated 500m barrels of recoverable reserves, is due to begin producing oil in 1981.

J. Lyons passes final dividend

BY ANDREW TAYLOR

J. LYONS' shares plunged 24p to 76p yesterday, knocking £10m off the group's market capitalisation, as the City took stock of the group's announcement that it will not be paying a final dividend after pre-tax losses of £345,000 in the second half.

Group pre-tax profits in the year to March 31, 1978, fell 37 per cent to £8.2m. The previous year the group earned profits of almost £10m and this time the City had been forecasting profits of between £11m and £13m.

Turnover last year rose only 3 per cent to £790m.

Mr. Neil Salmon, chairman of Lyons, said that the group had decided not to "further erode reserves" by paying a final dividend. Losses after tax but before extraordinary items totalled £318,000 for the year while re-

serves had already been reduced by £4.9m—including provisions of £2m against the closure of loss-making meat operations in France and against the group's investment in Spillers French.

With related advance corporation tax the cost to Lyons of maintaining their final dividend would have been £31m. Shareholders' funds stand at about £122m.

Food operations in the UK were worst hit with trading profits more than halved at £5.7m. The group blamed a drop in consumer spending and stiff price competition. It also had some sharp words to say about the Price Commission's intervention on tea prices earlier this year.

Mr. Salmon said that the dis-

location in tea trade, caused by fluctuating prices, had been "aggravated by inappropriate Governmental intervention" which had impeded blenders to make premature price reductions a month before they were justified.

He said that dislocation in the tea market had cost the group nearly £5m profit of which £1m was a direct result of Government intervention on prices.

On the question of future dividend payments the group said that it intended to restore dividends to at least 1976-77 levels—provided that results for the year matched current trading trends.

Slim prospect of early end to French strikes

BY DAVID WHITE

PARIS, June 22

PROSPECTS FOR resolving the three major industrial disputes which have broken out in France grew more distant today.

A strike movement at the Moulins domestic appliance company has spread and seven of the company's 12 plants in Normandy were today under workers' occupation. Civilian employees at the Defence Ministry's munitions plants and naval yards, strikebound since last week, appeared to be digging in for a long conflict and unions claimed that 60,000 had come out.

At the Renault car plant at Flins outside Paris, the company is hoping for a return to normal production next week. Police moved in for the second time on the night of Tuesday to Wednesday and cleared out the occupied heavy press shop.

Riot police still stood guard in the factory today to stop the 100-or-so strikers from recouping the area. Some other workers refused to service equipment in solidarity with the strikers, but the company said activity in the

press shop was back to normal levels with more than half the machines working. It will be four or five days, however, before stocks of parts have regained sufficient levels for Renault to take back the 9,000 workers it laid off on Tuesday.

Initial attempts to reach agreement with the strikers have failed. Although a compromise has been outlined on two points, on retraining and on immediate workers' extra unpaid holiday, there is no sign of accord on the strikers' claim for a FFr 300 (25s) a month pay rise.

The company has already lost production of 15,000 cars and this is expected to rise to 20,000 by the time the factory's operations have been fully resumed.

Railway workers in Lyons, on strike since Monday, opted yesterday to go back to work. But several railway union branches have called a strike for this weekend, which will hit Paris suburban services. Dockers' unions have also called a strike for the weekend.

Warsaw Pact concession reported at MBFR talks

BY PAUL LENDVAI

VIENNA, June 22

THE LATEST Warsaw Pact proposal at the 19-nation East-West mutual and balanced force reduction talks (MBFR) was a significant move towards the eastern position, senior NATO officials said today, as the sides completed their 17th plenary meeting since the talks started here in October 1973.

Though the gap is as wide as ever with regard to manpower figures, new details about the Eastern initiative confirmed the general impression that the negotiations have entered a more meaningful phase. According to well-informed Western and Eastern sources, the Warsaw Pact proposal involves the following new factors:

In the so-called Phase One (within one year) the Soviets would reduce their forces in the central region by 30,000 men, 1,000 battle tanks and 250 infantry combat vehicles (or armoured personnel carriers) in exchange for a reduction of the U.S. forces by 14,000 men, 1,000 nuclear warheads, 54 nuclear capable aircraft and 36 ballistic missiles.

In a Phase Two, which would take up to three years, the Warsaw Pact now suggests that overall levels would be reduced on each side to 700,000. The Warsaw Pact would cut its forces by 105,000 and later by 95,000. Though the West welcomes the Eastern acceptance of the principle of collective ground force ceilings, it still insists that the Warsaw Pact's figures for existing troop levels are wrong. The conflict over the interpretation of manpower data has thus emerged as perhaps the major outstanding issue, a Western diplomat said.

Certain potentially significant changes have also been made in the Eastern proposals with regard to the so-called numerical limits placed on national armies. NATO sticks to a collective ceiling for each side as a whole, since numerical sub-ceilings on the army of each participant would make any future shifts within the alliance impossible. The Warsaw Pact now accepted the concept of collective ceiling but combined it with certain limitations.

Turkey debt rescheduling

BONN, June 22

THE DEBT rescheduling operations for Turkey worked out by major industrialised countries in Paris last month will cost the West German "Government" around DM750m, spread over the 1978 and 1979 budgets, Herr Hans-Peter Behring, head of the export insurance section at the Economics Ministry, has said.

This is one of the largest shortfalls West Germany has ever faced under an international rescheduling programme and illustrates a trend towards growing debt repayment difficulties by developing countries, he said.

West Germany's stake in the rescheduling operation, worked out under the aegis of the OECD, is the largest of the countries involved, reflecting its position as Turkey's most important trading partner.

Under the programme, creditor countries agreed to reschedule over a medium term period about \$1.2bn of Turkish debts to governments and exporters built up under official export credit schemes.

The "relatively generous" agreement foresees the rescheduling of all such outstanding short term debts as of May 20 this year, and a somewhat further-reaching arrangement for

medium and long term debts, Herr Behring said.

Turkish Prime Minister Bülent Ecevit, completing two days of Kremlin talks, yesterday conferred with President Leonid Brezhnev on his country's rapidly expanding relations with the Soviet Union.

Mr. Ecevit, who has been given a warm welcome by Soviet leaders, met the Communist Party chief after meeting Prime Minister Alexei Kosygin and putting the finishing touches to a political document setting out principles for friendly relations between the two nations.

Conclusion of the document has been held up since Moscow and Ankara reached preliminary understanding on its contents in 1975. Turkey, a member of NATO, apparently believed that the Soviet draft was too close to a "non-aggression" pact.

A Turkish Embassy spokesman said that Mr. Brezhnev told the Turkish Premier that he now wanted to strengthen ties with Moscow's southern neighbour.

Mr. Kosygin stressed the same theme in a speech at a Kremlin banquet last night. The two men also discussed "outstanding international matters," the spokesman said. Reuter

Guaranteed prices for ACP sugar to rise 2%

By Our Own Correspondent

BRUSSELS, June 22

AFRICAN, CARIBBEAN and Pacific (ACP) countries party to the 1978-1980 sugar agreement accepted EEC offers for a 2 per cent rise in the guaranteed prices of their cane sugar exports to the Community for the 12 months from July 1 this year.

The offer, the minimum allowable under the sugar protocol of the Lome convention, reflected an uncompromising stand by the Community.

The ACP countries had sought a 9 per cent rise, backdated to May 1, together with subsidies for storage costs, but none of their supplementary demands was met.

Under the sugar protocol, ACP sugar can be sold freely on EEC markets but the Community is bound to take at least 1.2m tonnes a year as a guaranteed minimum.

Since EEC Ministers earlier this year awarded Community beet producers a 2 per cent price rise, a parallel rise for ACP producers was obligatory. But the guaranteed price is, in theory, negotiable.

ACP states this year stressed their determination to win some form of concession from the Community by sending their Ministers to negotiate instead of leaving it as usual to their ambassadors.

But talks quickly broke down last month when the Commission refused to budge from its initial position, saying the ACP producers who today signed the agreement in Brussels.

In view of the state of the sugar market within the Community, it might have been politically difficult for the mission to ward ACP producers higher guaranteed prices than its own beet producers.

The Community's exportable surplus currently stands at around 3m tonnes and another 3.3m tonnes are expected from this year's crop. Moreover, Community sugar prices are well above world prices, which have dropped to around £100 per tonne from £550 four years ago.

The price guaranteed to ACP producers is 27.51 units of account per 100 kilos.

Last year, ACP producers were awarded a 2 per cent rise but got an effective 6 per cent rise as the result of commitments from Tate and Lyle, and there are suggestions that a similar agreement may have been reached this year.

Our Commodities Staff adds: Although the official price to be paid to the ACP cane suppliers has been set at 27.51, refiners have again agreed to pay more.

Tate and Lyle, the British refiner which processes most of the ACP raws, will pay 28.22ua. This special arrangement was established to give the raw sugar suppliers a share of the profits currently being earned in the EEC sugar market.

The extra 3.1ua a tonne represents half the difference between the EEC intervention price for sugar and the market price.

Dutch trade gap widens during April

HOLLAND'S trade deficit worsened considerably in April to Fl 688m (\$308m), Charles Batchelor writes from Amsterdam. This was the worst deficit since the Fl 873m recorded in June, 1977, and compares with March's Fl 135m and Fl 192m in April, 1977. Exports for last April totalled Fl 9,650m, and imports Fl 9,660m.

For the first four months of the year, however, the deficit was down on that for the same period last year. Imports totalled Fl 37,40m, exports Fl 36,30m, to show a deficit of Fl 1,10m, compared with Fl 1,60m in the same period last year.

Tremors continue in Salonica

Half-a-million of Salonica's 700,000 inhabitants have fled the city as repeated aftershocks threaten another earthquake following that on Tuesday which killed at least 20 people, Reuter reports from Salonica.

200,000 are living in parks, squares, and other open spaces. Major Vassilios Koukos, of the Salonica gendarmerie, fears that the death toll may rise. He said that more than 500 blocks of flats were made uninhabitable while more than 800 houses suffered serious damage. Meanwhile, a series of minor earth tremors yesterday shook southern Hungary early causing damage but no casualties.

Jens Krag dies

Mr. Jens Otto Krag, the Danish Social Democratic Prime Minister, has died aged 63. He had a long ministerial career behind him when he became Prime Minister first in 1962, then in 1968.

He was succeeded by Hilary Bates, who was in Copenhagen. He returned to office again in 1971, but made a sensational exit from Danish politics when he announced his resignation on the day after the referendum taking Denmark into the Common Market, in 1972.

Steelworkers on strike in Belgium

BY MARGARET VAN HATTEM

BRUSSELS, June 22

THE TINDEMANS government plans to restructure the Belgian steel industry came under renewed attack today when workers from all but one Belgian steel plant went on strike.

The strikes show no sign of early resolution and reports indicate that white collar workers may become involved.

More than 40,000 men stayed away from work today after talks last night between management and union representatives failed to produce concessions satisfactory to most. The only exception is the Sidmar plant in Ghent, where men re-

turned to work today after their union representatives accepted a provisional deal expected to be put to the vote within a day or so.

The unions are demanding that the retirement age for steel workers be reduced to 55 from 65 (60 in exceptional circumstances) and that the working week be reduced to 38 hours in the immediate future, and ultimately to 36 from the present 40 hours.

This is their price for accepting the Government's plans for restructuring the national steel industry which, it is estimated,

will mean a loss of around 8,500 jobs.

Though talks had been underway for many weeks, there was virtually no progress until late last night when, in view of a last-minute strike threat, management representatives conceded that there might be some room for manoeuvre over the retirement age issue and offered to reduce the working week to 38 hours by the end of next year.

The offer came too late to affect today's strike, except at Sidmar, but so far, there has been no sign of its having been accepted anywhere else.

Although some industry spokesmen suggested today that the return to work at Sidmar indicates the start of a split within the unions, it is felt that this is a last-minute tactical move.

The Sidmar workers belong to the CSC, a Catholic union with a predominantly Flemish power base. But most of the country's major steel plants are in Wallonia, where the socialist FGTE union holds sway and so far there is no sign that any individual deals will be made without a better across the board offer.

No Bonn moves on tax before summit

BY OUR OWN CORRESPONDENT

BONN, June 22

THE WEST GERMAN Government will not take any decision on reform of the tax structure before the end of July, Herr Manfred Lahnstein, State Secretary at the Bonn Finance Ministry, told journalists here today.

Spelling out what has already been strongly hinted at by Chancellor Helmut Schmidt and Herr Hans Matthöfer, the Finance Minister, this meant that no decision on the matter would be taken before the world economic summit meeting here in the middle of July.

His remarks reinforce the West German Government's already insistent efforts to dispel any notion abroad that a medium-term tax reform package might be a part of Bonn's contribution towards an overall agreement at the summit on the strengthening of the world economy.

For some weeks now, Bonn has been emphasising that late July would be the earliest opportunity it could take to set overall budget targets for 1979, in which any change in the tax structure would clearly be an integral part.

German ministers also now argue that only at the end of next month will they have sufficient data on the economy during the second quarter to be able to take a view of what, if anything, ought to be done to support growth.

Last night, the coalition defeated a Christian Democratic parliamentary motion seeking a firm commitment to tax reform in 1978. That negated the unity of the Social Democrats and Free Democrats and compelled the FDP to shelve the sweeping tax reform plan they had formally approved as a party only 24 hours earlier.

The FDP has thus had to swallow Herr Schmidt's assertion that tax reforms of the kind it advocates, cutting some DM20bn of individuals' and companies' payments, are "not feasible" in the short term.

Nevertheless, Herr Schmidt has not ruled out some form of tax reform for 1980. This is likely to be an olive branch, both within Germany and abroad, that even if programme is formally presented by the Chancellor in July, Bonn's partners might be offered the assurance that it will be undertaken thereafter.

Editorial comment Page 20

Steel industry orders drop sharply again

BY GUY HAWTHIN

FRANKFURT, June 22

ORDERS FOR the West German steel industry dropped heavily from April's 1m tonnes to 886,000 tonnes.

According to the association, the statistics, which do not include figures for semi-finished products, not rolled broad strip and special steels, show that May's orders were running at 100,000 tonnes below the level of May last year, when the industry was heading for its lowest order level since the end of the Second World War.

In contrast to the trends in the domestic market, things are still rather better in third markets outside the EEC than they were last year. Although May's bookings, at 576,000 tonnes, were considerably below the March level of 700,000 tonnes, they were 8.7 per cent up on the April performance and some 180,000 tonnes ahead of bookings in May, 1977.

The industry's order book at the end of May stood at 2,674,000 tonnes — just under three months' production at the current depressed levels — and only slightly less than the April level of 2,700,000 tonnes, 3,897,000 tonnes reported at the end of April.

per cent — or 115,000 tonnes — from April's 1m tonnes to 886,000 tonnes.

Domestic industry's demand remains particularly weak and, as the bulk of the industry's production goes to German consumers, the home market remains the key to steel producers' fortunes. Orders from other EEC customers, which had improved in March, declined in April and remained at the same level in May.

Orders from countries outside the EEC, which in recent months have been relatively buoyant, showed a near 10 per cent improvement on April performance — even so bookings are well below the March figures.

The statistics, produced by the West German Iron and Steel Industry Association, show that orders for rolled steel finished products were a total of 4 per cent, or 70,000 tonnes below the April level of 1.7m tonnes. Domestic bookings fell by 11.5

Air crew standards urged for oil tankers

By Lynton McLain

DELFT, June 22

OIL TANKER crews should be subject to the same mandatory penalties and training now applied in aviation, an Exxon Oil Corporation executive said yesterday.

Mr. Ian Blackwood, manager of the marine department, Esso Europe, was speaking at the unveiling of the world's first super-tanker engine room simulator. He said that an Exxon survey had shown that the "envisable safety record" in aviation was a direct result of frequent re-examination of personnel, strict disciplinary action, effective maintenance and intensive training.

Application of similar practices to oil tankers would be highly beneficial, he said. Aviation had had a disciplined approach from the start, but it would be a tremendous problem to have this discipline and outside control imposed on seafarers. It was a problem for governments.

The highest priority had to be given to uniform and effective international standards of training, licensing and periodic re-examination of ships' officers.

Governments at the current Inter-governmental Maritime Consultative Organisation conference, however, had "an ambivalent attitude" to the introduction of the highest standards. There was a good chance that the convention would not ratify these standards, Mr. Blackwood added.

The new \$500,000 steam turbine super-tanker engine-room simulator at Delft has been paid for by Exxon in conjunction with the Netherlands industrial research organisation TNO. It provides realistic training in engine failures and malfunctions and is the first tanker engine-room simulator, although simulators already exist for supertanker manoeuvring.

You'll have to speak up!

Yes! You'll have to speak up for battery electrics. In fact, you may have to shout at the top of your voice: "Let's get rid of that noisy truck and get an electric!"

Shout loud down your cost accountant's ear too! "Electric trucks cost more to buy but they're cheaper to run because an electric truck comes with most of its fuel pre-paid for 5 years. It's an electrical energy package called a battery and charger."

Speak up for a rugged Chloride battery while you're at it. And get a Chloride engineer in the deal, to look after it. So if you want to lower the decibels on your job — speak up for electrics.

AMERICAN NEWS

New Carter concession Sho Congress on taxes

ACJUREK MARTIN, U.S. EDITOR

WASHINGTON, June 22.

*First Carter Administration appears once again to have bowed to political reality. Its original \$24.5bn tax cut and reform package ran into Congressional opposition and was pared to just under \$20bn several weeks ago as part of the attempt to narrow the budget deficit and thereby control inflation.

En addition, the Administration will not insist on inclusion in the Bill (now being drawn up by the House Ways and Means Committee) of the tax reform measures it proposed last January.

These measures, which would have generated approximately \$8bn in additional revenue, included such items as curbing tax deductions on business lunches and first class air travel. Under the agreement hammered out with the Democratic leadership, the proposals may be limited to a floor vote by the full House.

In settling on a \$15bn tax cut bill and freeing it of its relatively controversial reform

measures, the Administration appears once again to have bowed to political reality. Its original \$24.5bn tax cut and reform package ran into Congressional opposition and was pared to just under \$20bn several weeks ago as part of the attempt to narrow the budget deficit and thereby control inflation.

But since then, under the partial influence of the California tax-cutting referendum, Congress has taken off on a variety of tax tangents which have jeopardised the chances of passage of the Administration's proposals.

The most important of these is the amendment sponsored by Congressman William Steiger, the Wisconsin Republican, to reduce capital gains taxes to their pre-1968 levels. The justification for this is that it would help promote much needed capital investment.

Both the Administration and the Congressional Democratic

leadership strongly oppose the Steiger amendment on the grounds that it would be little more than a windfall for the rich. But it has attracted a lot of backing on Capitol Hill and inside the crucial Ways and Means Committee. It has become a stumbling block to any progress on the Administration's overall tax package.

The decision to reduce the Tax Bill to a simple \$15bn reduction—with probably two-thirds of the benefits going to individuals, the balance to companies—represents a big gamble.

It will almost certainly mean a host of amendments being offered on the House floor, including Mr. Steiger's, a possible rollback in higher social security taxes, plus the president's reform measures which he is, for obvious reasons, loath to abandon entirely as well as quite possibly other measures, favoured by Republicans, for progressive income tax reductions.

U.S. envoy in talks with Angola Government

By Our Own Correspondent
WASHINGTON, June 22.

A SENIOR U.S. diplomat is currently in Angola for previously-announced talks with the Government President Neto, principally on ways to ease tensions on the border with Zaïre.

Mr. Donald McHenry, who is Mr. Andrew Young's Number 2 at the U.S. mission to the United Nations and highly experienced in African affairs, will be discussing the Western plan for the transfer to majority rule in Namibia.

In his major speech on African policy on Tuesday, Mr. Carter said the Secretary of State, Mr. Cyrus Vance, had offered an unexpected olive branch to Angola when he said that the U.S. should seek to improve ties with President Neto's Government. It is understood that the decision to dispatch Mr. McHenry was actually taken over a week ago.

The overture to Angola is seen as something of a victory for Mr. Vance and the moderate Africanists in the State Department over the more hardline position associated with Dr. Brzezinski, the National Security Adviser.

Several weeks ago the Carter Administration had been embarrassed by the revelation that Admiral Stansfield Turner, head of the CIA, reportedly siding at Dr. Brzezinski's insistence, had been discreetly sounding out Congress on the possibility of providing covert U.S. assistance to the nationalist groups still fighting the Angolan regime.

However, at his news conference on May 25, President Carter publicly disavowed any intention of supplying such covert aid.

It also seems clear that over the last few weeks, Mr. Vance, one of the most respected and popular men in Washington, has regained much of the foreign policy ground it had appeared he had lost to Dr. Brzezinski, whose formidable intellectual qualities have disturbed informed opinion here as much as they have reassured it.

This week alone, Mr. Vance has carefully enunciated, with President Carter's approval, the moderate parameters of U.S. African policy, briefed Congress on policies towards the Soviet Union, and significantly toned down recent sharp rhetorical exchanges, and played a central role in Tuesday night's White House session on foreign policy for Congressional leaders.

At the White House, President Carter had made the point, accepted by many of the Congressmen present, that he consciously sought divergent opinions from his advisers before making the final decisions himself. This week at least, as the Angola initiative unfolds, Mr. Vance seems to have won the war with the President's ear, with steady and useful assistance from the ever discreet but extremely influential Secretary of Defence, Dr. Harold Brown.

Refugees bid to gain repatriation

By Jimmy Burns

LISBON, June 22.

SOME 1,500 Angolan refugees who have lived in Portugal since Angola was granted her independence in November 1975, have applied for repatriation. It was confirmed here today. According to the Portuguese High Commission for Refugees, the applications will be one of the main issues expected to be put to President Nasser at the meeting in Guinea Bissau this week-end.

Although no official agenda on the meeting has yet been published here, the subject of the Angolan refugees, in addition to the Angolan situation, is one of the two major topics for discussion. The WSLF has claimed the recapture of a strategic centre. The claim was made through Danel, the daily bulletin of the WSLF, which is published in Portuguese.

Gods has the only concrete runway in the whole of the southern Ogaden. The WSLF claims to have killed 300 Ethiopian and Cuban troops.

Today, the number of registered unemployed or those on government special relief work is 37,762 — 3.7 per cent of the labour force and almost 10,000 more than three months ago. To this must be added an unknown number of those who are not registered but who are not registered as unemployed because they do not want to be seen as unemployed.

The Government has allocated NZ\$ 35m (almost £30m) to job-creating programmes this year. These include a farm employment scheme which subsidises wages paid by farmers to hire unskilled or skilled workers for farm labour, and financial grants to local authorities to create jobs in public utilities and services. Other schemes will help manufacturers and employers to provide more work for those seeking their first job, and government help for employers to reduce the initial cost of labour for firms wanting to expand.

There are also financial grants for employers setting up training programmes to turn unemployed workers into skilled employees, and the Government has set up a training programme for school leavers. "Training such as not likely to be the hottest issue of the election and future skilled needs form

OVERSEAS NEWS

Mondale to assess Israeli flexibility

BY DAVID LENNON

MR. WALTER MONDALE, the Vice-President, is expected to clarify during his visit to Israel next week whether a new Middle East peace shuttle would be likely to produce any movement in the deadlocked Jerusalem negotiations.

Mr. Mondale is due here a week tomorrow on what was originally planned as a goodwill trip to celebrate Israel's 30th anniversary. However, the Cabinet's hard-line decision on Sunday about the future of the West Bank and Gaza Strip has given the visit considerable political significance.

The Vice-President will be accompanied by Mr. Harold Brown, the Assistant Secretary of State, and two senior White House officials, Mr. David Aaron and Dr. William Quant of the National Security Council. This team will clearly seek not only to demonstrate America's commitment to Israel but also to try to elicit some Israeli flexibility on the key Palestinian questions.

The Cabinet ruled on Sunday that its offer of limited self-rule for the Palestinians in the

Mr. Menachem Begin (left) and Mr. Walter Mondale.

occupied territories was envisaged as a permanent solution to the problem. But the U.S. had hoped that Israel meant it as only an interim solution to be followed by a more generous permanent arrangement.

Mr. Moshe Dayan, the Foreign Minister, said after the meeting that he was aware Israel's

negotiations restarted, with emphasis on Israel taking a more flexible position.

It is suspected here that Mr. Mondale may carry a blunt message from President Jimmy Carter to Mr. Menachem Begin, the Prime Minister. Depending on Israel's response to that America is expected to try one more peace shuttle, either by Mr. Cyrus Vance, the Secretary of State, or by Mr. Alfred Atherton, the roving ambassador.

Israel might prefer this to the long-threatened presentation of an American peace plan, or set of proposals as is the more euphemistic terminology. Mr. Mondale's four-day visit is being viewed as a crucial test of U.S.-Israel relations which have cooled sharply in recent months.

Officials in Jerusalem are hoping Mr. Mondale's team will speak with them. Egyptian responses to a series of Israeli questions about Cairo's position. They will stress that it is unreasonable to expect any further American understanding of the Egyptian position. But others are expecting intensified American efforts to get the

MUZOREWA ADMITS CONCERN

Slow progress on ending war

BY QUENTIN PEEL

SALISBURY, June 22.

BISHOP ABEL MUZOREWA, current chairman of the Executive Council of the Rhodesian transitional government, admitted today that the interim regime had failed to move fast enough to end the war.

In an interview with the Financial Times, he admitted that there was justifiable concern among both blacks and whites in Rhodesia at the lack of progress towards a ceasefire, but he denied that the transitional government had failed.

Bishop Muzorewa, whose United African National Council (UANC) is politically the most significant of the nationalist parties in the interim government, also insisted that he still saw no reason to attend an all-party conference with the leaders of the external Patriotic Front—Mr. Joshua Nkomo and Mr. Robert Mugabe—as proposed by Britain and the U.S.

He was speaking at a time of growing public frustration expressed by both blacks and whites in Salisbury, with the progress of the interim government headed by himself, Mr. Ian Smith, the Rev. Ndababingi Shikwe and Chief Jeremiah Chirwa.

Several Rhodesian Front MPs strongly criticised the Government in speeches in parliament yesterday, principally for its failure to achieve a ceasefire.

While black MPs attacked the lack of progress in everything except the release of detainees. Thirteen of the 16 black MPs also issued a statement calling for all the parties to get together to discuss a ceasefire.

Bishop Muzorewa blamed the lack of progress towards a ceasefire on the deep mistrust between the guerrillas and the security forces. "The guerrillas are so suspicious that this may be a trap which has been set for them," he said. "We have to go to people and reassure them."

He also claimed that there was no unified command of the guerrillas. "There is not one person who can say he can command the guerrillas to stop and everybody stops," he said.

He claimed there were at least two factions within ZIPRA, the military wing of Mr. Joshua Nkomo's Zimbabwe African People's Union (ZAPU), and three factions in ZANLA, the army of the Zimbabwe African National Union (ZANU).

"The problem is trying to track down and negotiate with them," he said. "I would deny very violently the idea that we have failed. I would accept the allegation that we have not moved fast enough. It would not be correct to say we have accomplished what we hoped to accomplish. We have not completely what we set out to do."

Bishop Muzorewa said the tran-

Japan to prepare plan for defence

For the first time since World War II, the Japanese armed forces have been ordered to prepare a comprehensive plan for the defence of the country against foreign attack, according to a Japanese Defence Agency spokesman.

The study, ordered by Mr. Shin Kanemaru, the Defence Minister, is a measure of how public opinion has swung away from its former aversion to the military following the defeat of the nation in World War II. Until now the staffs of the three armed services have never been ordered to make a comprehensive joint plan because of public opinion as expressed through parliamentary opposition parties.

Evacuation hold-up
CHINA and Vietnam squabbled over words and protocol yesterday, blocking the evacuation of ethnic Chinese from Vietnam by sea, according to information from Hanoi.

Center reports from Hong Kong, Vietnam said that the hold-up was China's fault, and accused the Chinese of deliberate delay.

Ghana appeal

Mr. J. H. Mensah, a former Ghanaian Finance Minister and one of the country's leading economists, has won an appeal in the high court against a conviction. Center reports from Accra, the Ghana News Agency said he was freed from jail last Friday after serving nearly three years of an eight year hard labour sentence. Meanwhile, the agency also reported that the Chief of the Petroleum Department, Mr. O. K. Bonsu, had been dismissed because of a temporary oil shortage which had almost halted commercial activity.

Indian home minister could split Janata

INDIA'S RULING Janata Party came close to serious division yesterday when the Central Parliamentary Board asked Mr. Raj Narain, the Union Minister, to resign a personal attack on the Party President, Mr. Chandra Shekhar—an indication that disciplinary action should be taken against Mr. Narain, writes K. K. Sharma from New Delhi. In fact, the CPB's decision is tantamount to ordering a showdown with Mr. Chandra Singh, the Minister for Home Affairs, who is behind Mr. Narain's demands for the resignation of Mr. Shekhar.

Eritrean leader visits Moscow

BEIRUT, June 22.

THE ERITREAN guerrilla leader Ahmed Nasser has paid a secret visit to Moscow amid signs of increased Soviet pressure for a negotiated end to the 17-year war of independence in Ethiopia's strategic Eritrea province. African diplomats said today.

They said that Mr. Nasser went to Moscow from Algiers in the second week of June, less than a month after a major Ethiopian offensive against Eritrean guerrillas failed to break their grip on most of the countryside and all but five towns. Mr. Nasser heads the Eritrean Liberation Front, an independence movement which has been fighting for the last 17 years. One of the two major groups fighting for the independence of the Red Sea province. East European sources said both the Soviet Union and its Cuban allies, reluctant to get involved in another African war, were trying to bring the Soviet military rulers of Ethiopia and the Eritrean guerrillas to the negotiating table.

The Russians are understood to favour a confederation between Ethiopia and Eritrea, an idea so far categorically rejected by guerrilla leaders.

John Worrall writes from Nairobi: In a sudden flareup of guerrilla activity in the Ethiopian Ogaden, the Western Somali Liberation Front (WSLF) has fought a fierce battle round Gode, the southern part of the desert territory, and claimed today to have recaptured this important town from the Ethiopian and Cuban garrison.

There has been no confirmation or comment from the Ethiopians, but it is the first time since the Ogaden war that the WSLF has claimed the recapture of a strategic centre. The claim was made through Danel, the daily bulletin of the WSLF, which is published in Somali. Gode has the only concrete runway in the whole of the southern Ogaden. The WSLF claims to have killed 300 Ethiopian and Cuban troops.

THE NEW ZEALAND ECONOMY

An end to full employment

BY DAI HATWARD IN WELLINGTON

NEW ZEALAND'S unemployed numbered dozens or, at worst, example, where large-scale unemployment has been a long-term feature, as in some countries, the Government's popularity, has heartened New Zealand's policy makers—the New Zealand Government is deeply concerned. Mr. Robert Muldoon, the Prime Minister, repeatedly referred in his budget this month to the need to reduce unemployment, and, in spelling out measures to stimulate the economy, commented frequently that they should help to create additional employment or cut unemployment.

The Government has allocated NZ\$ 35m (almost £30m) to job-creating programmes this year. These include a farm employment scheme which subsidises wages paid by farmers to hire unskilled or skilled workers for farm labour, and financial grants to local authorities to create jobs in public utilities and services. Other schemes will help manufacturers and employers to provide more work for those seeking their first job, and government help for employers to reduce the initial cost of labour for firms wanting to expand.

There are also financial grants for employers setting up training programmes to turn unemployed workers into skilled employees, and the Government has set up a training programme for school leavers. "Training such as not likely to be the hottest issue of the election and future skilled needs form

a vital part of the Government's strategy for restructuring the economy," Mr. Muldoon said. New Zealand's unemployment rate has crept slowly upwards since 1976, when the terms of the 1973 oil crisis, worsened dramatically. In two years they turned against New Zealand by 4.3 per cent. However, New Zealand business confidence was still over-optimistic as retailers and manufacturers particularly continued a much higher level of forward orders and production than the economy warranted.

There was a refusal to face the hard economic facts of life and many commercial concerns continued their former level of activity in the hope that business would again pick up in a few months. "When the crunch came in late 1977 it was much more severe than would have been the case had restraint been shown earlier."

Staff was laid off wholesale, particularly in clothing and consumer goods industries. The car industry, one of the major employers in New Zealand, where over-production was high, suffered a severe setback. Building, particularly house building, slowed almost to a standstill. The rise of unemployment was accelerated by what Mr. Muldoon calls the adjustment process necessary to return a degree of stability to the economy by a lower but sustainable level. The

rapid rise of unemployment was aggravated by a natural decrease in the labour force, a sharp turnover. With mounting unemployment, more workers are naturally less anxious to change jobs.

Now, the Government has stimulated the economy with a number of measures that it hopes will help to reduce unemployment. These include cuts to personal income tax, additional family benefits, a payment of NZ\$200 for every child, cash grants for business, a reduction of company tax to improve company liquidity at times when excessive stocks are held, and other measures all designed to put money into the economy.

The Government believes that higher disposable incomes left after income tax has been cut will stimulate consumer demand, increase production and create further employment. Measures have been released, NZ\$200m for housing and this too should help create more work in the building industry.

Some of these moves could be negated by high wage demands and increases. The Federation of Labour has already lodged an application before the arbitration court for a 14 per cent wage increase. The Government, employers and the farming industry have issued warnings that a wage increase of this size would undermine efforts to restore New Zealand's economy, and reduce unemployment.

Brazil acts to control inflation

By Diana Smith

RIO DE JANEIRO, June 22.

BRAZIL'S National Monetary Council has decreed a temporary, 30-day freeze on the conversion of foreign loans into converted from foreign currency entering the country after June 21.

This is the second time in just over six months that the authorities have frozen the conversion of foreign loans in order to hold down expansion of the means of payment and contain inflation.

The 25 per cent expansion forecast in the 1978 monetary budget is more likely to reach 35 per cent by the end of the year. Experts now dispute whether this week's measure—which will temporarily keep an estimated \$450m out of circulation—can have any lasting effect since the funds are released, their inflationary effect will be identical. The authorities have hinted, however, that this freeze could be extended beyond 30 days.

Last year, the Government temporarily froze Cruzeiro conversions of foreign loans when the amount of money in current accounts used in the hands of the public went out of control. This year's problem appears to derive more from the rapid growth of 180-day or more deposit accounts (on which the banks are not obliged to deposit 35 per cent each month in the central bank) and from an unexpected influx of foreign exchange.

Brazil has devalued the Cruzeiro for the eighth time this year, changing the exchange rate to 17.92 from 17.80 to the dollar. The new seller's rate is 18.03.

INTERNATIONAL ART THEFT

Criminal connoisseurs

BY CAROL KORZENIOWSKY IN NEW YORK

IN INTERNATIONAL crime, art theft is second only to narcotics trafficking in importance, and its incidence is growing at the rate of 25 per cent a year. The largest single number of cases—over 12,500 per year—is in the United States, and most experts agree that this figure represents only the tip of the iceberg, as many thefts go unreported. New York City, where possibly the largest collection of art objects on sale anywhere in the world is on display within a mere 20-block area, is generally recognised as a clearing house for illegitimate art, much as legitimate art dealings.

It is estimated that only some 5 per cent of all stolen art works are ever recovered. Both this fact, and the upsurge in art theft, are tied to the nature of art and developments in the legitimate art market. There are an enormous quantity of objects, worth enormous amounts of money, which are in demand by collectors. As Detective Robert Volpe, New York City Police Department's expert in art thefts explains, "with the financial situation fluctuating wildly, people have turned to art as a solid investment."

Criminal money-making patterns, he points out, always follow legitimate patterns. There has also been an increase, he adds, in making and dealing in fakes. Art objects are not only abundant and valuable, there is also a high demand for them. In general, too, the law enforcement officers called in after a crime is committed know very little about art identification—by contrast, in Europe, the number of specialised art agents in the U.S. are counted on the fingers of one hand. Meanwhile, thieves have become more professional and more knowledgeable about art, as Chicago's Federal Bureau of Investigation's Robert E. Spill points out. Stolen art not only is easy to dispose of as for instance, stolen cars, they have

to learn to do some research and careful planning. And, with the art trade being highly international, they use a co-operative international network to dispose of the objects they have stolen.

Because of the difficulties of disposal, most losses from private galleries tend to be small paintings or sculptures not of the highest value. Most losses occur during regular showing hours.

Thieves have become more professional and knowledgeable about art... They use an international network to dispose of stolen objects.

with the most recent technique being the use of groups of three thieves, to work together to distract guards. To some extent it is also true that museum losses are mainly of second-rank items, but museums are more concerned about inside jobs, losses from the enormous inventories the institutions store, do not effectively guard. Private collectors are the hardest hit outside New York City, where collectors tend to be less security-conscious.

"As Detective Volpe points out, 'the whole world seems to be a victim.' In most Western countries, it is illegal to pass title on a stolen object, irrespective of whether that object was purchased in good faith. The Arts and Artifacts Indemnity Act of 1975 provides that the federal government will pick up the insurance expenses for exhibits in public museums. This has cost \$186.7m for the first 17 museums that have taken advantage of the legislation.

Growing concern about the increase in thefts has recently precipitated concerted efforts both to make these harder, and to make it easier for prospective purchasers to identify stolen works. Thus according to Mr. Harold J. Smith, a specialist in art insurance, art galleries and auctioneers must now take steps similar to those taken by jewelry houses before they can underwrite, including the installation of buzzer doors, hold-up alarms, two-way mirrors, and television surveillance systems.

This spring, organisations to register stolen works of art and disseminate the information to interested parties have been proliferating in New York City. One may choose between the International Guide to Missing Treasures, the Annual Index of Stolen Art, supplemented by monthly newsletters, and Art Central. They offer similar services, according to one's particular background and pocket-book.

The International Guide was begun by two art dealers, Mr. Mason, a former FBI agent, who is a computer system, now in his pilot stage with the New York City Police Department, which aims to simplify the process of art identification for the specialist, and eventually make the information instantaneously available to the international law enforcement community.

Japanese TV companies in Taiwan to curb U.S. sales

BY CHARLES SMITH

TOKYO, June 22.

SUBSIDIARIES AND affiliates of Japanese companies in the Taiwan electronics industry have received official guidance to restrict their exports of colour TV sets to the U.S. it was confirmed today.

The guidance, originally issued in May, applies to companies in which Japan has a capital stake or which are using Japanese technology. Indigenous Taiwanese companies have not been subjected to the restraints but have been told that they must not use Japanese trading companies to sell their sets in the U.S.

The guidance calls on the companies concerned to keep their U.S. sales at or below last year's levels. Shipments to the U.S. in 1977 are thought to have

reached around 400,000 sets but were running at far higher levels in the early part of 1978.

In February alone, according to Matsushita Electric, one of the companies covered by the new ruling, Taiwan shipped 124,000 colour TV sets to the U.S. The bulk of these shipments probably came from companies with Japanese affiliations.

In the four months to the end of April this year, total Taiwan colour television exports to the U.S. were up 236.6 per cent on the year, at 356,500 sets.

The Taiwan action follows nearly a year after the signature of an orderly marketing agreement (OMA) between Japan and the U.S. under which Japan's colour TV exports to the U.S. are

restricted to 1.75m units per year for a three year period (expiring in August, 1980).

The restraint imposed on direct exports from Japan may have contributed to the rapid increase in shipments from Taiwan early this year. This, at least, would explain the Taiwan Government's decision to single out Japanese companies in applying its new export "guidance".

Another reason for limiting the measure to Japanese affiliated companies could be the desire to retaliate against Japanese companies which are stepping up business relations with the People's Republic of China.

Hitachi and Toshiba, both of which are deeply involved in the Taiwan electronics industry, are currently competing to win a Y20bn export order for the supply of TV tube manufacturing plant to China.

Hitachi has 100 per cent controlled Taiwan subsidiary which depends heavily on the U.S. market for colour TV sets. Toshiba has a nine per cent capital stake in Tatung Electric Corporation, a Taiwan-based company which makes sets bearing the Toshiba brand name and which also exports actively to the U.S.

The president of Tatung said recently that his company had received "no strict guidance" from the Taiwan Government on exports to U.S. This however presumably does not rule out the issue of an "informal" Government directive to the company.

Doubts in Bonn about future of fibre pact

By Rhys Davis

THE EEC pact signed by 13 leading European fibre producers earlier this week aimed at bringing capacity into line with demand now looks as though it could be running into some opposition in Germany.

Reports from Bonn suggest the German government is unhappy with the provision in the agreement setting limits on delivery by producers. The limits are intended to ensure that while capacity reductions take place market shares remain the same.

The agreement has been actively backed by the EEC Commission Industry Directorate and further talks with the Germans may now have to take place. While accepting the need for capacity reductions, the Germans will probably be arguing that limits on deliveries represent a breach of free trade. The German Government is expected to air its views in discussions next week.

If the Germans are unwilling to lift their objections, the agreement, due to come into effect from January 1, will be blocked.

Lawrence Mills, Hong Kong's Director of Trade, said after the first day of talks with EEC officials that he was confident of settling the problems still affecting Hong Kong textile exports to the EEC by today.

The problems are mainly the certificate of origin of textile products and their classification. The EEC wants to be sure Hong Kong textile products really originate there and are not made elsewhere and stamped in Hong Kong.

Robert Gibbes writes from Montreal: The Canadian Government has concluded bilateral agreements with seven foreign countries limiting imports of clothing and textile products. The countries are Hong Kong, South Korea, China, the Philippines, Taiwan, Poland and Romania.

The new restraints take effect on January 1, 1979, replacing quota agreements expiring at the end of 1978 and will last till the end of 1981, except for China, where the agreement ends at the end of 1980. The new agreements limit imports in 1979 to a level of 2 per cent more than 1975, and after that growth will be allowed to average about 3 per cent yearly. Permits will be required by Ottawa for all imports.

Saudi order for \$400m. oil pipeline

BY JAMIE BUCHAN

JEDDAH, June 22.

THE SAUDI ARABIAN Government has signed contracts worth \$400m (£220m) for the construction of a cross-country pipeline which will permit Saudi Arabia to export crude oil through the Red Sea.

Petromin, the Saudi state oil company, signed the orders with five companies for a pipeline from the Abqaiq terminal in the Ghawar oilfield to the Red Sea town of Yanbu. The 1,202-kilometre pipeline will have an initial throughput capacity of 1.85m barrels a day, designed for export via an expanded Suez Canal and the recently completed Sumed pipeline to the West to the European market. The Kingdom presently exports nearly 40 per cent of its oil to Europe.

Apart from its strategic significance in releasing the Kingdom from dependence on a single pipeline, the pipeline will also open the way for the development of Yanbu as a major centre for hydrocarbon based industry.

The awards went to five companies which will build the pipeline and 11 pumping stations. A sixth contract went to an American insurance group which will provide coverage during the construction work in very rugged conditions.

About 530 km of the buried pipeline will be built by an American-Lebanese consortium—SECO (South Eastern Engineering and Drilling Co.) of Houston and CAT, a Lebanese engineering company. The contract is worth about 380m to be built by Salpem, the oil engineering arm of the Italian national oil company, ENI, at Yanbu since last year.

The eastern half of the line is to be built by Salpem, the oil engineering arm of the Italian national oil company, ENI, at Yanbu since last year.

The power systems division of the Saudi oil minister himself, Sheikh Ahmad Zaki Yamani, has awarded a policy designed to secure supplies of Middle Eastern oil. "According to the majority of reports, the Soviet Union will shortly need to import oil," he said. "According to the majority of reports, the Soviet Union will shortly need to import oil," he said.

The insurance award was lodged with American International Underwriters. Contracts for the oil export terminal at Yanbu have not yet been awarded. The parallel natural gas liquids pipeline which will provide fuel to power the crude pipeline has been put out to tender, though again contracts have not yet been awarded. Bingham-Willamett of the U.S. has signed a contract to supply

pumps for the pipeline. Mobil Overseas Pipeline Company will be responsible for the management of construction under an agreement signed in February last year.

Actual construction is expected to begin within the next three months and the pipeline ought to be completed in 1980. Deliveries of the 48-inch pipe were secured at preferential rates and have been underway at Yanbu since last year.

While the strategic aspects of the pipeline and the Yanbu export terminal must not be overstated over the pure considerations of industrial development, the Saudi oil minister himself, Sheikh Ahmad Zaki Yamani, has awarded a policy designed to secure supplies of Middle Eastern oil. "According to the majority of reports, the Soviet Union will shortly need to import oil," he said. "According to the majority of reports, the Soviet Union will shortly need to import oil," he said.

The latest developments in the Horn of Africa may be only one step followed by others. Tankers taking off oil at Yanbu, a desecrated village some 340 km north of Jeddah, will be spared the passage of the straits of Bab el Mandeb at the southern end of the Red Sea. Saudi Arabia's dependence on the Gulf as the only outlet for its oil exports will diminish.

The sudden expenditure cut in the national budget from SR 145bn to SR 130bn, which seems to have occurred at the last minute, is an indication that there are fears in some Government circles that with the present glut on the world oil market, the Kingdom will have to scale down its ambitious development plan or be obliged to draw down foreign reserves—a move sources close to the Saudi Arabian Monetary Agency reject as utterly unthinkable, because of the uncertainty this would cause in foreign exchange markets.

It is planned that SR 115bn of the national revenue will come from oil computed on the basis of a daily production rate of 5m barrels a day—a ceiling the Kingdom had not begun to approach in the first five months of this year and it is hard to imagine it raising production levels further to flood a drowning market.

Japan's Hitachi shipbuilding and engineering company has signed a \$60m contract with Abu Dhabi's national drilling company to build three oil drilling rigs for installation in April, 1980, reports Reuter from Tokyo.

Zenith decision praised

BY ADRIAN DICKS

BONN, June 22.

THE West German Economics Minister, Count Otto Lambdorsch, today expressed his "great satisfaction" at the decision of the U.S. Supreme Court in the Zenith case, which ruled that countervailing duties on Japanese electronic equipment should not be imposed. He hoped it would serve as a precedent for the American tax courts in dealing with the pending suit brought by U.S. Steel against

European Community value-added tax rebates.

Count Lambdorsch praised the court's ruling as a strengthening of the U.S. Administration's view that rebates of indirect taxes on exported goods were not to be regarded as subsidies so long as they conformed to GATT regulations.

In this sense, said the Minister, the Supreme Court ruling was a positive contribution to the successful conclusion of the current GATT round.

Narita cargo problems 'over'

BY OUR OWN CORRESPONDENT

TOKYO, June 22.

JAPAN AIR LINES has been experiencing serious trouble with cargo handling at Narita Airport (the new Tokyo international airport). The airline also claims, however, that the "worst is over" and that cargo handling facilities have been functioning smoothly since the middle of last week.

Problems started to develop with JAL's JAL-Tos computerised cargo handling system shortly after Narita opened on May 21. The airline describes the difficulties as being both mechanical and human (in that operators apparently failed to cope with the complexity of the system when running at full capacity).

The failures resulted in cargo not being cleared in time for

flights on the scheduled departure day and having to be held over to the following day. There were also heavy losses on incoming perishable cargoes.

The JAL-Tos system, which uses a Toshiba computer to control documentation and cost mechanical handling and cost \$20m, was designed to be ready in time for Narita's originally scheduled 1973 opening date.

During the five-year waiting period before Narita actually opened last month some modifications were introduced. The modifications were designed to allow for manual intervention in the system, a need which had been identified after snags developed with earlier systems which depended wholly on computer control.

JAL apparently calculated that

the inclusion of manual control capability would enable it to avoid hold-ups or at least reduce teething troubles when JAL-Tos started to function, but this proved not to be the case.

Problems were "far worse than expected" when the first big consignments of airfreight began to pile up at Narita in the last ten days of May.

JAL coped with the emergency by despatching a special cargo handling team to Narita in late May and by setting a June 15 deadline for "normalising" the system. The airline claims that the deadline was substantially met and that today cargo handling at Narita is "marginally better" than during the final months at Haneda (the badly congested former Tokyo international airport).

Robert Gibbes writes from Montreal: The Canadian Government has concluded bilateral agreements with seven foreign countries limiting imports of clothing and textile products. The countries are Hong Kong, South Korea, China, the Philippines, Taiwan, Poland and Romania.

The new restraints take effect on January 1, 1979, replacing quota agreements expiring at the end of 1978 and will last till the end of 1981, except for China, where the agreement ends at the end of 1980. The new agreements limit imports in 1979 to a level of 2 per cent more than 1975, and after that growth will be allowed to average about 3 per cent yearly. Permits will be required by Ottawa for all imports.

Priorities now outlined for trade negotiations

BY JUREK MARTIN

WASHINGTON, June 22.

THE LEADING trading nations have put resolution of the problems of selective safeguards, considers to be an area of overriding importance.

Working parties at official level in Geneva have already begun the final process. The current intention is for the four leading Ministers, Mr. Strauss, Mr. Wilhelmsen, Mr. Nishikawa, Vice-President, Mr. Nobuhiko Ushiba, Japan's External Economic Affairs Minister, and Mr. Jake Warren, Canada's Trade Ambassador, to meet in Geneva on or about July 5 to take the final political decisions.

It now appears generally accepted that the United States will submit to Congress legislation requiring that "material injury" to a domestic industry be proved before action against competing imports is taken, thus bringing it in line with common international practice.

But in return for this, the U.S. is still hoping for foreign concessions on the subsidy code. The U.S., for example, would like to see enacted what amounts to a catalogue of various sorts of subsidies, divided into the good, bad and forbidden classes.

No specific deadline for solving the question of access for agricultural products has apparently been set. However, next Monday, Mr. Robert Strauss, the U.S. Special Trade Representative, will confer in Geneva with Mr. Finn-Olav Gundelach, the EEC Agricultural Commis-

£15m contract for tin plant

By Kenneth Gooding

THE Head Wrightson Machine Division of Davy International has won a £15m tinplate plant order for Yugoslavia in the face of competition from Japan, France and West Germany.

The Japanese price is believed to have been slightly lower, but the outcome was influenced by the fact that Head Wrightson has just brought on stream a similar electrolytic tinning line at British Steel Corporation, Ebbw Vale, which was successfully commissioned in record time.

The new plant will be the first electrolytic tinning line to be installed in Yugoslavia and will have a potential output of 150,000 tonnes a year. The plant includes coil preparation, shearing and inspection lines and will be located on the Hemjiska Industrija Zorka site at Sabac, near Belgrade.

Delivery will be in mid-1980 and commissioning in September 1981. About 85 per cent of the equipment will be UK-made, much of it from Head Wrightson machine division's Cleveland works, while the main electrical equipment will be supplied by GEC Electrical Projects, Rugby.

Plessey wins Brazil deal

By Diana Smith

RIO DE JANEIRO, June 22.

PLESSEY OF Brazil, the local subsidiary of Plessey International, has won a \$21.3m order for Sao Paulo's new area traffic control system against competition from Philips and Siemens—the largest contract of its kind in the world.

Under the terms of the agreement signed with the Sao Paulo municipality, Plessey will install 500 sets of intersection signals, controlled by three mini computers, in Sao Paulo's busiest downtown streets and most heavily used traffic lanes in other parts of the city.

The Sao Paulo municipality claims that with savings in travelling time and fuel effected by a synchronised, computer controlled traffic interception system, the project will pay for itself within seven months. The first signals will be installed later this year and work will continue for the next three years. Part of the equipment will be manufactured in Brazil, and the three mini computers will be imported from the Digital Computer Company of the U.S.

The City's new "no waiting" area.

From now on, the city can operate on today's information . . . today. Not on yesterday's news.

The reason: Data General Eclipse mini-computers have arrived on the scene. Computers that give you up-to-date information when you need it. No waiting for batched processed information.

Among the first to take advantage is Butler Till — one of the city's leading money brokers, handling deals ranging from hundreds of thousands to millions of pounds.

The Eclipse system automatically updates all relevant information on the day's activities as they proceed.

Display monitors give the dealers the information they want — when they want it.

Deals, statistics, rates and other information are typed directly into the system so that customer and market information is always up-to-date.

Dealers can forget routine administration and concentrate on the essential job of giving their clients an accurate, highly efficient broking service.

A similar system for Butler Till's sister company, Guy Butler (International) Ltd. is being developed.

"We decided how we wished to improve our services" commented Angus Crichton, Butler's Administration Manager. "We looked for a company with demonstrably proven mini-computers to assist us in achieving our objectives. We felt that Data General's overall competence suited our requirements best."

Data General has installed more than 47,000 systems world-wide. Systems that provide excellent price/performance as well as superior reliability. And everything is supported world-wide. Send for information — you too could operate on today's information . . . not yesterday's news.

Mortgage curbs 'had little effect on prices'

By Michael Cassell, Building Correspondent

GOVERNMENT restrictions on mortgage lending had "little or no effect" on house prices, according to the Incorporated Society of Valuers and Auctioneers.

A national survey of estate agents carried out by the society suggests that the restrictions might have exacerbated rather than improved the price situation.

According to the agents prices throughout the housing range continued to rise substantially until the end of last month, when the survey was undertaken. Average prices in the three months in May rose by just less than 9 per cent.

Some agents are quoted as saying that prices will rise further as the lending cuts are gradually phased out, a conclusion which contrasts sharply with this week's statement by Mr. Peter Shore, Secretary for the Environment.

He said he believed house prices were moderating.

Slight decline in May car output

Car production in May faltered slightly and for the first time this year output was below the average monthly level of last year.

The seasonally adjusted figure for May was 106,000 units, 3 per cent below the monthly average last year.

Output from March to May rose 4 per cent compared with the preceding three months, reflecting a relatively trouble-free period of industrial relations.

In the three months production for export rose 8 per cent while that for the home market was up 1 per cent.

Commercial vehicle production in May of 55,400 units (seasonally adjusted) was 7 per cent above the average monthly level last year.

General Motors plans second Ulster plant

BY ROY HODSON

GENERAL Motors is thought to be negotiating with the Northern Ireland Department of Commerce about setting up a second car components plant.

It would employ more than 1,000 in the high unemployment area of West Belfast.

Less than two weeks ago, General Motors announced plans to set up a plant at Dundonald, 10 miles south of Belfast. That £18m. project to employ 600 workers was welcomed as General Motors' first investment in Northern Ireland.

The plant now being discussed is expected to be even bigger—a £20m investment to employ, in addition to skilled workers, hundreds of people with no previous experience in engineering or the motor industry.

Beyond acknowledging that talks with the company have reached a delicate stage, the Department is refusing to give any details of the proposed Belfast development.

But it is probable that a special industrial assistance package is being negotiated by the Department of Commerce for General Motors. The Northern Ireland authorities have special latitude

to finance incoming industrial projects backed by international "blue chip" companies.

A major new industry would help restore morale in mainly Roman Catholic West Belfast, where traditional employment has been declining and where unemployment has been running more than 20 per cent at times during the last ten years of violence.

A guarded hint of the motor components project was given yesterday by Lord Melbourn, a Northern Ireland junior minister, who told teachers from West Belfast secondary schools he was optimistic that job prospects would improve in future.

General Motors may intend to site its proposed European plant to manufacture brake retarders (a device to provide engine braking on automatic vehicles) in West Belfast.

The group has been looking for a suitable location and has been giving particular attention to the UK.

If the second General Motors plant is finally secured for Northern Ireland, the Province will be in a position to celebrating a more successful period of industrial expansion

this year in the form of incoming investment than at any time since the 1930s, when the major chemical plants established themselves there.

During the last few months, Du Pont has decided to spend £30m on its Northern Ireland plant near Londonderry.

AVX Corporation, the world's biggest maker of multi-layer capacitors for the electronics industry, has embarked on a manufacturing plant for 800 jobs.

The first General Motors plant has been announced and Good-year Tyre and Rubber Company has decided to establish a £3m research and development centre at Graigavon.

A second General Motors plant in Northern Ireland would also add weight to the Province's claim to be a major European motor components centre.

Related plants include the Ford carbody factory, Michelin and Goodyear in tyres and rubber, Kent Plastics in dashboards, and Walker Tenneco in silencers.

The Northern Ireland authorities see a direct correlation between the rising interest being shown by international companies in the Province as a manufacturing centre and the decline in the number of violent incidents since 1976.

Peers back EEC ships plan

BY IAN HARGREAVES, SHIPPING CORRESPONDENT

BACKING for the EEC's attempt to produce an orderly and co-ordinated reduction of capacity within the shipbuilding industry came yesterday from a Lords select committee.

So far, the Commission's plan, based on a 46 per cent reduction in the capacity of the industry between 1975 and 1990, has made little progress. Britain has been among the most vociferous opponents of declared contraction targets.

The Lords committee on European Communities accepts that the forecast of 2.4m compensated gross tons output for the Community's shipyards in 1980 is not necessarily realistic.

But it says that contraction of the European industry is inevitable and that any attempt to sustain higher output or capacity than the market can bear "can only lead to the continuation of aids or protective measures for a considerable period of time."

This would be incompatible with the Commission's fourth directive on support measures for the shipbuilding industry and would prolong the world crises in shipbuilding and shipping.

If capacity is to be reduced, and the report points out that some contraction has been implicitly accepted by Government

policy so far—it is best to work for an orderly contraction and "reasonable to agree the order of that reduction, if not a precise figure."

The problem of allocating any cutbacks among member states is acknowledged. But the report says that if cuts have to be faced, an agreement within the Community would strengthen its position in wider international negotiations on shipbuilding capacity within the Organisation for Economic Co-operation and Development.

Shetland delay may harm oil plan

By Ray Dafter, Energy Correspondent

DELAYS in building the 2670m Sullom Voe oil terminal in the Shetland Islands may hinder Britain's attempt to reach self-sufficiency in oil by 1980.

British Petroleum, operator for the group of companies that will use Sullom Voe, said yesterday that although the terminal would be able to receive some crude oil later this year it would not be ready to receive untreated crude before about March 1980.

It hoped the terminal's treatment plant would be ready to process the crude and remove the gas content of the fuel next year.

BP said that late delivery of equipment was among reasons for the delay but the development might still be brought back to schedule.

If BP fails to make up for lost time the Government will have to either allow oil companies to separate and burn off gas in the oilfields or to hold up delivery to shore of untreated crude.

That might hamper Britain's attempts to reach energy self-sufficiency in the next 18 months, since the fields of north Sea oil and gas are among the most important in the North Sea. They include Brent, Ninian, Heather, Hutton, Cormorant, Dunlin, Thistle and Murchison.

Where suitable equipment has been installed on offshore production platforms, it will be possible to return some gas to the reservoir and thus partly overcome flaring. Such equipment is being installed, for example, in Brent, the biggest field in the North Sea.

The Department of Energy, although concerned about the fresh delays, has made no comment. However, officials have told companies that they may not assume that permission will be given for gas flaring if the treatment facilities are not ready in time.

Guilty verdict in dollar premium case

JOHN BARNES, self-styled King of Colonia, was found guilty at the Old Bailey yesterday of being concerned in a film fraud plot.

Barnes, 47, an economist and company director, who was also known as Prince John de Marveles, of Canford Cliffs, Poole, Dorset, was convicted of being concerned with others in a fraudulent scheme to obtain money from authorised currency dealers by pretending that currency they had to sell was investment currency attracting the "dollar premium".

Judge John Buzard said he would pass sentence on Barnes today, along with five others who were convicted of related offences at an earlier trial.

Mr. David Tudor Price, prosecuting, said that the plan was to gain the "dollar premium" on non-existent foreign investments. Had the fraud succeeded, the Bank of England or the British public would have lost £1m.

Barnes denied having any part in the fraud plot. He said he had become the "king of Colonia, an uninhabited group of islands in the South China Seas in which he had acquired an interest."

Barnes claimed seismological studies had shown that there was more oil under the islands than there was in the Persian Gulf. He saw a solicitor, Brian Wooding, with a view to obtaining documents relating to the North Sea oil leases and while he was with Wooding, the solicitor talked with a man known as Keith Gardiner about "dollar premium" shares.

Consumer groups product liability plans attacked

BY DAVID CHURCHILL

DISAGREEMENT BETWEEN consumer groups and employers leaders emerged yesterday over proposals to make manufacturers more liable for defective products.

Three consumer organisations, in a joint statement, called for legislation to make manufacturers strictly liable for any injury caused by faulty products, irrespective of whether or not the company was negligent in production.

Such a move already has the backing in principle of the Law Commission as well as the EEC Commission, which has produced a draft directive "advocating increased product liability."

The Confederation of British Industry yesterday made clear it felt that legislative changes which increased manufacturers' liability were unnecessary.

The Confederation also warned that more product liability would mean substantial costs for industry.

Sir John Methven, the confederation's director-general, said yesterday that the Government would have to share the costs of compensation from increased product liability.

"The State would have to carry some of the cost and it is, therefore, urgently necessary for the Government to define its policy on this issue," he said.

Sir John said that to protect themselves manufacturers would either have to take out additional insurance or set aside funds for possible compensation.

"In either case the cost must be passed on to the customers and in some industries it could be a very significant amount."

It follows that UK competitiveness in overseas markets could be reduced with consequent harmful effects on profitability and employment.

The three consumer organisations—the National Consumer Council, the Consumers' Association and the National Federation of Consumer Groups—disagreed with the confederation over the potential effects of product liability.

They argued that shop prices had not so far been substantially increased by retailers who are responsible for compensating people for defective products they buy.

"We believe that all the evidence indicates that the extra costs in the UK are not likely to prove particularly high for most industries," said Mr. Maurice Healey from the National Consumer Council.

Only about 1 per cent of the products are defective, he said, and only about 5 per cent of these cases received compensation.

The State would have to carry some of the cost and it is, therefore, urgently necessary for the Government to define its policy on this issue," he said.

Sir John said that to protect themselves manufacturers would either have to take out additional insurance or set aside funds for possible compensation.

Crown Agents managing director is new chairman

BY MARGARET REID

A FORMER merchant banker, Mr. Sidney Eburne, who has been managing director of the Crown Agents since 1976, is to become chairman of the agents' board, as chairman of the board of the Port of London Authority.

Sir John, who is also chairman of the Midland Bank and of the bank's subsidiary, the Midland Bank, will be leaving after four years as chairman of the agents.

During that time, he has presided over the agents' recovery from their £22m losses on large property involvement in secondary banking and property.

Mr. Eburne, 56, who was director of Morgan Grenfell, the City merchant bank, joined the Crown Agents as finance director in June 1976, within a year of Mr. Cuckney's arrival there and director.

Engineering orders stay at December 1977 level

BY KENNETH GOODING, INDUSTRIAL CORRESPONDENT

CONTINUING UNCERTAINTIES in large areas of the engineering industry are reflected in figures today from the Department of Industry.

At the end of the first quarter of 1978 the industry's order books were unchanged from their level in December last year.

Over the three months, new orders rose by 2 per cent while total sales were 3 per cent better than at the end of 1977.

The department notes in the magazine Trade and Industry that the volume of home orders on-hand has made no lasting improvement yet from the extended trough it entered at the beginning of 1977.

New orders for the home market faltered in the first quarter on the provisional estimate of trends in March was only marginally higher than the level in December.

The increase in the trend of new export orders during the quarter was 4 per cent, but that was partly influenced by a few large contracts in February. Seasonally adjusted figures for January and March were well

down on the average intake last year.

The high order intake for the quarter lifted export order books by between 1 and 1 per cent. According to the Engineering Employers' Federation, the outlook for the rest of the year is for continued slow recovery.

Mr. Paul Grove is joining Times Newspapers as Production Director from July 19. He is at present Deputy Director of Manpower at Mirror Group Newspapers.

Rebuilt Manx centre opens again

DOUGLASS Summerland, a rebuilt and improved centre, opened yesterday by Sir John Paul, Governor of the Isle of Man.

The original cost of the building was £1.75m, but the final figure is expected to be nearer £2.7m.

The new centre, which is a 100,000 sq ft building, is a major improvement on the old one, which was destroyed by a fire in 1964.

NEWS ANALYSIS: BP CHEMICALS—MONSANTO DEAL

Joining Continental 'big league'

THE £20M deal BP Chemicals is negotiating with Monsanto marks another step in the company's attempts to integrate its activities and so improve the economic loading on its basic, highly capital intensive, petrochemical plants.

If the deal goes through—and there is no reason to suppose it will not—BP Chemicals will gain control of the whole of Monsanto's polystyrene and expandable polystyrene business within the European Economic Community boundaries.

BP Chemicals will also acquire full ownership of Forth Chemicals, the UK styrene monomer producer in which it already has a 66 per cent share.

The gain here for BP is that it will have a guaranteed outlet for its styrene production. The deal will also put BP among the top five European producers of polystyrene. And, together with the agreement between BP and Union Carbide—announced last week, it will give the company a substantial stake in the European plastics market.

BP Chemicals has two naphtha crackers—naphtha is one of the basic products of oil refinery—and a third cracker, being built jointly with ICI, is due to come on stream at the end of this year. Naphtha is cracked into a number of fragments, one of the most important of which is ethylene. Four major polymers can be derived from ethylene—polystyrene, high and low density polyethylene and polyvinyl chloride, better known as PVC.

Forth Chemicals' plants, sited alongside BP's naphtha crackers at Grangemouth in Scotland and Baglan Bay in Wales, produce 220,000 tonnes of styrene monomer each at present.

A further 170,000 tonnes is sold to Monsanto for use in its styrene factories at Newport in South Wales and at Wingles in France. The forthcoming deal with Monsanto will mean that BP Chemicals will not be using its own outlet for almost all of its styrene monomer production and this at a time when the basic petrochemicals market is depressed.

BP will take over the entire Wingles plant and although Monsanto will retain ownership of the Newport factory, all the styrene produced there will go to BP. The company will also be acquiring Monsanto's technical services and commercial interests. As a result, BP Chemicals will have a substantial presence in the continental polystyrene market for the first time.

BP already has a production capacity of 230,000 tonnes of PVC in Wales and about 110,000 tonnes of high-density polyethylene in Scotland. Its deal with Union Carbide will put it into the low-density polyethylene field with an annual production capacity of 250,000 tonnes a year.

BP Chemicals says the fact that it will be in Europe on a wholly-owned basis and will also be producing all four of the ethylene polymers will put it into "the big league" on the

BP CHEMICALS INTERESTS			
Product	Plants	Annual Capacity	
High density polyethylene	Grangemouth	110,000 tonnes	
Low density polyethylene	Grangemouth	100,000 tonnes	
Polyvinyl chloride	Antwerp	150,000 tonnes	
Polystyrene	Baglan Bay and Barry	230,000 tonnes	
	Wingles	130,000 tonnes	
	Newport	40,000 tonnes	
	Stroud	40,000 tonnes	
Propylene	Baglan Bay and Grangemouth	500,000 tonnes	
Butadiene	Grangemouth and Baglan Bay	70,000 tonnes	

continent. It reckons the new moves will make an impression on potential customers and it says they will also bring about a change in BP's whole style and approach.

Meanwhile Monsanto will be glad to be relieved of its polystyrene business within the EEC. Monsanto is not fully integrated into basic raw materials in Europe and it believes that prospects for its polystyrene production are therefore unattractive.

It says it has been finding it economically tough to support polystyrene marketing and commercial activities when it has no styrene monomer plant or naphtha crackers in Europe.

BP's naphtha crackers in Scotland and Wales produce propylene and butadiene as well as ethylene and in these two sectors the company is not nearly so well integrated. It has a produc-

tion capacity of 500,000 tonnes of propylene—used to make polypropylene—among other things—and about 110,000 tonnes capacity of butadiene.

BP point out that ethylene is a more important naphtha fragment than propylene or butadiene but it adds that it "always has an eye on better integration and is on the lookout for acquisitions in these other two areas. Polypropylene is now the only major plastic material in which BP is not represented."

Mr. Len Burchell, BP Chemicals' managing director, has said: "We do not have the protection of a sufficient diversity of chemicals' activities which will help in providing products when other parts of our business are having a bad time." The Union Carbide and Monsanto deals are signs that BP is now making a real effort to spread its business risks.

It is generally recognised in both the commission and Department of Prices that there is little chance of switching to discretionary safeguards at this point. All that might be done is modify them.

Mr. Williams' first objection to the safeguards is that they oblige the commission to calculate an entitlement to a price increase against a set of "mechanistic rules independent of the criteria" which are supposed to provide the basis of the legislation.

Second—and this is probably the criticism which is likely to strike a sympathetic chord with those Labour MPs who want to tighten the provisions—Mr. Williams says the safeguards have influenced the options open to the commission both in deciding to investigate a company, and in the conduct of an investigation and the framing of recommendations.

What he is saying in effect is that it undermines the purpose of an investigation if, because of the safeguards, the commission can never recommend a restric-

tion in price. That is true of most of the nationalised industries whose profits are below the safeguard levels before the commission has anything to do with them.

To make matters worse for Mr. Williams the commission often does not know before it has announced a reference whether the company in question will be able to invoke the safeguard provisions. This, he says, limits the commission's ability to carry out its duty under another section of the Act, which says it has to have "regard to all matters relevant with a view to restraining prices."

In other words, the two sections of the controls are, in Mr. Williams' opinion, contradictory because an interim increase, once allowed, cannot be rolled back whatever the commission discovers during an investigation. There is no point in it considering prices if it knows it can do nothing about them.

Mr. Williams also pointed to the fact that once the old Price Code, which embodies margin control, ceases in the summer, which were the subject of joint study by the commission and the CBI.

MR. JEKYLL

Moving to Milton Keynes won't bring an instant cure.

But it will help. A new start, in a new factory, in a green and pleasant place, makes life much easier for the shopfloor and the boardroom alike.

Particularly when you consider all the other attractions of Milton Keynes.

Like factories, warehouses and offices all ready and waiting to move into.

And houses all ready and waiting, too.

Like good communications (We're just 1 mile off the M1, halfway between London and Birmingham).

And a unique combination of town and country, industry and housing, trees and fields, highways and byways.

They are all a help when it comes to preventing British industry becoming Hyde-bound.

In this version of the story, the potion that turns a rational man into a snarling wreck is a strong dose of bad environment.

Given the antiquated premises that are such a large part of the British industrial scene, managing all too often means making do.

The important is elbowed out by the urgent. Long term considerations have to play second fiddle to solving today's problems.

LABOUR NEWS

Varley declines to act on Shelton closure

BY CHRISTIAN TYLER, LABOUR EDITOR

THE GOVERNMENT has declined to intervene in the British Steel Corporation's decision to end today iron and steelmaking at Shelton, Stoke-on-Trent. Workers have campaigned for eight years to save the plant.

Mr. Eric Varley, Industry Secretary, and Mr. Gerald Kaufman, his junior Minister, yesterday morning told union leaders of the decision.

They recommended that the corporation should meet the TUC steel industry committee again but it was not clear yesterday whether that could result in a reversal of the closure decision. The Government appears to have decided that the corporation had not infringed procedures by declaring this part of the Shelton works redundant, in spite of union protests that a promise of consultation had been broken and the procedure not completed.

Iron and steelmaking will shut down today for the annual two-week holiday, and unlikely to resume after the break.

The 1,600 workers faced with redundancy will stay 90 per cent of earnings for 10 weeks,

redundancies and closures if Shelton were to cease production. He said, however, that while the corporation wanted to co-operate, there were certain areas of the country where it was difficult for it to agree to redundancies.

Mr. Varley was speaking at the official opening of a £25m development scheme at British Steel's Imperial Works at Air-drie, Scotland.

The development has doubled BSC's capacity to produce oil-well casing, a market in which its strength is increasing.

Later he visited the Chrysler plant at Linwood, where he met management and union representatives.

He told journalists that Government liability for Chrysler was "strictly limited". There was provision for losses of £7.5m this year, and £5m next year.

"But we do not expect losses," he said. "The Sunbeam and Avenger are good models, the domestic market is booming, and Chrysler, together with other UK car producers, can make headway against imported cars."

NGA will back journalists

BY ALAN PIKE, LABOUR CORRESPONDENT

THE National Graphical Association (NGA) will continue to support the fight for a closed shop in editorial departments of newspapers, delegates to the association's conference at Douglas, Isle of Man, were told yesterday.

Mr. Tony Dubbins, assistant general secretary, gave the undertaking during a speech emphasising the print union's determination to retain for its members the right to feed material into new computer-based newspaper production systems.

It was clear, Mr. Dubbins said, that no one union would be able to control new technology effectively, and it would be necessary in the long term for the NGA to enter into joint agreements with the National Union of Journalists and the National Society of Operative Printers, Graphical and Media Personnel (NATSGMP).

The absence of an NUJ closed shop when the new technology is introduced "is a danger not only to the NUJ and their ability to organise and negotiate reasonable wages and conditions for journalists, but also to the NGA and other unions in the industry also."

Provincial Building Society

Notice to Borrowing Members

Provincial Building Society hereby gives notice that the scale of interest rates applicable to its various classes of mortgage accounts is to be increased by 1.25% with effect from 1st July 1978. Where a mortgage deed specifies a period of notice before such increase is to be effective, that period will commence on 1st July 1978.

Under the Society's scheme for annually recalculating mortgage repayments no adjustment to current monthly repayments is required. The increase in interest charged during 1978 will be taken into account when calculating the new fixed monthly repayment for 1979. The revised figure will be notified in each borrower's annual statement of account.

Postal engineers broaden action

BY PHILIP BASSETT, LABOUR STAFF

POST OFFICE engineers extended their eight-month industrial action yesterday in support of a short of working week by starting an indefinite overtime ban throughout Scotland.

The action, which involves about 20,000 Scottish members of the Post Office Engineering Union, follows a walkout of 1,000 members in Dundee and Edinburgh on Wednesday after 13 men were sent home after warnings for broadening sanctions.

The 13 workers returned to work yesterday but were sent home again.

Telephone repair and installation work will not be done outside normal hours until the Post Office allows the 13 men to return to work.

A statement from the union's national executive council, after consideration of the Post Office's action, said that if men were sent home in other regions similar action was planned.

The union gave full backing to the sympathetic action by the 1,000 men. It regretted the action of the Post Office and deplored its failure to recognise the strength of feeling that exists among union members for a shorter working week.

Mr. Bryan Stanley, the union's general secretary, said that the

Fair wages claim put by company

By Philip Bassett, Labour Staff

A COMPANY will try to win a pay rise for its workers next week by a claim for a fair wages award it has lodged with the central arbitration committee.

G. W. B. Parkinson Cowan, of Brierley Hill, Dudley, which manufactures industrial boilers, wants to give its 300 workers a wage increase without falling foul of the Government's pay guidelines.

It has lodged a claim for an award under the 1946 Fair Wages Resolution, which states that workers employed on Government contracts must be paid the same rates as other workers in the same area.

The company is employed on some Government contracts, and the Fair Wages Resolution is the only pay clause under which companies can approach the arbitration committee.

The arbitration committee said that a fair wages award could be raised by an employer if it felt that it was not fulfilling the conditions of its Government contracts.

Because an employer had lodged a claim did not mean an award would be granted or indicate the level of any award.

Meeting today on Rover row

HOPES OF a settlement to the strike that has halted production at BL cars Rover plant at Solihull, rests on a meeting today between full-time union officials and shop stewards.

Efforts will be renewed to reach agreement with the 80 drivers who walked out in protest at the dismissal of a shop steward. Last night 5,000 workers at nine plants had been laid off and lost production is costing £3m a day at showroom prices.

Consultants back contract

BRITAIN'S HOSPITAL consultants yesterday voted overwhelmingly in favour of a new contract that will give them more pay for extra National Health Service work.

About 70 per cent of the 12,000 consultants who voted approved the contract, which will now go to the independent review body on doctors pay for the exact money terms of the contract to be calculated.

Plea to save docks jobs

BY NICK GARNETT, LABOUR STAFF

AN APPEAL has been made by Mr. Norman Willis, TUC deputy general secretary, to Mr. Peter Shore, the Environment Secretary, urging the Government to do all it can to save jobs within the Port of London.

Mr. Willis says the closure proposals of the new bank port would be a "massive blow" to the London dock area which has already suffered severe environmental and social damage.

The Port of London Authority is due to meet union officials in closure proposals. The authority of £50m.

Firemen reject arbitration

THE Fire Brigade Union has indicated to employers that it is not yet prepared to enter into arbitration or mediation on the dispute over proposals to introduce a 42-hour week because of

ning changes.

CMB, s.a.

EXTRACTS FROM THE DIRECTORS' REPORT TO THE ORDINARY GENERAL MEETING OF JUNE 7, 1978

CMB's results for the accounting period 1977 have been affected by the severe crisis in the sea transport industry is going through. The contraction of traffic has had an effect on the loading factor of its vessels, while receipts have also suffered from the intense competition, which stands in the way of a reasonable adaptation of rates to the effective increase in costs. Operating charges of ships flying the Belgian flag are in fact particularly high; they prove to become less and less bearable during an economic crisis.

Under these difficult conditions, the diversification programme that the Company follows since a number of years, has proved profitable; indeed, the efficiency of some services has permitted a certain extent. On the other hand, the crisis in the steel industry has not yet enabled the Company to confirm its hopes placed in the development of its fleet of bulk carriers.

CMB's fleet increased in 1977 by six units: two multi-purpose cargo ships of 20,000 dwt, three 75,000 dwt bulk carriers and a container ship for 1,500 20ft units.

The most outstanding feature of the rationalization and development policy of

CMB during the past year was the introduction of the container on several of its regular lines and their gradual integration in a door-to-door transport chain. Container services were thus inaugurated to the Persian Gulf and Algeria, whilst the use of unit loads was developed on the lines to the West African coast and between the North American seaboard and certain West African ports. On the Europe-Asia Africa run, the first cellular ships also made their appearance.

The Company has, moreover, spared no effort to further intensify the policy of cooperation it has practised since a number of years with shipping companies of new countries and, especially, with Compagnie Maritime Zaïroise and Société Ivoirienne de Transport Maritime.

For the accounting period 1977, the benefit for distribution amounts to BF150,230,258, against BF170,522,411 for the previous year, after depreciation and write offs amounting to BF791,760,518, against BF979,131,254. The net dividend for the year was fixed at BF230, against BF280.

PARLIAMENT AND POLITICS

Unilateral action promised to conserve stocks Silkin applauded for tough stance in fishing talks

BY JOHN HUNT, PARLIAMENTARY CORRESPONDENT

THE COMMONS yesterday gave full backing to Mr. John Silkin, Minister of Agriculture and Fisheries, for the tough stance he has taken this week in the EEC Council of Ministers negotiations on a Common Fisheries Policy.

Mr. Silkin told the House that in the absence of an agreement at the Luxembourg talks, Britain now intends to go ahead with unilateral measures to conserve stocks in our fishing grounds.

"Believe me, as far as I and my colleagues are concerned, there will be no delay," he declared.

He did not give a specific time-scale but, in fact, Britain will now put its conservation proposals to the EEC Commission with the hope of a decision next week. The Government is anticipating that the Commission will agree to the proposals but, if not, Mr. Silkin still intends to press ahead with them.

The measures are likely to include a ban on herring fishing off the west coast of Scotland, an enlargement of the "pout box" in the North Sea where fishing is forbidden and stricter control of the mesh sizes of nets.

In a statement to the House, Mr. Silkin said that despite the unlikelihood of the UK to be able to negotiate an agreement on a common policy, the other members of the European Community had shown readiness to depart from the positions they had adopted in January. Consequently, no progress had been made.

He confirmed that the Council of Ministers had agreed to extend for another month the reciprocal fishing arrangements in Norwegian waters, with a view to ensuring that the UK maintains its share of cod and haddock catches in that area.

But, said the Minister, the Council had failed to agree on the Commission's proposal to introduce a ban on further catches of herring off the west of Scotland despite clear evidence that this highly important stock was in danger.

As a result, the Government would have to consider recently what could be done to protect fish in that area.

For the Opposition, Mr. John Peyton, shadow Agriculture Minister, endorsed Mr. Silkin's hard line but complained that he was

not moving fast enough on conservation.

"We are in complete agreement in resisting proposals which are unacceptable, ill-founded and intrusive," said Mr. Peyton.

At the same time, there was disappointment, he said, that the Minister had not come to the House immediately prepared to put forward definite measures on conservation to be enforced at once.

Mr. Silkin reminded him that the Government had to follow the regular procedure and submit its conservation proposals to the Commission. "We will announce to the House at the earliest possible moment what conservation measures we intend to adopt," he added.

Very painful decisions had to be made. The fishing industry, including the Scottish industry, had assured him that although they would suffer from conserva-

tion, they still wanted such measures adopted. This was another argument for doing it "at the soonest."

The Minister agreed with Mr. Alick Buchanan-Smith (C, North Angus and Mearns) that the conservation measures needed to be comprehensive in their scope.

Mr. Silkin added: "We must seek the approval of the Commission first of all. But if the Commission does not give us approval, we can still go ahead."

Under the stipulated procedures, he explained, such measures must be in accordance with scientific evidence. They must be necessary and non-discriminatory.

Mr. Silkin said that the Commission's proposals for a common fisheries policy were that Germany, Denmark, France, Holland and Belgium, who contributed 30 per cent of the Community's fish resources,

would take out 70 per cent. Mr. James Johnson (Lab, Hull W) said there was deep satisfaction among MPs for the fishing ports over the firm stand Mr. Silkin has taken.

Against the callous and cynical demands of our Continental partners for so-called equal shares of stocks in our waters.

Mr. Raphael Tuck (Lab, Watford) said that the Minister deserved the congratulations of the House and country for the "superb stand" he has made in Europe. He thought it "contemptuous and derisory" that although our waters provided the majority of the Community's total fish, we should only get 30 per cent of the catch.

The exchanges ended with Mr. Hamish Watt (SNP, Banff) giving his blessings to Mr. Silkin for a fruitful journey to Norway when he goes there for fishing talks shortly.

Government lacks allies for 2½% surcharge

BY RICHARD EVANS, LOBBY EDITOR

THE GOVERNMENT faces the increasing prospect of a humiliating defeat or a climb-down over the 2½ per cent National Insurance surcharge when the Finance Bill returns to the Commons early next month.

The Conservatives have decided to vote against the surcharge, which means that defeat seems probable unless Ministers can reach a compromise with the Liberals or the Nationalists.

Liberal leaders, now having talks with the Government, insist they will oppose the 2½ per cent increase, but they might be prepared to back the Government or abstain, should the surcharge be reduced.

The Scots Nationalists, who voted with the Tories in the censure on Mr. Denis Healey, Chancellor of the Exchequer, last week, are also determined to vote against the Government when the report stage of the Finance Bill opens in the Commons on July 5 or 6.

Mr. Healey's most obvious escape route is to increase the National Insurance surcharge by 11 per cent to gain Liberal support and to make up the difference by raising tobacco or other excise duties.

On paper, he has not got the Parliamentary support to secure the 2½ per cent proposal.

In the Commons yesterday, Mr. Callaghan placed the blame for the surcharge squarely on the Conservatives because of the £500m cuts in income tax they forced through the Commons against the Government's wishes.

He invited the Tories to vote for amendments to the Finance Bill to return income-tax to its previous level. This would avoid the need to increase the surcharge.

Mrs. Margaret Thatcher, Opposition leader, had challenged the Prime Minister to say whether he was still determined "to go ahead with a 2½ per cent extra tax on jobs" when school leavers were coming on to the unemployment register in increasing numbers.

Mr. Callaghan retorted that the surcharge was only necessary because of changes to the Finance Bill, which Mrs. Thatcher supported. "It was no part of the Government's original strategy to introduce this tax at all," he said.

On whether the Government intended to go ahead with the proposal, the Prime Minister added that the Commons would debate the issue in the normal way as an amendment to the Finance Bill.

Mrs. Thatcher replied that there seemed to be some doubt as to whether the Government would go ahead. Mr. Callaghan would listen to the CBI and small businessmen who said the surcharge would hit jobs, exports and small businesses.

The Prime Minister replied: "I wish you had thought of these things before."

A way out of the dilemma was for the Opposition to vote for amendments to the Finance Bill that would return income tax to the position where it was.

Hope for improved differentials

THE PRIME MINISTER repeated yesterday his hope that future pay rounds would bring an improvement in differentials for skilled workers.

Mr. Peter Temple-Morris (C, Leominster) claimed that Phase Three had "definitely failed on differentials." He said Mr. Callaghan had let down a large

number of his own supporters whose only hope was the policies of the next Tory Government.

Mr. Callaghan replied: "I hope skilled workers won't have to wait as long as all that."

"I hope with succeeding pay rounds in yearly pay bargaining that this situation can be improved. We must recognise skill as far as possible."

Dividend control reply puzzles Tories

BY JOHN HUNT, PARLIAMENTARY CORRESPONDENT

THE PROLONGED guessing game over the future of dividend control was kept up by Mr. Michael Foot, Leader of the House, in the Commons yesterday when he came in for intensive questioning by the Conservatives.

The controls, which have been in force for nearly six years, lapse at the end of July unless the Government brings in some form of legislation to renew them.

Mrs. Margaret Thatcher, leader of the Opposition, reminded Mr. Foot that a week had passed since he was last questioned on the topic. She asked again whether the Government intended to reintroduce the controls.

The Leader of the House surprised MPs by replying: "The Government has not made a final decision on this but we don't believe it will be necessary to have fresh legislation on the matter."

Puzzled by this answer, a succession of Tory MPs tried to

probe further. Mr. Peter Hordern (C, Horsham and Crawley) asked Mr. Foot whether there was to be no legislation meant that there would be no further dividend control.

Mr. Foot retorted: "I don't believe there will be any necessity for fresh legislation. The Government is still considering the matter. But how we could make a statement to the House, I am not in a position yet to say."

Mr. John Biffen (C, Oswestry) said that Mr. Foot's earlier answer might have given an unintended impression on the matter.

He asked: "Can you confirm that without further legislation the existing controls lapse and therefore the only interpretation decision on this but we don't believe it will be necessary to have fresh legislation on the matter?"

Mr. Foot replied: "I don't think you should put any such

interpretation on the words I used. A statement will be made at the appropriate time."

A number of factors have to be carefully considered as part of the Government's general approach to counter inflation," he said.

Yet another theory was put by Mr. Kenneth Baker (C, St. Marylebone). He suggested that Mr. Foot had said that substantive legislation would not be needed to extend the controls, then the Government might be intending to do so by introducing a new clause to the Finance Bill.

The leader of the House told him: "There are various possibilities. I have nothing further to add."

The Government kept up its stonewalling tactics in reply to Mr. James Silhams (Sent Lab, South Ayrshire) who asked what restraint on dividend payments

Mr. Joel Barnett, Chief Secretary to the Treasury, said in a written answer: "None. A statement on the Government's intentions when the present powers expire on July 31 will be made at an appropriate time."

Richard Evans, Lobby Editor, writes: Ministers appear to be holding back from a final decision on dividend controls until they have further talks with the unions over counter-inflation policy in general.

A persistent theory at Westminster is that the Government might not renew the legislation after July 31, but will warn companies that excessive dividend levels out of line with counter-inflation policy would be met by Government retaliation.

The major question is whether the lapsing of the controls will be acceptable to trade union leaders when Ministers are expected to restrain wage demands over the coming year.

Minister rejects SNP attack on oil policy

BY IVOR OWEN, PARLIAMENTARY STAFF

NEGOTIATIONS are in progress to secure more contracts for the Marathon oil rig building yard on the Clyde. Mr. Gregor Mackenzie, Scottish Minister of State, told the Commons last night when he gave an optimistic assessment of the prospects for Britain's offshore supplies industry.

He rejected a Scottish National Party call for the establishment of an Oil Development Fund for Scotland and accusations of Government mismanagement of North Sea oil resources.

Mr. Mackenzie said that according to the estimates of the Glasgow-based Offshore Supplies Office, some 60 per cent of the orders for the UK sector of the North Sea are now placed in Britain.

This was a good record, said the Minister. But the aim must be to secure a still greater share of the market, not by protection or compulsion, but by constantly trying to better the performance and competitive position of our industries.

Mr. Mackenzie stressed the Government's confidence in the long-term future of the Marathon yard, based on its performance, but did not disclose any details of the further contracts now under negotiation.

It is understood, however, that these relate to projects in the Middle East and in UK waters.

The Minister contended that it was already clear that Britain's offshore supplies industry had built up the skills and the knowledge both to compete at home, where there were growing markets for inspection, maintenance and repair of installations, and also in export markets.

Mr. Gordon Wilson (SNP, Dundee E), who led the attack on the Government, alleged that the mismanagement of the oil resources, particularly the failure to establish a development fund, amounted to "one of the greatest swindles and frauds of the Scottish people of all time."

There had been a "ruthless and unscrupulous rape" of their resources.

He condemned the ineffectiveness of the petroleum revenue tax, the inadequacy of the depletion policy and the capitulation by Ministers to the giant oil companies.

Labour's propaganda before the last general election, Mr. Wilson maintained, must now have a "sick sound" to their followers in Scotland. Amid cheers from his SNP colleagues, he declared: "We are asserting the moral and legal claims of Scotland to the oil revenue."

Mr. Mackenzie accused Mr. Wilson of returning to policies which could only have the effect of separating Scotland from the management of the UK economy

as a whole. As the recent by-elections at Garscadden and Hamilton had shown, the SNP had been "rumbled" by the Scottish people. The reality of the situation was that as a result of Government policy, Scotland had benefited to a substantial degree from North Sea oil and the economic activity related to it.

Mr. Mackenzie told the House that the Government had considered the possibility of establishing a special oil fund but had decided, on balance, that the creation of artificial machinery would be the wrong approach to the country's problems.

Mr. Gordon Wilson (SNP, Dundee E), who led the attack on the Government, alleged that the mismanagement of the oil resources, particularly the failure to establish a development fund, amounted to "one of the greatest swindles and frauds of the Scottish people of all time."

There had been a "ruthless and unscrupulous rape" of their resources.

He condemned the ineffectiveness of the petroleum revenue tax, the inadequacy of the depletion policy and the capitulation by Ministers to the giant oil companies.

Labour's propaganda before the last general election, Mr. Wilson maintained, must now have a "sick sound" to their followers in Scotland. Amid cheers from his SNP colleagues, he declared: "We are asserting the moral and legal claims of Scotland to the oil revenue."

Euro-poll boundaries criticised by Liberals

By Robert Cornwell, Lobby Staff

THE LIBERALS have taken by far the most critical view among the three major parties of the new constituencies drawn up by the Boundary Commission for the first direct elections to the European Assembly next summer.

Draft proposals were issued by the Commission several weeks ago for the 70 English and Welsh seats, and complaints from the political parties and others have to be received by today. It is expected that a revised final version will be published within two or three months.

The Liberals, who are unlikely to win a single seat at the elections, which will be contested under the traditional first-past-the-post system, yesterday presented objections and alternative proposals to 46 of the 66 English seats.

With evident self-interest, they suggest that Gwent, where the party has two Westminster MPs and generally fares well, should be a separate constituency, and one clearly which they could hope to win. They also want changes in the Severn Valley, and some rearrangement of the proposed Midland seats.

"They and the Tories have some complaints about divisions in Gwent, but they are proposing to change the boundaries of some constituencies from their thorough. This affects, among others, Basset (Kitchley) the Parliamentary seat of Mrs. Margaret Thatcher, the Opposition leader."

However, unlike the Liberals, both the Tories and the Labour party are reasonably satisfied with the organisation of the Euro-seats in England and Wales, which they are expected to share exclusively between themselves.

Next week's business

COMMONS business next week will include:

FRIDAY: Debate on trade and transport; the National Employment (Continental Shift) Bill, House of Commons (Administration) Bill, Parliamentary Pensions Bill, remaining stage.

WEDNESDAY: Motion on EEC documents on contracts negotiated away from business premises; the aeronautical sector, and Criminal Law.

THURSDAY: Debate on problems of pharmacists and on MPs' secretaries and research assistants.

FRIDAY: Motion on Northern Ireland (Emergency Provisions) Act 1978 (Continuance) order and on Northern Ireland Act 1974 (Interim Period Extension) order.

New Ministry call rejected

CALLS FOR the establishment of a Department of Marine Affairs were rejected by the Welsh Nationalists.

The real future for Wales lay in the "grandiose" plans for the economy, but in small businesses that could reach to demand and provide a living, dynamic home industry, dynamic home industry, dynamic home industry.

MPs from both sides suggested changes in the way fisheries could be managed, and that they moderate their policies.

Liberals will be tougher in any future pacts

BY JOHN LLOYD

THE LIBERAL PARTY has learned a hard lesson from its "unhappy experience" of the Lib-Lab pact, according to Mr. Russell Johnston, MP, leader of the Scottish Liberal Party.

It would be much tougher in any future pact—whether with Labour or a Conservative government—than the present Lib-Lab pact.

Mr. Johnston was speaking before the opening of the Scottish Liberal Party's three-day conference in Perth. He refused to be drawn on any conditions of co-operation with the Tories on any future pact.

The conference will today hear a keynote speech from the Liberal leader, Mr. David Steel, who will debate motions on the Conservative Party, one of which "deplores the idea" that the Liberals should co-operate with Labour.

However, it is expected that this motion will be defeated in favour of one which proposes co-operation with the Tories on any future pact.

SWINDON '78

at the Institute of Directors

on 4th, 5th, 6th July 78

For three days we are presenting Swindon's advantages as a growth centre for industry and commerce at the new Institute of Directors' headquarters, 116 Pall Mall, London SW1.

Presentation open from 10.00 a.m. to 7.00 p.m. Refreshments and buffet.

If you would like to attend please telephone Mrs Ann Hull at Swindon (0793) 26161

GHH-Prospects

GHH is a leading engineering and plant construction group world-wide. Its turnover in 1976/77 was approximately £ 3,000m and orders in hand stood at £ 3,500m at the beginning of 1978 – growth resulting from the wide range of products and services. Of the 85,000 employees, 4,500 are engaged in the research and development of new products and processes. Over the past five years £ 375m has been invested in the current modernisation of its manufacturing shops. GHH welcomes opportunities to be a partner in clients' projects of basic materials and producer goods industries, the chemical industry, the energy sector, the processing and communications sectors, transport and traffic systems and for the civil engineering and building sectors. GHH plans, finances and supplies special industrial equipment and turnkey plants. It also undertakes contract research and development work for the energy sector, for space travel, materials, transport, environmental protection and the infrastructure, including logistics systems. In addition to being a producer and supplier, GHH offers a wide range of possibilities for co-operation in Africa, America, Asia, Australia and Europe.

BW Conce

One of the world's most powerful families.

Behind everything that BMW does lies the basic aim to develop and improve. Even if the 'best' has already been achieved it can always be bettered. For BMW this goes back a long way. There were the altitude record breaking aero engines of sixty years ago, then came the shaft driven motorcycles. And today, after a long and continuing career of successful motor racing, there is BMW's exclusive range of high performance

luxury cars. BMW is both unique and highly individual. We alone produce a range of exceptional cars along with what are almost certainly the best superbikes in the world.

This progression, and the use of power and imagination to improve the way and the style in which we live, is essential to BMW's philosophy. It is something we believe we share with those who own a BMW.

Leasing. In today's financial conditions leasing a BMW can create substantial advantages. Your BMW Centre will be happy to put you in touch with expert advisors on leasing who can describe the schemes in detail.

The Property Market

BY JOHN BRENNAN

A glimpse of the future

UTUROLOGISTS HAVE gained more respect since computer programs took the place of the crystal ball. But the audience at St. Martin's House last night might have preferred a hearingly fictional view of the future to the rather depressing picture of industrial decline painted by James Morrell, Director of the Henley Centre for Forecasting in his paper "The Future of the Property Markets".

Looking at property as one aspect of the economy as a whole, Mr. Morrell gave his impressions of the present and future shape of the industrial world.

In the recovery phase after the second World War the industrialised nations embarked upon a uniquely sustained period of capital expansion. Between the early 1950s and the mid-1970s as much as 25 per cent of the total output of the developed world was ploughed back into investment to the point where, in Mr. Morrell's view, "we have now reached a stage of capital saturation."

The Henley Centre is sceptical of inter-government attempts to lead the world economy out of recession in the near future. But there is no industrial renaissance on the horizon, at least the technological revolution provides some glimmer of hope.

Energy-related industries, electronics, and chemicals all receive

Mr. Morrell's seal of approval as growth sectors. And new markets opening in the developing world give him some grounds for longer-term optimism about the prospects for economic recovery. But any future expansion will, he believes, depend increasingly upon industrial efficiency. And as far as the property market is concerned, Mr. Morrell comments that "the severity of competition and the threat to survival will constitute a major incentive for industrial building investment in coming years, for the good reason that fairly predictable and substantial cost savings will be attainable."

A declining population in Britain cuts the need for a net increase in the stock of houses, schools, hospitals and roads. And Mr. Morrell believes that "lower population levels will ultimately ease the pressure on land resources" even if rising living standards result in greater demand for recreational and house space. Taking account of the fact that land prices will be influenced by the speed at which redundant buildings and land can be brought on to the market, Mr. Morrell anticipates that "land prices may rise more moderately in future in relation to other prices."

On specific sectors of the market Mr. Morrell believes that "in terms of dynamics there is little doubt that the vital sector, offering the best prospects for

growth in demand, is industrial buildings." Demand for office space, "will reflect the 'keeping up with the Joneses' law of forecasting. Today's 'best' will become tomorrow's 'Norm'." And to the discomfort of shop developers in his audience Mr. Morrell argued that "retailing

accounts for a declining share of consumers' spending. Therefore shop development offers an unexciting prospect."

Overall, he believes that there has been "a profound change in society in the 1970s." Inflation accelerated from 1968 to 1976, and in that year personal taxation also reached a peak. Now, "both inflation and the tax burden are in decline and British society is moving gradually in a direction of anti-bureaucracy, and the corporate state, anti-state welfare, and anti-bigness, which may ultimately be reflected in a more entrepreneurial society. In such an environment the gradual relaxation in inflation and interest rates is certainly plausible and presents a scenario far more favourable to the property industry than in recent years."

City in balance

FORECASTS OF a critical under-supply of City of London offices, and a consequent explosion in City rents, are dismissed by Richard Ellis in the firm's first full review of the City market for 18 months.

Ellis's City Accommodation Review, published this week, suggests that the overall supply and

Towards standard accounts

THE BRITISH Property Federation's Committee's decision last year—a decision impressed upon the committee by the leading English accounting body—to defer application of new accounting standards to property investment companies until January 1978, pending a full investigation of the industry, has been a lead given recently in the accounts of Land Securities, when the giant of the sector took the first step towards abandoning the capitalisation principle.

The BPF's report is the property industry's reaction to the

Financial Times Friday June 23 1978

some instances that it is positively misleading, when applied to property investment companies. Instead, the BPF recommends annual valuations by qualified valuers.

The BPF accepts that qualified internal valuers should be able to carry out these valuations, but it also recommends independent external valuations at least every third year.

Provisions in the new accounting standards which require realised profits and losses on sales of investment properties to be dealt with in the profit and loss account are also challenged by the BPF. It feels that as the articles of association of property companies prevent the distribution of capital surpluses to shareholders, the sector should be granted the exemptions made

by the accountants for investment trusts under which "realised and unrealised gains or losses" are shown "prominently either in the balance sheet—or in a note in the accounts."

On the thorny question of capitalisation of development interest the BPF states by the principle that "the revenue account should normally be relieved of the charge for interest and other outgoings relating to development properties." And the Federation feels that the decision whether to capitalise, directly or charge to revenue, and make a subsequent transfer from unrealised reserves should be left to the individual company. It argues that properties should cease to be treated as developments at the earliest of the date of full letting, when income exceeds outgoings, or two years after the practical completion of the building.

Copies of the proposals are available from the BPF at 35 Catherine Place, London, SW1.

AN 18-month-old question needs answering at Percy Bilton's annual meeting today. Shareholders of the industrial property group need a straightforward explanation of the reasons for the sudden retirement in December 1976 of the former managing director and deputy chairman, Bryan Turner-Samuels. Since that time a disturbing cloud of rumour and innuendo has shrouded the group's image. Veiled hints of management disputes and management succession problems which followed the octogenarian Percy Bilton's decision to take back the reins seem unfounded, and stand at odds with the group's talk of Mr. Turner-Samuels' "gross mismanagement" of Bilton's housing division. Today's AGM provides a forum for a full airing of the matter and an opportunity to kill the rumours once and for all.

One of the best distribution centres in the South
West where the company you will keep will be
Woolworths, BOC Transfield, Nat West Bank, GEC
Osram, C & A Modes, and many other famous names
on the existing Patchway Trading Estate.
Your connections are guaranteed, being situated
only three quarters of a mile from the Bristol City
boundary and close to the M4 and M5 motorway
interchanges.

Construction
All units are constructed to a high specification
with 22 ft. eaves height, 700 lb per square foot floor
loading, 16 ft. x 20 ft. steel sliding doors and ancillary
offices. Further information, from the joint agents.

Agents on the takeover trail

COMPETITION FOR prime shops is forcing surveyors into the takeover business. And the agents for both Harris Carpets and the Owen Owen department store group have just lined up their clients' search for additional shops.

In a £2.3m deal, Owen Owen, advised by Conrad Ribbitt, has bought Suters Limited, a family company with stores in Slough and Uxbridge. The Liverpool-based retailer paid cash and unsecured debentures for Suters, and takes over a 60,000 sq ft store by St Martin's Queensmere Shopping Centre in Slough's High Street, and a 30,000 sq ft unit in the pedestrianised section of Uxbridge's High Street opposite Town and City's shopping centre.

Harris Carpets' takeover gives the group its first Scottish outlets. Harris, advised by Smith Melzak, has resolved an 18 month search for Scottish shops by acquiring J. Ross and Company (Carpets). Harris paid £450,000 for the company and has taken responsibility for debts which take the total cost of the purchase to around £1m.

J. Ross has 26 shops in Scotland which will continue to trade under that name—and a further 5 in the North West—which will come under the Harris banner.

A 5.7 PER CENT initial yield on the British Broadcasting

Authority's £14.2m purchase of the 145,500 square foot, St. Catherine's House office block in Kingsway, WC2, looks like another indication of fund manager's judgment bowing under the weight of investable funds. But it isn't. That yield, based on the Department of the Environment's average rent of £5.75 a square foot, looks ahead to a full rent review next March and to further five yearly reviews until the end of the present lease in 1999.

On that basis the purchase, from a Brandt-led banking consortium through Jones Lang Wootton makes considerably more actuarial sense. Knight, Frank and Rutley acted for the BBC fund.

IBM HAS paid around £3 a square foot for 58,260 square feet of Commercial Union Properties' recently completed 147,000 square foot office development at 54, Hagley Road, Birmingham. This first letting just below the initial £3.25 asking rent, leaves joint agents Jones Lang Wootton and Edward Bigwood and Bewley with the scheme's 88,978 square foot, 17-storey tower to market. Weatherall Green and Smith and Ralphs and James advised the computer group.

HASLEMERE ESTATES and Friends Provident Life Office have now let their 18,000 sq ft Spacer House refurbishment on Wilson Street, EC3 to BP Trading for around £6.60 a sq ft. BP was advised by Knight Frank and Rutley, and Richard Ellis acted for the refurbishers.

Trevor Humphries

Grand Metropolitan will unveil the results of its £1m conversion of The Ritz Hotel's former Grill Room and downstairs bar with the opening of the Ritz Casino next Wednesday.

Grand Met has set up a separate subsidiary to operate the casino, and has negotiated a 21-year lease on the space from the hotel's owners, Trafalgar House.

Trafalgar, which paid just £2.75m for the hotel in 1976, and which is reported to have

ignored countless higher offers since then will now have the Casino trade to further bolster interest in the four shops it has built into the hotel's Piccadilly colonnade.

Letting agents Healey and Baker have signed up tenants for two of the four 500 sq ft units at "Bond Street rents" when shops of that size can cost around £50 a sq foot.

EDITED BY ARTHUR BENNETT AND TED SCHOETERS

SERVICES

Guides would-be micro users

WITH MAJOR interest, both industrial and political, focused at the moment on the microprocessor and the intricate memory chips which serve it, the Electrical Research Association is seeking to draw attention to the protracted study it has been carrying out on behalf of some 50 sponsoring companies on what it takes, from the user side, to make sure a microprocessor application will work.

Two sections out of the five-part study, which began nine months ago, are completed. They cover the economics of developing systems and a study of development systems, with an analysis of available software to come.

This will be followed by examination of the integration of hardware and software, a study of quality assurance as applied to outgoing systems and software and an examination of what designers could come up against in the field—high current spikes, excessive heat and excessive moisture, inter alia.

Completion is scheduled for a further three months and additional sponsors can gain access to the wealth of documentation arising from the ERA work for a £1,000 entrance fee. This may seem high, but it is a little known fact that development costs on a system built around a micro intended to replace existing discrete logic can run as high as £40,000 simply because the cost of producing the special software demanded for efficient micro operation is much higher than for minis.

And it must be said that since industrial and political focus there are still not enough training facilities to enable engineers to move over to micros, there is a risk that development could go down the wrong path. Interestingly, ERA researchers have found that a micro solution can pay off even in such low numbers as 100-off. They have examined the options of custom-designed logic, uncommitted logic arrays, hardwired logic, programmable logic etc., compared with using the micro and the conclusions of this chapter will be of considerable value to any production manager who has a number of difficult decisions to make in this area.

ERA wants to continue its work, particularly along the lines of what forms of support might be provided for users of micro-based products.

ERA research staff see the present concern with large scale inevitable since the more powerful the memory, the easier it is to program and operate the micro. And they are not alone in this. A micro-based cash dispenser for Scandinavian banking, a micro-based terminal for a Spanish engineering group to be used in supervision of high voltage networks and a micro-based information retrieval unit for a UK peripherals company.

Further details of the ERA study from Cleeve Road, Leatherhead, Surrey KT22 7SA. Leatherhead 74151.

TEXTILES

Non-crease linen

LINEN is a comfortable fabric, but it is generally quick to crease and hard to iron. To put this ancient natural fibre back on the same footing as the easy-care man-made fibres has taken years of work. But now, Linetrend says it has found the key process to do this.

This process, developed by the company's managing director, Dr. F. R. W. Sloan, can give a pure linen fabric the same wet crease resistance as polyester fabric. The treated fabric creases only marginally in washing and yet retains all the absorption and coolness properties which are the hallmark of linen.

The explanation of how the process works lies in complex organic chemistry—what it does is to create extra links between the long cellulose molecular chains in linen, but without embrittling the fibre as other processes in the past have done or tended to do. They thus never really suitable for treating lightweight summer fabrics because of the lowering of abrasion resistance this would entail.

Linetrend, which is launching the fabrics under the name of "Elite", is providing two weights—154 and 174 grams per square metre, 91.5 and 114 cm wide respectively. This 41 ounce 36 inch, and 5 ounce 45 inch. Ten colours are offered and first crease sampling is already under way in the U.S. for spring 1979.

The Linen Industry Research Association of Lambeth, Northern Ireland, has made an independent evaluation of the process and will be responsible for setting up quality control standards.

For data on the process and the product, Dr. F. R. W. Sloan is on 01-629 1618 at Linetrend, 55A, Duke Street, London W.1.

OFFICE EQUIPMENT

Control by microphone

MICROPHONE station equipment that provides remote access to cassette desktop dictation systems has been called a "Thought Station" by Dictaphone and is an executive feature enabled by a hand microphone and cradle, including a playback speaker.

The microphone remotely controls every dictation function—recording, fast forward, reverse scanning and electronic indexing. Indexing allows the author to record subsonic tones on the tape to indicate the number and length of dictated documents. It also permits the user to leave special instructions for the transcriptionist.

Electronic signals also warn the author when approaching the end of a cassette or when there is no cassette in the recorder. A record/lock feature enables the microphone to be used for conference recording.

Thought Station is compatible with Dictaphone's Thought Master Models 255 and 250 dictating machines and can be connected to a recorder up to 50 feet away.

Dictaphone Corporation, 120 Old Post Road, Rye, New York 10580.

INSTRUMENTS

Analysers meet many needs

Feeding commands to the new spectrometer through a keyboard.

WORLD LAUNCH takes place today of a complex piece of analytical equipment employing the latest technologies but aimed by its originator, Philips company, at a much wider range of companies than earlier machines of this type. Even small industrial organisations will be able to use the new up. This provides a very close match of a large number of requirements.

Improved counting electronics, fast-acting vacuum system, and a new continuous-feed sample system give high measuring speeds and sample throughput. Internal temperature control permits the equipment to be used in laboratories where there is no air conditioning.

To simplify the incorporation of the equipment into existing laboratories or production lines, the company is providing a universal interface so that the user's own computer can be connected immediately without problems.

At the same time, full software support is provided on the machine for Digital Equipment Corporation and Philips minis. If users wish, they can reduce output to the point where they obtain a basic printout of intensities through a programmable calculator connected to the 1400.

At the other end of the spectrum, the machine can be linked into a company's central computer if so required.

Though the 1400 has been designed with the metal-producing and processing industries in mind, it is also ideally suited for mining operations, ceramics and general industrial applications, including such things as the determination of wear metal in lubricants.

Marketing and support of the equipment in Britain is by Pye Unicam, York Street, Cambridge, CB2 3RQ.

COMPUTING

Automated cashier

NCR HAS a low-cost electronic terminal function to the specific requirements of the financial institutions, which can be entered using the terminal keyboard. If the cashier's windows, including the printing of passbooks, ledger cards, and other inserted documents.

Microprocessor-based NCR 225 can operate as a free-standing system or can be upgraded for on-line communications and data capture capabilities at a later date.

Programs, which tailor the

Speeds the blue pencil

OFF-LINE EDITING and key-boarding and applications where it is either impossible or impractical to interrupt typesetting output, is the purpose of an editing terminal by Itek.

A screen displays keyboard or tape cassette input and job parameters. By simply pressing a button the operator can scroll through an 8,000 character file, displaying up to 15 lines of text at a time and making editing or additional input decision at will.

This means that any section of a job can be selected and viewed with a speed normally associated only with flexible disc storage. Unlike some disc systems, however, the Quadric editing terminal, working from magnetic tape cassettes, allows jobs to be duplicated without re-entry.

A search and revise capability enables the operator to direct the terminal to search for data requiring change and correction. The change and correction is inserted automatically without any further instruction from the operator.

By establishing and storing formats the terminal allows text to be arranged automatically in any desired layout—important where columnar or other difficult formats are concerned.

Itek Graphic Products (UK), Itek House, Mora Street, London EC1V 8BT. 01-253 3080.

More power provided

ATKINS ON-LINE is the new name chosen for the organisation resulting from the recent merger of Atkins Computing Services with On-Line Systems Inc., a U.S. computer service bureau based at Pittsburgh. Atkins Computing Services was previously part of the W. S. Atkins Group.

One of the first extensions of services will take place very shortly when the Atkins On-Line network joins up by satellite to Pittsburgh, allowing users to gain access to the Pittsburgh computer complex from fifteen locations in the UK and Holland.

The combination of Atkins On-Line and On-Line Systems Inc., in terms of resources and networks, provides a complex of more than 20 computers and an array of communications units as well as a network operating throughout the U.S., the UK and in Canada and Holland.

The UK and will gain a great deal of power when delivery is taken in early 1979 of the first two 256K word DEC system 10's. These will be based at Epsom in addition to the two Sigma 9's, the first DEC 10 becoming operational during the first quarter.

The DEC 10's will enable Atkins On-Line to provide a wider range of software as well as being a vehicle for the development of engineering and operating systems software for the U.S. market. Simultaneously they will also be instrumental in the introduction to the UK and Europe of the management information systems currently being sold in the U.S. by On-Line Systems Inc.

More from Atkins On-Line at Fourmost House, 12, West Street, Epsom. 03727 29678.

ELECTRONICS

Micros come down

PRICE reductions of about 30 per cent, and in some cases 50 per cent, have been announced by Fairchild for its F6800 range of microprocessor products.

The company states that the reductions are the direct result of the major investment it has made at its manufacturing plants at South San Jose in California. The new facilities include computer-controlled projection alignment, use of four-inch wafers, and ion implantation; production yields have been "well above" original expectations.

Examples of the new prices at the one to two dozen level are: \$6.77 for the CPU and \$3.28 for the F6810P random access memory.

More from the company on Potters Bar 51111.

Analysers war heats up

ADDING itself to the half dozen or so companies already offering logic analysers in the UK, EH International of California says that it is spreading its wings because by 1980 the market for such products will have jumped from \$50m this year to \$85m.

Accordingly, it is offering its products through Microsystems Services of High Wycombe in a price bracket spanning \$3,000 to \$8,000.

A major battle is brewing according to EH, for the increased market for analysers that will result from the diminishing use of oscilloscopes by the data processing hardware fraternity and the need for quick and convenient means of testing microprocessors. Before long, says the company, 30 per cent of the \$800m oscilloscope market will be replaced by logic analysers.

One of the company's main products is the model 1800, which can deal with 15 channels at 50 MHz, giving it more scope than many testers already offered.

It can be set to trigger on an external event and then capture the data that led up to or followed that event. Once captured the data is read back in hexadecimal or octal form, as a domain diagram, or in a map.

Up to 512 15 bit words can be acquired and the triaser can be generated the first time the trigger event has occurred or up to 10,000 times after. Additionally

KGEL LTD
Kennedy Tower,
St. Chads Queensway,
Birmingham B4 6EL

the conversion unit can easily be fitted into any current production vehicle by adding a special gas/air mixer to the existing carburettor and installing a gas storage tank with separate pressure lines, a regulator, and fuel selector switch. No modification to the actual engine is necessary and the conversion unit can easily be removed and refitted when fleet cars or vans are changed.

Since the system operates on pressurised natural gas, an essential extra is a compressor installation linked to the mains gas supply. This can operate in two ways—either as a direct feed line system where a number of vehicles can be connected and filled directly, or as a method of charging reservoir storage tanks which can supply the gas already pressurised.

The running costs of operating on natural gas have been carefully analysed by American operators who claim that a typical 28-van delivery fleet would provide a payback on investment in two years, with a subsequent 50 per cent saving in running costs.

Further from International Gas Apparatus, Gledhill Road, Camberley, Surrey (0276 20036).

● **MINIATURE** television lines for microprocessors are announced by Mullard measuring only 37 x 7.5 x 28.5 mm. They are designated DL700. 01-580 8633.

● **Intel** has a refresh memory unit giving four bit resolution picture elements for faster scan rates. More on 0565 771431.

● **AMI Microsystems** has introduced two fully static 4096 bit random access memories for microprocessor applications, designated S2114. More on 0793 31345.

● **Low-pass and band-pass filters** fabricated using charge transfer ("bucket brigade") techniques, made by Reticon in the U.S. are being supplied by Herbert Sigma of Letchworth. More on 04826 3541.

● **Siemens** is offering light emitting diodes of only 1 mm diameter having high luminosity but low current consumption. 08327 85691.

LIGHTING

Lighting a small area

MADE TO be installed speedily in any restricted space where a wide spread of illumination is required is a fitting called SKW Skelton Strip from Linolite, Pier Road, Feltham, Middlesex TW14 0TW (01-890 81421).

A choice of pull-cord or push button switching is offered and the white lampholders are mounted on a ready-wired aluminium spine. It comprises a three-way terminal block to reduce wiring time to a minimum, a cable clamp, and a "universal" switching unit. Installation is by two fixing screws and it is available in four sizes to accommodate both 221 mm and 284 mm strip lamps in single and double lamp lengths.

TRANSPORT

Driving on North Sea gas

A DUAL fuel conversion unit designed to permit a vehicle to run on either natural gas or petrol has been fitted to over 30,000 vehicles in the U.S. and proved to be a viable system, says International Gas Apparatus, who is to make it available in the UK on the conclusion of an agreement with the manufacturers, Dual Fuel Systems of America. Designed specifically for use by fleet owners and operators,

Expansion needs Confidence. Success brings Confidence. Proof: Our Record of Achievement

1977 was another successful year for the Landesbank Rheinland-Pfalz. Despite very difficult economic conditions, expansion continued – a good reason why more and more people put their trust in us. As one of the large West-German banks we present last year's financial highlights.

TODAY IN CWMBRAN NEW TOWN

- ★ New leasehold factories and serviced sites are ready NOW.
- ★ Government grants are available and substantial rent concessions may apply.
- ★ New motorways, fast trunk roads, High Speed Trains and modern docks link you with all your suppliers and markets.
- ★ New Town housing availability.

Cwmbran is one of Britain's most successful industrial developments – little more than 2 hours from London by M4 or 1 1/2 hours by High Speed Train and 1 1/2 hours from Birmingham by rail or motorway. Cwmbran Development Corporation has already built and let more than 120 factories, and the current building programme provides a wide choice of modern, leasehold industrial premises in 1978. Fully serviced, leasehold sites are also available. We have 45,000 people, excellent housing, schools and amenities, thriving industry, and a splendid shopping centre – a magnet for the region. Get the facts about industrial opportunities and Government grants at Cwmbran. House, and be provided for all workers in new industry, and the key men who come with you initially will be housed immediately.

Please write, phone or use the coupon TODAY.

The Management Page

EDITED BY CHRISTOPHER LORENZ

Veba, the Dusseldorf-based energy group, last week unveiled a £210m deal with British Petroleum. Its chairman disclosed his strategy to Jonathan Carr.

The power of BP's German partner

Germany's leading energy strategist

UNTIL last Friday when Veba announced a £210m deal with BP, this giant West German group was relatively unknown outside its own country. And even in Germany there still remains the impression that Veba is principally an oil concern.

But oil is only part of the story — and as far as Veba profits are concerned, a singularly unhappy part. Veba is a group active in almost every energy-related field — with a sizeable interest in hollow glass as well. Through the BP agreement, the Veba management has pulled off a coup chiefly in the oil sector which alters the company's structure and should greatly improve its long-term prospects.

Inauspicious

But Veba had a somewhat inauspicious start. It was founded as "Verenigte Elektrizitäts- und Bergwerks AG" in Berlin in 1929 to act as a holding company for the Prussian government's industrial interests. That was the year of the "great crash," and the joke then was that Veba was formed largely because the government needed a way of paying the salaries of some of its civil servants.

Today the Federal German Government has 43.7 per cent of Veba stock — making it much the biggest single shareholder. But few joke about the company's role any more. It is fair to describe it as the nucleus around which West Germany's energy plans revolve and through which some of them come to fruition. This is no laughing matter in a country with few indigenous energy resources, and where a vociferous internal opposition to nuclear power has recently developed.

Last year Veba's group sales totalled DM27.1bn, making it much the biggest company in the country in turnover terms.

BREAKDOWN OF VEBE'S GROUP SALES

	1976	1977	Change
(DMm)	(Provisional)		per cent
PRODUCTION			
Electricity	4,820.3	5,071.1	+ 5.2
Crude oil, natural gas, and chemicals	10,025.1	9,461.1	- 5.6
Hollow glass	470.5	466.1	- 0.9
Other	307.5	322.8	+ 4.9
PRODUCTION TOTAL	15,463.4	15,561.1	+ 0.7
SERVICES			
Trading	10,065.7	9,970.8	- 0.9
Transportation	1,296.0	1,366.3	+ 5.4
Other	203.9	160.8	- 21.1
SERVICES TOTAL	11,565.6	11,497.9	- 0.6
TOTAL SALES	27,229.0	27,059.0	- 0.6

And of that total, DM11.5bn, or more than 40 per cent, came from services, chiefly trading and transport. In that sector the key Veba holdings are Hugo Stinnes AG of Mülheim, acquired by Veba in 1965, and Raab Karcher of Essen, which was owned by Gelsenberg and came to Veba in 1975 as part of a controversial merger. The two together control a substantial inland waterways fleet and warehousing companies. They also trade in coal, fuel oil, petrol, steel, chemicals and fertilisers and their activities to some extent parallel one another. It is not then so surprising that this was one of the aspects of the controversial Veba-Gelsenberg merger — a move which was to create an internationally competitive German oil company — which attracted the attention of the German Monopolies Commission. Nor is it surprising that Veba is relinquishing part of the Stinnes empire in the deal.

Apart from services, Veba sales from production last year totalled DM15.8bn, of which about one-third came from electricity supplies. Although the sales figures might seem to belie it, electricity was, and is likely to remain, the core of Veba's activity. It accounts for the biggest single slice of Veba's profit and roughly 70 per cent of its investment expenditure.

The main Veba holdings here are the Preussenelektra concern with its associates and subsidiaries, serving an area of North and Central Germany with a population of about 12m, and the Veba Kraftwerke Ruhr, which is a major supplier for the Rhine and Ruhr region. In all, the Veba group accounts for about 15 per cent of West Germany's electricity output. Roughly 17 per cent of Veba's electricity is generated in nuclear power plants, a much higher percentage than the national average. If German opposition to nuclear energy can be reduced, and there have been some moderately encouraging signs of this over the last nine months, then Veba stands to gain. It is also worth noting that Preussenelektra has a particularly high proportion of tariff-rate customers, that is clients whose electricity consumption is above the national average. Prospects for strong growth are therefore good.

But the gloom starts with that sector of Veba activities which embraces crude oil/natural gas and chemicals — together accounting for sales of DM9.7bn last year (including mineral oil tax). It is here (and to a much lesser extent in the glass sector) that the main reason for the 66 per cent drop in group profit to DM77m is to be found.

The contribution of chemicals to profits dropped for those reasons familiar to the industry throughout Europe — low sales of organic chemicals, over-supply of plastic, and reduced earnings from fibres. Against that must be set relatively buoyant sales of inorganic chemicals and the satisfactory use of capacity. And Veba is optimistic about the long-term trend.

FINANCIAL RESULTS

(DM m)	1976	1977*

	210	172
TOTAL	1,833	1,529
* 1977 results are provisional.		

* 1977 results are provisional.

Veba had three medium term objectives for its oil sector. It wanted to strengthen its crude oil position by obtaining two thirds of its needs either from its own production sources or from long-term contracts at competitive prices. It planned to cut back surplus refinery capacity while concentrating on the processing of refinery products. And it aimed to step up its activity not only in petrochemicals but in the chemical sector generally. The BP deal was not the start of these efforts but it has carried Veba considerably further along its chosen path.

Setback

The biggest setback came in the crude oil sector where losses are described as similar to those of the disastrous year of 1975. This happened despite the marked weakening of the dollar which cut Veba's oil import bill. West Germany's consumption of crude oil fell, there were fewer opportunities for petroleum products — and Veba's refineries were working only to 86 per cent of capacity against 71 per cent in 1976.

It might well be asked therefore whether the creation of a German oil group via the Veba-Gelsenberg marriage was not so much a milestone as a millstone. Was it for this that the two companies merged to become, among other things, the biggest single refiner in Germany (just under 20 per cent of the market) and majority shareholder (56 per cent) of Aral, much the largest petrol station network in the country? The answer is not that the

merger should not have taken place but that it would have been better had it done so sooner. Had it been up to the executive chairman of Veba only, Rudolf von Bennigsen-Foerder, it would have done so. Restructuring would have been far easier before the oil crisis. But the whole merger process took time and argument. It finally went through in the exceptionally difficult market conditions of 1975. It was hard to see whether the merger provided opportunities for rationalisation but also bargaining counters for the future. In retrospect it is easier to see that in the wake of the accord with BP.

Veba has had three medium term objectives for its oil sector. It wanted to strengthen its crude oil position by obtaining two thirds of its needs either from its own production sources or from long-term contracts at competitive prices. It planned to cut back surplus refinery capacity while concentrating on the processing of refinery products. And it aimed to step up its activity not only in petrochemicals but in the chemical sector generally. The BP deal was not the start of these efforts but it has carried Veba considerably further along its chosen path.

Veba already has partial access to North Sea oil via its 54 per cent stake in the exploration company, Deminex, which itself has an interest of more than 40 per cent in North Sea's Thistle field. Now under the new agreement, BP promises to supply Veba with 3m tonnes of crude annually at competitive prices up to the year 2000.

This takes Veba more than half way to its target of 11m to 12m tonnes annually — two-thirds of the amount required to feed its refineries once the accord with BP takes effect. Under the agreement, Veba is selling to BP holdings in refineries in Bavaria and Baden Württemberg, thus cutting back its refinery capacity by 5.3m tonnes to 18.8m tonnes a year. Veba expects its use of refinery capacity to rise to an average 85 per cent.

With the DM 800m received from BP for the refinery and other interests, Veba will be able to intensify not only its own

search for more crude oil but also its activities in the chemical sector. It has recently taken a big step in this direction with the first stage of its acquisition of Bayer's stake in Chemische Werke Huels, one of the country's biggest chemical concerns. Veba now has 62 per cent of the Huels stock and will take the remaining Bayer stake at the end of the next year. Thus in the medium term Veba is building up a comprehensive chemical base, with big sales outlets and refinery output tailored to its needs. By selling to BP both Stinnes-Stromeyer Brennstoffhandel and (if final details are ironed out) the Stinnes Fanal company, Veba is losing a big fuel trading organisation and around 1,000 Fanal petrol stations around the country. Veba's market share of light heating oil will drop from 22 to 15 per cent and of heavy heating oil from 25 to 15 per cent. Competition authorities, who will scrutinise carefully the deal as a whole, will surely have reason to applaud the Stinnes transaction. Meanwhile the entire trading operation of Raab Karcher remains at Veba's disposal.

Mr. von Bennigsen-Foerder knows a lot about the relationship between government and industry from the inside. He was born in 1926 in Berlin (three years before Veba was founded in the same city), studied law in Germany and Switzerland and entered the Finance Ministry in Bonn in 1957. His special field was legal aspects of government holdings in industry — experience which stood him in good stead when he went to Veba in 1959. He became chairman in 1971 — and thus has guided the group through some of its toughest years, through the merger with Gelsenberg, the cartel problems associated with it and the oil crisis.

His main experience has thus been on the legal and financial side — not directly on energy. Yet he has a clear concept not only of where the European oil industry should go but what its relationship should be to other energy sources.

For years he has been urging closer co-operation between the European oil companies — not West Germany's leading energy concern and Europe's leading oil producing nation are natural partners. Beyond that there are close personal relations between the members of the Veba board German oil sector to be in a move away from simple refined products and towards a higher degree of conversion — more sophisticated products coming from the most modern technology. The BP deal helps Veba do just that. In his view this not only makes sense because the oil-producing countries will soon be insisting that they will only sell crude oil along with products they have refined themselves. He also sees it as part of an effective development policy, a division of labour under which the Europeans move up to higher technology and the OPEC states develop their refinery industry.

This might seem to make for a difficult relationship with the British. Indeed Britain as a developed industrial nation and an oil producer, occupies a special position. But even Britain's insistence that Deminex (in which Veba holds 54 per cent) must land 50 per cent of its oil from the Thistle field in Britain does not seem to have unduly upset Veba. On the contrary, there seems to be an appreciative recognition that Deminex has actually been treated rather better than some other interests.

RUDOLF VON BENNINGSEN-FOERDER could well be described as West Germany's leading energy strategist. Certainly his interests go far beyond the restructuring of Veba, the energy group of which he is executive chairman. The new accord with BP, which he was instrumental in carrying through on the German side, fits well into the strategy — but it is only part of it.

It could be suggested that strategy in so crucial a field must come initially from the Federal Government in Bonn. Besides the government has a stake of 43.7 per cent in Veba — much the biggest single shareholding — and has representatives on the supervisory board. This is true, but it would be wrong to suppose that the Government simply proposes and Veba obeys. It can just as well be argued that Veba's own energy schemes feed more easily into government policy because of the close ties between the two sides.

Mr. von Bennigsen-Foerder knows a lot about the relationship between government and industry from the inside. He was born in 1926 in Berlin (three years before Veba was founded in the same city), studied law in Germany and Switzerland and entered the Finance Ministry in Bonn in 1957. His special field was legal aspects of government holdings in industry — experience which stood him in good stead when he went to Veba in 1959. He became chairman in 1971 — and thus has guided the group through some of its toughest years, through the merger with Gelsenberg, the cartel problems associated with it and the oil crisis.

His main experience has thus been on the legal and financial side — not directly on energy. Yet he has a clear concept not only of where the European oil industry should go but what its relationship should be to other energy sources.

For years he has been urging closer co-operation between the European oil companies — not West Germany's leading energy concern and Europe's leading oil producing nation are natural partners. Beyond that there are close personal relations between the members of the Veba board German oil sector to be in a move away from simple refined products and towards a higher degree of conversion — more sophisticated products coming from the most modern technology. On the contrary, there seems to be an appreciative recognition that Deminex has actually been treated rather better than some other interests.

In fact Mr. von Bennigsen-Foerder spoke with the greater warmth about co-operation with the British even before the BP deal was announced. Clearly West Germany's leading energy concern and Europe's leading oil producing nation are natural partners. Beyond that there are close personal relations between the members of the Veba board German oil sector to be in a move away from simple refined products and towards a higher degree of conversion — more sophisticated products coming from the most modern technology. The BP deal helps Veba do just that. In his view this not only makes sense because the oil-producing countries will soon be insisting that they will only sell crude oil along with products they have refined themselves. Ever heard a planner talk business sense?

They do in Cleveland. They'll give you the answers to questions you may not even know you should ask. You'll be surprised how they can smooth out the red tape and get down to action. Fast.

These could be some of the reasons why over £2,000,000 is being invested and 40 companies have set up in the county in the past year. If you are thinking of relocating or expanding, start by talking to John Gillis or one of his industrial development

specialists. They have the experience and they understand your needs and your language. They'll tell you all about Government grants, available land and factories, the county's pool of labour and its good record of industrial relations. All you need to know, in fact, not forgetting Cleveland's beautiful countryside and coastline. Telephone, telex, or fill in the coupon for a businesslike response.

Send me the basic facts about Cleveland

Business books

A guide to the Government's recent White Paper on industrial democracy has been published by the Industrial Society. It explains the various parts of the White Paper including the proposals for legislation on employee consultation and worker directors. It is available from the Industrial Society, 48 Bryanston Square, London, W1, price £1.

Program-Management Control Systems, by Joseph A. Maciariello. John Wiley and Sons. Price: £14.00. The aim of this book is to integrate various contributions with regard to the management of complex programs, together with some new ones, into an operational system for the practice of program control.

Systematics, by John Gall. Wiley. Price: £2.95. An insight into how systems work and especially how they fail.

Comparative Industrial Relations in Europe, by Derek Torrington. Associated Business Programmes. Price: £8.95. This presents a wide view of European prospects in the area of industrial relations by examining a number of different aspects of the current situation and trying to discern future possibilities.

The Meat Trade in Britain, 1840-1914, by Richard Perren. Routledge and Kegan Paul. £7.50. The theme of this book is the changing nature of the meat trade in Britain over the 74 years prior to the First World War.

Urbanisation and Conflict in Market Societies by Kevin Cox. Methuen and Co. £10. This focuses on the conflicts of interest generated in the operation of urban land markets, housing markets and the like, their origin in market societies and their impact upon the changing geography of the city.

Financing the Solar Home by David Barrett, Peter Epstein and Charles M. Haar. Lexington Books. Price: £15. The results of a study, focused on the immediate tasks of assessing lender receptivity to solar energy and developing incentives aimed at increasing the willingness of lenders to finance solar homes, are presented in this book.

Practical Performance Appraisal by Valerie and Andrew Stewart. Gower Press. Price: £8.50. The aim of this book is to help anyone, whether general manager or personnel specialist, who has to set up or run a performance appraisal system.

Many exporters to the Middle East have discovered one rather large stumbling block: Turkey, in particular, the Ankara to Sivas highway. They have learned the hard way that once their drivers cross into Turkey they're on their own, in every sense of the word. That means even a minor accident can turn into a major loss.

Now you can turn it into an insurance claim and get on the spot immediate help to put your vehicle back on the road.

H.L. Thomson, a Hogg Robinson company, have worked out an insurance solution by linking up with international loss adjusters and agents in Turkey and the Middle East. The policy covers the vehicle and all goods in transit

whether they go by land, sea or air

This solution is typical of the innovative work for which Hogg Robinson is famous. It embodies an investigative and creative approach that has helped make us one of the biggest insurance broking groups in the world.

And that approach goes into insurance broking, employee benefits, underwriting, travel, freight, packing and shipping.

If you would like to know more about our services please write or phone.

The anti-foreign lobby

BY GEOFFREY OWEN

IT SEEMS that trade union opposition to the Tennessee bid for Aibright and Wilson, which was discussed in this column last Friday, has been partially allayed. The American company is expected to give undertakings about maintaining the British management of the business and about investment, exports and employee participation. If these are satisfactory to all concerned, the Government should be let off the hook as far as a reference to the Monopolies Commission is concerned—and it will no doubt be relieved about that. However, the issues raised by this affair are likely to come up again. Opposition to foreign take-overs, whether from employees or from other sources, may well become more vocal. The Government may have to decide whether to deal with the opposition on an ad hoc basis, within the general policy of encouraging inward investment, or to modify the policy.

Indiscriminate

There is a group within the Labour Party which is worried about the influence of foreign-owned companies over the country's economy and would like a review board, along Canadian lines, to examine whether each proposed investment is in line with national objectives. It is also feeling in parts of industry that the Government has been too indiscriminate in its wooing of foreign investors.

Some years ago the British firm makers were not happy when American rivals like Du Pont and Monsanto were invited to set up here, with considerable aid from the taxpayer; there was a fear that these investments would create over-capacity. More recently there has been strenuous opposition to some proposed Japanese investments. Lobbying by the domestic industry frustrated Hitachi's plan to build TV sets in the U.K. There are rumours about a suggestion that Komatsu, the manufacturer of construction equipment, might set up a factory here.

Ironically, a leading role in the fight against Hitachi was played by a foreign-owned company, Philips, whose operations throughout the world depend on a liberal policy on the part of the government towards inward investment. Philips subsidiary, Mullard, has just put out a document on the future of the British electronic components industry. Among other things, the paper calls for an "urgent reappraisal" of the criteria used by governments to assess inward investment projects.

Mullard would like to see the opinions of the established UK manufacturers given much more weight. The Government should

Undertakings

The document seems to call for two responses, one from the Government and the other from the Japanese. The Government should re-state its attitude to inward investment, making it clear that while it will wish to take a view about the value of any proposed venture to the economy (as it does now) and seek undertakings where appropriate, it has no intention of making it more difficult for Japanese companies to invest in the UK than it has been, say, for the Dutch or the Americans.

Secondly, it is time Japanese companies woke up to the fact that they are losing the propaganda battle. They may think that all they have to do is to produce goods which people want to buy. But in these days of high-pressure lobbying that is not enough. They have to convince governments and the public that their trading methods are reasonable and that the competition which they offer, whether through exports from Japan or by direct investment, is fair.

Catalyst in the Highlands

BY JOHN GRIFFITHS

THE CLAN MacDuff in the 18th-century dealt with an upstart sheriff by turning him into soup. A small proportion of the long-established residents of the Scottish Highlands rugged Spey Valley were inclined to do much the same to the proponents of the Aviemore tourism centre when it first sprouted a chunk of architectural Americana, near the foot of the Cairngorms 11 years ago.

A few still feel that way. But the majority of the 40 mile long valleys' population of 9,000 has welcomed its arrival and the fact that it has achieved most of the goals first set for it in 1964 by its chief instigator, the late Lord Fraser of Allander, then head of the House of Fraser Group.

The declared brief was to create a domestic tourism magnet: to give Scotland a strong new lever with which to crack open the international tourism market; and to provide some kind of economic base to help stem the seemingly inexorable drift of population from the Highlands. And, of course, to make money.

The first three objectives have met with almost unqualified success. The complex of five

hotels, restaurants, sport and leisure facilities has injected fresh life, opening up new business and social opportunities and reversing the outflow of young people in particular from the area. The centre is paying its way. But with a very heavy plough-back into extending facilities—"I don't think there's been more than a three-month period since we opened that we haven't had the builders in," says managing director Mr. Morris Marshall—it is hovering in the black rather than taking off financially. The centre's latest addition, its Clan Tartan Centre where the origins of 8,000 Scottish names can be traced by computer has just opened, and a planetarium is on the way.

The centre and its hotels, currently employ about 550—half the town's working population. The majority have come from "outside" some only temporarily, but with a good number settling down roots. "At the start everybody worked here," Mr. Marshall recalls, "but small businesses such as craft shops and potteries have proliferated on the back of the Centre's own presence and now account for an increasing share of the town's employment." A few small factories have opened, but industry as such is negligible nor would it be widely welcomed.

The impact made by the centre has rippled out along the Spey to affect the whole of the valley. Tourism for a long time has been the valley's main occupation, with forestry and farming as also-raus. But a decade ago the season consisted mainly of 12 weeks during the summer; skiing had been there

for many years but it took the arrival of the Aviemore Centre to place it on a fully commercial footing. Now there are four chairlifts and seven ski-tows operating with a further ski-tow due to start up this coming winter. Largely as a result of the all-year indoor facilities at the Centre, ranging from conference facilities for up to 4,000, to theatre, cinema, indoor swimming pool, squash courts, dry ski-slope and even a go-kart track—the base of Spey Valley tourism has been transformed.

The many hotels and boarding houses which used to close their doors with the end of summer now stay open all year. Tourism officials say that far from luring visitors away from the smaller traditional hotels which line the valley, the Aviemore Centre has helped fill them.

Part from the three further hotels planned eventually for the 90-acre centre site itself, a cluster of new developments by various operators including the Automobile Association and the Forestry Commission are at various stages in the pipeline. There is increasing emphasis on self-catering; for the Spey Valley's appeal is mainly that of the outdoors and to the self

reliant. Two of Aviemore operates the centre and owns Centre's own hotels are self-catering. When a quiff eye-brow is raised at the Centre's S and N and Tennant Caledonian go-kart track and "Santa Claus Hotels" are so-called, it is not that "Mr. Marshall is quick to insist that "We are not a tourist centre, we are a recreation centre."

But as the extra hotels are added in the centre Mr. Marshall is confident that the £5m invested so far in the facilities will prove as justified, commercially as it is now considered to be socially.

There is almost total co-ordination between the hotels in marketing (the Highlands Islands Development Board has also played a close role). In particular, the centre is chasing hard after lucrative conference business, and over 50 have been secured for the current financial year. Volvo and the Law Society are among those who have been drawn in, and year, some to stay, many others to merely spend the day. At this volume, the centre's facilities are underutilised.

Its hotels are well filled, even throughout most of the year, and indeed two had to be doubled in size within the first 18 months of operation. But they are run separately from the centre itself. Highland Tourist (Cairngorm Development) is owned by Scottish and New Scotland Breweries, Tennant Caledonian and House of Fraser, for about one tenth.

Facilities

At the moment, about three-quarters of a million people visit the Aviemore Centre each year, some to stay, many others to merely spend the day. At this volume, the centre's facilities are underutilised.

Employment

The effect on Aviemore itself has been dramatic. Eleven years ago it was a declining community of 600, its main prop railway junction long since chopped away by the Beeching axe. Today, its old, greystone houses straddling the main A9 roadlink between Inverness, 30 miles to the north, and Perth have been joined by over 300 new homes and the population

length for his fourth consecutive year.

Past his peak when beaten a long way out in the William Hill Middle Park Stakes on his final certain performance, Muscatella has run respectably on two starts this spring without recapturing his former brilliance.

In the belief that he is now back to his best and will be suited by any further spells of the heavy rain which lashed the course yesterday, it should be worth taking a chance with the Newmarket three-year-old.

Solinos, whose stable lifted the race a year ago with Godswalk, is probably a good forecast bet.

considered an Irish banker for the O'Brien-Piggott team by many, could meet his match in Newmarket's Music Maestro.

A powerfully-made Song colt from Michael Stoute's in-form Beech Hurst stable, Music Maestro, a stable companion to Shanganuwin, who pulled out a surprise win in the Gold Cup yesterday, improved tremendously towards the end of last summer.

In Doncaster's Flying Childers Stakes, Music Maestro came through strongly inside the final furlong to beat the fast Wragg ally by three-quarters of a

Piggott, who has had a quiet meeting by his own exacting standards, should have few problems later in the afternoon on John Cherry, the meeting's safest bet in the Queen Alexandra Stakes.

Music Maestro for a surprise

BOOKMAKERS, who can have few complaints about the first win.

For in this event, Solinos, considered an Irish banker for the O'Brien-Piggott team by many, could meet his match in Newmarket's Music Maestro.

A powerfully-made Song colt from Michael Stoute's in-form Beech Hurst stable, Music Maestro, a stable companion to Shanganuwin, who pulled out a surprise win in the Gold Cup yesterday, improved tremendously towards the end of last summer.

In Doncaster's Flying Childers Stakes, Music Maestro came through strongly inside the final furlong to beat the fast Wragg ally by three-quarters of a

£250,000 aid for abbey repairs

THE GREATER London Council—subject to the approval of its finance and establishment committees—is making a grant of £250,000 towards the restoration of Westminster Abbey.

Mr. Horace Cutler, leader of the council, said: "We have had an appeal from the dean and chapter of the abbey, which is

one of the best known and loved buildings in London. It is a treasure of our nation's heritage and it is our duty to help with the preservation of these symbols of British culture and tradition. Far too much of our national heritage is being lost through neglect."

Divertimenti by DAVID MURRAY

St. John's 250th Anniversary celebrations continued last night in the youthful hands of Divertimenti, a chamber orchestra conducted by the experienced Lionel Friend. Last things first: they concluded nobly with Richard Strauss's troubled valde-dion *Metamorphosen*, a "study for 23 solo strings." The piece runs severe risks: its luscious chromatic texture curdles with a suspicion of mistaking, and if the conductor lets its dramatic arch sag it suggests what Stravinsky felt (unfairly) in Janacek's operas—toothpaste squeezed out of a very long tube. Almost every player carries some solo burden, for Strauss did not cheat by giving all the work to the first desks. Finally, the acoustic halo of St. John's was a poten-

tial threat to the clarity of the proliferating voices, without which they blend into sludge. Mr. Friend and his players surmounted all those dangers with great credit, and the result was both moving and beautifully shaped. Divertimenti's first desks are strongly manned (by both sexes), but none of the rank-and-file was content to coast along. The music gathered the broad impetus necessary to match its ever-richer texture, and rose to a keenly sustained climax; the dying fall was poignantly measured, though perhaps Friend was too anxious not to over-insist at the last citation from the *Erzica*. All the playing was so clean-lined that the heady acoustic only flattered it, without smudging. The earlier half of the concert made a scrappier impression. In

Bach's Cantata No. 170, "Vergnügte Ruh", the string and chamber organ were uselessly mated, and in place of the usual (doubtless unauthentic) contralto soloist we had John-Angeles Messana's highly-strung counter-tenor. He was cruelly tried by the second aria, which makes extreme demands on breath control, though he recovered his aplomb for the sturdily reassuring one which ends the work. The witty edge of Stravinsky's "Ragtime" and his second Little Suite was blunted in this hall, despite Divertimenti's crisp attack. The protracted redistribution of the orchestra before each of these tritely took longer than the music itself—and the interval passed more slowly than the subsequent *Metamorphosen*, too. Celebrations should not be so leisurely.

Young Vic

Bartholomew Fair

Michael Bogdanov, the new Artistic Director of the Young Vic, obviously intends the style of business to be much the same as before. His high-spirited version of a day in the streets of Smithfield is happy-go-lucky, come as you are, bright around the edges, but weak at the centre. All energy is concentrated on side-show effects and they begin in the pub next door with an actor tearing a telephone directory in half. As the Bartholomew vapours rise to accommodate the family of the righteous Justice Overdo, the impressionable Littlewits and the cellow Bartholomew Cokes, the spacious interior of the theatre is positively infested with punk punks, baton-wielding policemen, and gymnasts on large balls and tail stiffs.

Nightingale the balladeer becomes a guitar-toting pop star in bangles and satin; the cut-purse Edgeworth a fey mock-innocent in a three-piece suit; Grace Wellborn, a scheming intruder with a modern sexual appetite; Leatherhead, the hobby-horse dealer, a Peacock Lane style veddy. But the rest operate in fits and starts between the gaps. The bawdy puppet show is unusually entertaining. The text given is reasonably full, with a fair amount of tolerable up-dating in the manner of Peter Barnes. I miss, above all, a joyous sense of relish in the language such as evinced in Richard Eyre's Nottingham Playhouse production last year, in which Ken Campbell made an indelible impression as Knockem the horse-courser.

Jonson comedy is to be done in modern, or modish, dress, then a design solution must surely be found for the entire presentation. In an uneven cast, James Carter as Leatherhead and Philip Bowen as the chinless Cokes each emerge with much style and vigour. But the rest operate in fits and starts between the gaps. The bawdy puppet show is unusually entertaining. The text given is reasonably full, with a fair amount of tolerable up-dating in the manner of Peter Barnes. I miss, above all, a joyous sense of relish in the language such as evinced in Richard Eyre's Nottingham Playhouse production last year, in which Ken Campbell made an indelible impression as Knockem the horse-courser.

MICHAEL COVENEY

St. Bartholomew's music festival

One of London's oldest churches, the Priory Church of St. Bartholomew, founded in 1123, will be the venue of London's first festival of 20th century music. The festival, from July 4 to 15, will represent the work of 32 British composers and 16 countries, and there will be 27 premieres in the 23 lunchtime and evening concerts. It has been organised by Andrew Morris, the church's organist, and will embrace the three 20th century music organisations in London—SPNM, the Park Lane Group and the New Macnaghten Concerts. Among the highlights is a concert of works by Krzysztof Pen-

derek on the evening of Friday, July 14, with the composer conducting the London Choral and the Royal Academy of Music Symphony Orchestra. It will include the British premieres of his *De Natura Sonoris I*, *Caprice for Oboe and Caprice for Violin*. The festival opens with Andrew Morris conducting the second London performance of Taverner's *Ultimos Ritos* and the following evening the Koenig Ensemble will play works by Paul Ziaio, Colin Matthews (world premiere), Jaroslav Rybar and Janacek. The Nash Ensemble offers Messiaen's *Quartet for the End of Time* on July 6, and the following day Jane Manning (soprano) and Barry Guy

(double bass) collaborate in a lunchtime programme including works by Guy, Michael Finnissy, Barry Anderson and Xenakis. The Wren Orchestra conducted by Howard Snell gives Stravinsky's *Octet* and *The Soldier's Tale* and Walton's *Facade* on July 8, and on July 10 Electric Phoenix interpret Stockhausen, Cage and others. British premieres of works by Stachowski, Fukushima, Aker and Sohal feature in the Lantano Ensemble lunchtime concert on July 5 and the SPNM concert in the evening conducted by Lionel Friend will include the world premiere of Harold Allen's *Blame Not My Lute* with Timothy Walker the guitar soloist.

Glyndebourne

La Bohème

by RONALD CRICHTON

La Bohème is an unlikely choice for Glyndebourne, not because of the company it keeps there (the opera appears more, not less, admirable as the years go by) but because it so often turns up elsewhere, while other works by Puccini not often, or happily attempted by the larger companies might be considered stronger candidates for Glyndebourne's ensemble methods—*Manon Lescaut*, for example. None the less, *Bohème* was chosen, just over 10 years ago, for a production by Redgrave in designs by Henry Bardon and David Walker. These are used again for an otherwise new production by John Cox first seen on Wednesday.

The result looks perfectly fresh—there is no feeling of re-vamped show. Mr. Cox's direction is unobtrusive but sympathetic; his treatment of the four Bohemians, in particular, is beautifully natural. A young cast spares us heavy gambols from heavy middle-aged tenors and baritones. Except that they are an uncommonly well-favoured lot the young people are totally convincing. The settings, which include a handsome if improbably luxurious Café Momus, are pleasing except for one or two minor details. What, for instance, are the lights visible through the grime of the studio window in the first scene? Since the studio is obviously and rightly in the attic, they can't reasonably be street lamps. And why the fussy levels for the third act set—surely this needs to be emptier, not only to mark the desolate season and the low

point in Mimi's and Rodolfo's fortunes but to make the sharpest possible contrast with the contented crowds of the previous scene. The girls are both American. Linda Zoghy's aquiline, drawn features easily suggest Mimi's fatal illness. She has dignity and simplicity, and she sings well, though even in the last two acts when the voice gains body and warmth, there is so far no very strong personality. So vocally, though not dramatically, the portrait is slightly negative. Ashley Putnam comes with a growing reputation. Her Musetta holds the stage without the tantrums to which more mature sopranos are easily tempted in this role, and with only occasional resort to shrillness. It will be surprising if we don't soon hear Miss Putnam in more important parts. The young Italian tenor Albert Cupido is a find. He looks well and moves with easy, unforced distinction. His lyrical singing at this stage has a touch of rawness: the voice still hasn't filled out. Yet there are musically qualities rare in lyric tenors of any age, high among them a winning way of phrasing quick music so that the words lie perfectly on the notes (godly enough in slower, more straightforward passages Mr. Cupido once or twice showed hazy ideas about rhythm). The Marcellino was Brent Ellis, excellent singer physically much better suited here than in the demonic world of Don Giovanni. The silence after the tenor and baritone duet, admirably sung and directed, so full of sadness and

Albert Cupido, Linda Zoghy and Ashley Putnam

dashed hopes, may be taken as a compliment. The quartet of Bohemians is completed by Alan Charles as Schaunard (a good performance that nevertheless does not always make one aware of the musical riches Puccini slipped into the role) and Willard White as Colline. Mr. White's farewell to his partner is one of the expected pleasures of the evening. Nicola Rescigno conducts. Some of the first act suggested that we were in for a high-pressure reading, though the London Philharmonic was not found wanting. It turned out to be a lively but not rushed *Bohème* full of gleaming detail, with a bloom on the orchestral tone, the strings especially, rarely heard in the dry Glyndebourne pit, least of all on first nights.

Cinema

Oxford supplies the suspense

by NIGEL ANDREWS

Oxford Film Festival
The Stepford Wives (AA)
Paris-Pullman and Phoenix
The Medusa Touch (A) Plaza
The Comeback (X)
ABC Shaftesbury Avenue
and General Release

For the past two weeks England's city of dreaming spires has been metamorphosed into a city of bustle and hubbub. This is the last week of the second year of the Oxford International Film Festival (it ends on Sunday night), an event begun in February 1977 with the laudable aim of supplying the missing link left in the British festival circuit by London and Edinburgh. Of these two strictly for-the-devotee festivals, one is a saturation view of the year's critically best-reviewed films, the other a sternly Scottish demonstration of the principle that cinema is education first, art second, and entertainment a humbly trailing third.

The missing ingredient in both cases is glamour, and that is the item Oxford has been trying to supply. As yet, the festival is squaring up to its task with a budget appreciably less than that of London, and a choice of between-film cultural diversions far less extensive than those available at the Edinburgh event. In its two-year history to date, has been not glamour but suspense. Will the new show arrive on time? Will the major distributors honour their promise not to open the latest Peckinpah or Bogdanovich opus in England before its Oxford premiere? And will the hoped-for star guests arrive for the festival from their respective far-flung corners of the globe?

The answer, alas, has tended to be no in as many cases as yes. Films have arrived late, distributors have thought twice about the appeal of premierring their wares outside London, and this year's intended VIP Rina Hayworth, slated for the role of Honorary President of the Jury, did not turn up; although a red carpet waited optimistically for her on the steps of Oxford's Randolph Hotel. That chronicle of ill luck, however, takes no account of Oxford's improvement in performance and ambition this year (over last), or of the determination glinting behind the steel-rimmed spectacles of Philip Borgeon, the festival's energetic and unhelpful organiser. In the teeth of obvious unhelpfulness from foreign distributors and tenuous rivalry from the London Film Festival, Borgeon has put together the festival's first competitive event and has found some worthy films to put in it: Australia's *The Fishman*,

France's *Sole Rêveur*, Israel's *Rockinghorse* (shown in the Cannes Directors' Fortnight) and, the star attraction, Liza Minnelli in *A Man of Time*, directed by her father Vincente Minnelli. The Best Actress award at Cannes this year, and the superb Australian film, also shown at Cannes, in *Search of Anna*.

The festival has been staging, in addition, a number of "special events": most interestingly an anthology of film gathered together under the title "Goodbye to Berlin" and tracing the influence of Nazism on cinema before, during and after World War Two. The titles range from the 1922 vampire classic *Nocturne*, which many have seen as a prototype of the rise of Hitler, to such latter-day essays in National-Socialist Kitsch as *Cabaret* and *The Night Porter*.

For all its diminutive budget, furthermore, Oxford has succeeded in attracting a fair quota of film-world luminaries to the festival. Last year's British premiere of Maria Bellochio's *Maria Trionfante* was attended by Franco Neri and Vanessa Redgrave, and Borgeon himself chaired a "posium to open the festival." This year's closing night ceremony will be attended by Joseph Cotten, Christopher Plummer, Holly Woodlawn and James Mason.

Next year, one hopes, the festival will edge nearer towards fulfilling the enormous potential the event has as a movie get-together—and that Oxford itself has a venue. This architectural and scholastic oasis, shimmering within easy reach of London, is the perfect setting for a festival aimed as much at the tourist and the casual visitor—from home or overseas—as at the movie aficionado. Next year Borgeon is hoping to hold the festival at each of two later dates, when the university term has ended, and to requisition an Oxford college to house guests. Such a move would draw foreign tourists—not least Americans—like pilgrims to a new shrine. England needs a festival with a dash of glamour and flamboyance, and Oxford is busy answering those requirements.

And so to London. The Stepford Wives nicely illustrates the way radical social movements gradually filter through to popular art. Or not so gradually in this case, since Bryan Forbes's highly entertaining, impressive and timely *Women's Lib*, scripted by William Goldman

The Stepford Wives

from a novel by Ira Rosenberg's one of the happiest marriages. *Baby* Levin, was made three years ago and spent most of its early life, cold-shouldered by distributors, on cable television in America.

It concerns the adventures of a young New York wife and mother (Katharine Ross) who moves from the big city with husband and child in tow, to take up residence amid the sequestered charms of Stepford, Connecticut: a small town in

one of the happiest marriages. *Baby* Levin, was made three years ago and spent most of its early life, cold-shouldered by distributors, on cable television in America. It concerns the adventures of a young New York wife and mother (Katharine Ross) who moves from the big city with husband and child in tow, to take up residence amid the sequestered charms of Stepford, Connecticut: a small town in

Remick. So much for that, and on to the next implausibility. The film wheeders its way from one would-be *pour de force* of action or suspense to another, sometimes redeemed by unintentional hilarity, more often sublimated by an appalling screenplay in which Bushback keeps jumping up at one snafu, and in which the dialogue has the soggy cut-and-thrust of an underwater ping-pong match. The film is "promoted" by the redoubtable Lord Grade, who is busy these days trying to show everyone that British cinema can hold its own in the big commercial world. On the evidence of this film and its predecessors (*Voyage of the Damned*, *Jesus of Nazareth*) I suspect that he has the Medusa touch.

Book Reviews appear on Page 16

America's equivalent of the Home Counties commuter belt. Here peace and composure are almost sinisterly omnipresent: not least in the placid countenances of the neighbouring wives who all walk about, in lace pinafiores and coiffed hair, like wound-up mannequins. Miss Ross's only consolation and ally is her screwball neighbour Paula Prentiss, whose kitchen is an exemplary mess, and who combines a foul mouth with a healthy contempt for the male sissies all around her. However, when Miss Prentiss goes away for a week-end with her husband and returns behaving like the ideal wife, putting recipes and domestic bromides, Miss Ross knows that something very sinister is going on. Visit the movie and uncover the mysteries yourselves. Though made strictly within a commercial format, the film is a spy, witty and hugely enjoyable fable: ing an Englishman," says Miss

More modest in scope but far more effective is *The Comeback* Jack Jones plays a British-based pop star returning to his singing career after a six-year "retirement." He rents an old mansion in the country (whence to come made to his London recording studio) but finds that peace and tranquillity elude him there. Things not only go bump in the night, they scream, wail, whimper, and present themselves in the form of decomposing corpses, outside his bedroom door. The film has in its shock force and immediacy in its shock moments, and although there are holes in the plot, Pete Walker's direction hurries one so swiftly along that they blur into their general texture of Gothic menace.

Festival Hall

Cherkassky

by DOMINIC GILL

The solo for the Grieg concerto in last night's RPO concert under Lawrence Foster, framed by Mendelssohn's *Hebrides* overture and Rimsky's *Scheherazade*, was Shura Cherkassky. But those who expected a whipped-cream confection as fitting to their popular concert-sandwich may have been surprised. Cherkassky's Grieg (to pursue the culinary metaphor) is no mere whimsy: every Cherkassky appearance is a feast of a kind! was fresh, tart fruit with crystalline spun-sugar dressing. He continued in the vein of his last London recital: each foreground gesture etched quick and sharp, the middle and background of the music a swirl of shadow and melting colour.

The first movement blizzards were staccato and bright, almost entirely unpedalled; in the first subject after the opening flourish, both hands an octave apart spoke independently—sudden, magical conversation; the coda was weighty, taut as a spring. In the little adagio, the colours burst into brilliant sunlight at C major—and stayed there. Cherkassky's finale was stormy, but without any trace of dark clouds, full of flashing hurrahs, stern but exciting illumination. (Better still if the cellist had been persuaded to articulate some of his bass line under the piano's solo statement of the central interlude—each single note can make an expressive accompaniment.) Foster's partnership was civilised and attentive; once or twice, maybe, a degree too polite.

Wigmore Hall

Chilingirian String Quartet

Three Schubert programmes selves of Schubert's repeat and made the passage still better the next time. If Schubert's Ninth Symphony is his "Great C major," surely this quartet—exceptionally long, exceptionally rich and with a finale in the same galling 8/8—is his "Great G major." These players paced it excellently, always with room for individual articulation of quickly repeated tremolando notes, such an exact pitching of notes to their tone imposing. A disturbing assured the listener of the in-fault, however, was the untended conflict between G major reliable intonation of their G minor. The youthful leader, Levon Chilingirian, in players of this British quartet higher passages, both here and in almost, if not quite, achieved the "Trout" Quintet.

The assisting artists in the proper that they availed them- Quartet were Clifford Benson, an

alert and sufficiently commanding performance and Rodney Stalford on the double-bass (not at his best, I think). On the whole it was a well-shaped and well-contrasted performance with one or two variant readings which made me wonder whether the players have access to a source unfamiliar to me, or were possessed by an imp of improvisation. For an encore there was a pleasing and rather Beethovenish scherzo of which we were not allowed to know the composer until it was over. Hummed! Mr. Chilingirian then announced, and the audience smiled its approval: the end of an agreeable evening

Pre-summit kite flying

YESTERDAY'S reports from Washington that President Carter is on the point of deciding to impose a surcharge on imported oil if Congress continues to drag its feet over his energy programme, were favourably received in the foreign exchange markets, where the dollar immediately strengthened.

Oil shortages

The news will also be warmly received in the capitals of the major industrialised countries whose prime ministers will be meeting at next month's economic summit in Bonn, since it sharply improves the possibility that they could put together a package which could be labelled a success. During his recent visit to Washington, Mr. James Callaghan, the British Prime Minister, said that a cut-back in U.S. oil imports was an essential ingredient for the success of the summit.

In the longer-term, America's voracious appetite for imported oil could, if unchecked, seriously aggravate the dangers of a world oil shortage in the late 1980s or early 1990s. Recent U.S. forecasts suggested that the country's oil imports were likely to rise from 9m barrels a day to 11.5m barrels a day by 1985, and not decline to 8m barrels as provided for by the Carter energy programme. On the basis of these and other estimates, the International Energy Agency calculated that there would be a world "demand gap" of between 4m and 12m barrels a day by 1985.

Determined action by President Carter to curb oil imports would obviously help to alleviate, or at least postpone, the dangers of such a "demand gap". But from the point of view of next month's economic summit, it is the short-term impact on the foreign exchange markets which is likely to prove the critical factor. The German Government has been for some time under pressure to stimulate its domestic economy, as a way of helping

the world out of the current recession: but Chancellor Schmidt has made it plain that there can be no question of German reflationary moves except as part of a package, one important ingredient of which would be action to stabilise the foreign exchange markets, and especially the dollar.

At this stage, President Carter is not firmly committed to an import tax, since he still hopes for early action in Congress on his energy programme. But the simultaneous announcement that the Energy Department has prepared a petrol rationing plan goes some way to buttress the credibility of what is still in the realms of kite-flying.

Meanwhile, another economic summit kite was flown yesterday, when Mr. Rainer Offergeld, the West German Development Minister, declared that a proposal for transferring \$10bn a year for several years from developed to developing countries, would be on the agenda at the Bonn meeting. This particular kite appears to be rather less firmly tethered to the ground, since it does not have the endorsement of the German Government, and is discounted as fanciful in other capitals. Undoubtedly the problem of the non-oil developing countries, with their heavy accumulation of debts, must come up at the summit, and the participating countries may well agree on some sort of assistance programme. It is much more doubtful if they will agree on a programme on such a large scale.

Currencies

Yet there could be a case for considering a massive transfer programme, not merely for the sake of the help it would provide for the poorer countries, but also because of its potential usefulness in currency stabilisation. Major aid transfers by reserve-rich surplus countries like Germany and Japan, coupled with smaller commitments by weaker industrialised countries, should help alleviate upward pressure on the Deutsche Mark and the Yen, and make it easier for Chancellor Schmidt to give feasibility to his plan for an enlarged European scheme for currency stabilisation.

Liability for defects

THE EXTRA costs that could fall upon manufacturers if the law relating to liability for defective products were to be changed in line with the recent recommendations of the Pearson Commission has aroused concern in many industries. As the Confederation of British Industry has acknowledged in its latest representations to the Government, valid comparisons cannot be made with the situation in the United States since the consequences of product liability litigation there reflect in large part the peculiarities of the American judicial process including, in particular, the system of entrepreneurial trial lawyers. But the CBI does question whether the balance between the costs and the benefits of a change in the law in Britain has been sufficiently considered.

Stiffer test

The costs to industry would, however, depend to some extent upon how the new law was drafted, while the arguments in favour of a change would appear to be considerable. A person injured by a defective product has at present two ways of claiming redress. He can sue the seller under the law of contract, or he can take out an action for tort against the person responsible for the defect. It is rare nowadays for final users to buy direct from the manufacturer and in any case the law of contract gives no rights to third parties who may be injured, such as the purchaser's family or passers-by, while in claim tort the injured person has to prove negligence which is a far stiffer test than the strict liability available in contract law. As a result only a tiny proportion—the Pearson Commission hazarded an estimate of 5 per cent—of injuries or deaths arising from defective products and services attract compensation.

On grounds of equity, therefore, it seems only right that the costs of hardship in personal injury cases should be borne, not by the victim as largely happens now, but should be shared out either among taxpayers through some form of State compensation scheme

based upon the no-fault principle or by consumers generally by making it easier to claim compensation from the firm responsible for the defect. Of the alternatives, the latter would obviously be more sensible as it would give the maker of the defective product (or component) a greater incentive to control quality and safety. Whether compensation was paid by the firm or its insurers, the costs would ultimately be passed on to users in general.

Of the various ways the law could be changed, the most logical would be to extend strict liability to actions for tort, as proposed not only by Pearson but also by the English and Scottish Law Commissions and the EEC Commission in its draft directive on product liability. Limiting strict liability to contract law may have been acceptable in the days when producers and users dealt directly with each other, but not in this age.

It is however not only a question of deciding whether in principle the law should be changed but of deciding the many detailed legal issues that such a change would involve. Judging from the National Consumer Council's and Consumer Association's joint submission to the Government, there is some common ground between industry and consumer bodies. But some of the more contentious matters—such as in particular the standard of proof that would be required—would have a considerable influence upon the magnitude of the costs that would fall upon industry, and thus upon users. There is also the question of whether compensation should cover property damage, non-pecuniary loss as well as injury and whether—a point of special concern to the drugs industry—there should be a legal limit to a manufacturer's liability (as there is normally in his insurance policy). There may perhaps be a case for the State to top up the compensation available when an unforeseen defect in a product approved by a Government-appointed body has catastrophic effects. But, otherwise, the cost of raising product quality and safety ought to fall on consumers as a whole.

A prescription to make EEC fibres healthy again

BY RHYS DAVID, Textiles Correspondent

AFTER NEARLY nine months of negotiation and some intensive diplomacy by top EEC officials, 11 major producers in Europe's fibre industry have this week completed the first stage of a new agreement aimed at restoring the sector to health.

After losing between \$2bn and \$3bn over the past three years as a result of massive over-capacity, low plant utilisation and weak prices, the EEC fibres industry is planning to work together on a series of measures to bring capacity and production into line with demand.

Under the arrangement the procedures will, during the next three years, first stabilise capacity at levels prevailing at the end of last year, when the present talks began, and then reduce it. During this period—though with the exception of the Italians—producers will be expected to maintain the 1976 pattern of deliveries for all the main fibre types, neither gaining nor losing in relation to their competitors. Any increase in the market up to 1981 will be divided on the same basis.

The agreement is an exceptional measure intended to deal with a major crisis, and still has to overcome two possible hurdles.

Though the arrangement has been backed throughout by the industry directorate of the EEC, with the Commissioner, Viscount Etienne Davignon, himself playing an important role at various stages in the talks, it runs counter to the competition rules of the Community, and has had to be vetted by both the EEC competition directorate and the authorities in the individual member countries, including the tough German cartel office.

The EEC has already rejected a proposal that the agreement should represent an informal understanding among the producers and has insisted that it be brought under the formal rules laid down in Article 87 of the Rome Treaty. This could involve the drawing up of

special legislation which would have to be approved by the EEC Council of Ministers.

There are signs too that the German authorities with their dedication to free trade will not let it pass lightly. In Bonn yesterday there were reports that the German Government was unhappy with the provision in the agreement setting limits on deliveries by the individual producers.

Nevertheless, though further bargaining between the Commission and member governments may still have to take place, the need for the agreement has persuaded the producers to complete their part of it, and to proceed, after talks earlier this week with the trade unions, to the formal signing ceremony.

Indeed, as a result of the continued slow world economic recovery from recession, the need to act has become even more urgent, according to the fibre producers, since negotiations started last autumn. The graph shows consumption of all fibres was growing at a rate of about 4 per cent per annum from the mid-1960s but fell back dramatically with the oil crisis in 1973. A recovery took place in 1976 but this was reversed again in 1977.

This figure for final consumption includes imports which were growing, especially at the end of this period, at a very rapid rate. The impact on domestic fibre producers in Europe has as a result been even more serious, as the figure in the graph for mill consumption—usage of fibre by textile producers in Europe—shows. After growing from just under 3.5bn kgs in 1965 to 4.7bn kgs in 1973, consumption of fibre was down by the end of 1977 to 4.1bn kgs.

Behind these figures is the massive shift that has taken place in the distribution of textile and clothing manufacture during the present decade. According to figures from Enka, the Dutch-German fibre arm of the chemical group Akzo, Western Europe

accounted for 31 per cent of man-made fibre production in 1970 but only 22.5 per cent in 1977. The U.S. marginally increased its share from 27 per cent to 28.5 per cent, while Japan, like Europe, suffered a drop in its share, down from 18 to 13 per cent. The rest of the world—low cost producers in the Far East, South America and Comecon—increased its share over the same period from 23 to 35 per cent.

The result has inevitably been over-capacity in Europe—estimated currently at around 30 per cent—and continuing losses by all the major producers in fibres. Furthermore, there is not too much comfort to be drawn from the projections of the likely future size of the market which will be available to European producers in the years ahead. ICI's estimates show that if demand rises throughout Europe at an average 2.5 per cent per annum rate between now and 1985, fibre consumption including imports in that year will reach 6.05bn kgs against the present 4.85bn kgs. The amount of fibre which European producers will be able to sell is determined, however, by the level of imports. If these grow at the same rate as in the three years up to the end of 1977—roughly 15 per cent—European producers could be left supplying only 2.55bn kgs out of the total usage, and even this assumes a fair increase in exports from Europe.

On a less pessimistic assumption—a 6 per cent per annum increase in imports—European mill intake in 1985 will be 4.73bn kgs. If the present round of the Multi-Fibre Arrangement, signed at the end of last year to regulate textile trade internationally, proves fully effective, and imports grow at only 4 per cent per annum, mill intake could reach 5.05bn kgs. The capacity problem is given a further dimension, however, by the improvements which are continually taking place in man-made fibre production machinery, making it possible for the producers to increase significantly the output at existing plants.

So the need for co-ordinated restructuring action by the sector to meet new market conditions has been apparent for some time. The negotiations have been able to proceed only slowly, however, because of the precedent such an agreement could set for other crisis-hit industries, and more particularly because of the conflict of interest between fibre producers in different parts of Europe.

In Northern Europe the major producers started adapting several years ago and have already eliminated large

amounts of capacity. Thus ICI has shut down plants in this country at Wilton on Teesside and in Germany at Offenbach and has trimmed its labour force by 30 per cent. Hoechst in Germany has also closed plants and reduced its total employment by 25 per cent while Akzo, too, has embarked on major surgery.

The Italians, who have a lower share of the total fibre market than Britain or Germany, while at the same time possessing a very large textile and clothing industry, have been insisting on their right to catch up and at least become self-sufficient in synthetic fibre production. As a result, at a time when other producers have been cutting back, the Italians, whose fibre industry has also been making the biggest losses in Europe, have been going ahead with a major investment programme.

The need to secure Italian co-operation has resulted in a compromise which does go some way towards meeting their aspirations while achieving the overall objective of a reduction in capacity.

New capacity levels

The first main element in the agreement is the setting of new European capacity levels for six main fibre groups—nylon textile and nylon carpet filament, nylon staple, polyester textile filament, polyester staple, and acrylic staple. Total capacity—currently put at around 3.12bn kgs—will be reduced as a result of these measures to 2.73 kgs.

At the same time the producers are being divided into two groups. Non-Italian producers will be expected to reduce their capacities by mid-1979 and hold them at the new level until 1981. The Italians will also be expected to reduce their capacity in the short term from 600m kgs to 515m kgs, but unlike the other producers they will be able to raise it again to 600m kgs by 1981. This will enable the Italians to replace older capacity with new, and compares with their original plan to boost capacity to 800m kgs.

Within the new overall capacity levels for the various fibres, individual companies will be expected to follow the output pattern set in 1976, when total deliveries throughout Europe amounted to 2bn kgs. This provision means that signatories to the agreement will not be allowed to increase their market share at the expense of their competitors. The formula also places the onus for making capacity reductions on companies that have not already

Viscount Etienne Davignon: important role in the talks.

done so. Those that have balance sheets, ICI will be already brought their capacity putting up prices for fibres by utilisation up above the average 15 per cent from throughout the industry of July 1—its first general increase around 80-70 per cent will still for 15 months.

Uncertainty over the way the market for fibres will develop in 1978. This share is also to remain stable, remains a potential the same up to 1981, except for the agreement. The that the Italians will be allowed to increase capacity and a bigger proportion of the production by 1981 were drawn estimated growth of 270m kgs up last year, and the estimates in the total size of the market would be revised downwards by by that date, to 2.28bn kgs. Most producers, if the calculation. Other suppliers will forfeit capacity had to be made now.

Provision exists for the this total growth, and this will figures to be reviewed twice be transferred to Italian producers, enabling them to increase their current 17 per cent share of the European market to 21 per cent. The rules also prevent switch- ing from export to domestic markets in the event of a down- 10 per cent. A problem could turn in demand outside Europe, arise if growth in the market or increases in capacity to serve expansion in export markets. Investment in new capacity to replace old will still share to the Italians.

There is also the question of the attitude of important non-signatories who are in a along these lines follows a position to influence develop- ment of hard bargaining, with the producers naturally anxious to gain any competitive advantage from the deal. Whether participating, but have been it will work will only become clear as experience of operating EFTA countries also have the agreement—without parallel significant or growing fibre so far within the EEC—is being made that they will not be allowed, though clearly this will be closely watched.

The signing of the agreement signifies who are in a position to influence develop- ment of hard bargaining, with the producers naturally anxious to gain any competitive advantage from the deal. Whether participating, but have been it will work will only become clear as experience of operating EFTA countries also have the agreement—without parallel significant or growing fibre so far within the EEC—is being made that they will not be allowed, though clearly this will be closely watched.

On this point, however, there is some confidence on the part of the fibre producers, who believe a degree of common purpose has been established in the talks. The participation of the Italians was obviously crucial and there are signs that the task of rationalising Italy's fibre sector is already being tackled with great vigour as a result of the deal. The new management which has taken over at Rhone-Poulenc, the French chemicals, fibres and textiles group, is also moving ahead with its programme of restructuring, and these moves

bring both countries more closely in line with progress already made in Northern Europe. At the same time, the prospect of stronger consumer demand later this year coupled with more stable market conditions, through implementation of the measures which the textile industry takes to strengthen itself as on the capacity and needed to take the measures necessary to strengthen their now been worked out.

MEN AND MATTERS

Street cleaner's lead in GLC

A small victory over the visual vulgarity in London's West End has just been achieved by the GLC. After a refusal to renew its licence, a sex-cinema in Brewer Street, Soho has removed a lurid display on its walls. "It now looks almost like a Presbyterian church," says Bryan Cassidy, vice-chairman of the GLC's public services and safety committee. In the year since he was elected as a Tory councillor for Hendon, Cassidy has led the "clean-up-London" campaign. What vexes him particularly is the hyperbole of the posters outside London's sex cinemas and strip clubs. "Having been in a few, I think it's high time they were prosecuted under the Trade Descriptions Act."

Cassidy, a 43-year-old business executive, says it is high time to end the "chaotic state of the law" over censorship. But his views may blow a few fuses in the Festival of Light executive,

because Cassidy thinks Britain should have "P for Porn" cinemas on the Continental pattern, where any legal sexual act can be seen. "The parallel with gambling is very close—if you want to place a bet you know where to go." But the proviso would be: no offensive nudity on the street billboards. Needless to say, Cassidy looks forward to a general election victory by the Tories later this year. He recalls Willie Whitelaw's promise to reintroduce the Cinematograph and Indecent Displays Bill, which will make it far easier to "clean up the streets." When that step has been taken, affirms Cassidy, the end of censorship will follow. "Live and let love is our aim."

Up against it

Rough days for Lloyd's of London. First New York is making threatening noises about setting up a market to compete with it—and now New Zealand are fed up down under with the number of Lloyd's salesmen sent over to sign up new names for Lloyd's underwriting syndicates. Denis Adam, chairman of one of the main insurance brokers in New Zealand, tells me these "itinerant salesmen raise some eyebrows." He resents the way that "our capacity is being used to expand a market 12,000 miles away."

Adam is now a member of a committee advising Wellington on how to establish an insurance exchange based on Lloyd's. It is a move designed to reduce the NZ insurance community's dependence on a market which Adam feels is too inward looking and "thinks insurance begins and ends with London. With this we cannot agree." Will this news make Lloyd's ring the Latine bell for the business they may lose? Let me reassure

you. Premiums from New Zealand may amount to £14m, but the Lloyd's total is £2bn.

Gem for Jonas

Museums and collectors of the world are homing in on a newly discovered Brazilian treasure. But Brazil means to hang on to the amazing find of farmer Jonas Lima. Not long ago, Lima was poking about in a cave on his property and found a rock which has been described as "almost pure shafts of rubellite set on a base of bifurcated quartz crystal surrounded by modular crystals of lepidolite and microcrystals of apatite and epidote."

In layman's language, this amounts to a very large piece of rubellite, almost as hard as a diamond, weighing 25 lb, more than 50 inches long and a foot wide. Mining experts say it must be worth several million dollars.

The Brazilian Institute of Gems and Precious Stones says it will match any foreign bid to prevent the stone leaving the country. Farmer Lima has just hidden it in a secret place and announced that all the fuss has made him so nervous that he plans to escape on a trip to Europe.

The other side

Belgium's best selling novelist, Ward Ruyslinck, is baffled because his books keep on being published in Eastern Europe. His theme is always the destructive individuality by oppressive bureaucracies—scarcely one likely to please communist regimes. Yet the requests for publication rights keep coming in from such countries as Poland and Romania. "I think the book editors are using me to make oblique comments on their own societies," says Ruyslinck who is in London to help launch the

English version of *The Reservation*, his latest nightmarish novel.

Ruyslinck has found it less easy to penetrate the literary iron curtain here. I learn that the book is only appearing because the Belgian embassy has promised the publisher, Peter Owen, that it will cover the translation costs.

Toeing the line

Dr. Dickson Mabon, Minister of State for Energy, yesterday put away his Portuguese phrase-book and cancelled his air ticket to Rio de Janeiro. He will not be going to the "Offshore Brazil" conference, where he was to have promoted business for Britain's oil industry. Instead he will be obeying a Labour three-line whip for Monday, to attend the Tory supply day debate on national trade and prosperity.

Mabon is reported to be almost as angry as Energy Secretary Anthony Wedgwood Benn was last month, when parliamentary pressures of the same kind stopped him going to an offshore conference in Texas. Both hope that the impending general election will, one way or another, put them out of their misery.

Not a chance

A colleague tells me that while caught in a traffic jam at Hyde Park Corner yesterday, he shouted to the driver of the car beside him: "Drives you mad, doesn't it?" "Yes," the other driver shouted back, "but what can one do?"

"Write to my MP," my colleague suggested, only to be told: "Don't be daft, old boy, I am my MP."

Observer

Get your factory moving up the MI

Actually we told Mr. Elgort, he needn't bring the building with him. Since 1970 Northampton has created about 5 million sq ft of additional industrial development. Many internationally known concerns have already relocated here. We have unit factories already built in sizes from 3,000 to 40,000 sq ft. Off-the-peg factories can be ordered in multiples of 10,000 sq ft and virtually unlimited sites are immediately available on four new employment areas. Some sites can have private rail sidings if desired.

As well as its central location, affording ease of access and distribution via the motorways to all parts of the country, Northampton has tremendous advantages to offer firms wishing to relocate their factories and warehouses. As well as economic rents and a first class labour relations record the expansion of this historic county town means excellent homes for your staff to rent or buy, new shops, new schools and new community facilities. Most important, however, it means that Northampton offers new opportunities for growth and success.

For further details phone 0604 34734 or write to: L. Austin-Crowe, Chief Estate Surveyor, Northampton Development Corporation, 2, 3 Market Square, Northampton NN1 2EM.

ATV on target with record £13.7m

IN LINE with the forecast of profits not less than £13m made at the time of the October 1977 rights issue, Associated Television Corporation reports a record pre-tax surplus of £13.7m for the year to March 26, 1978, compared with the previous year's £11.1m. At mid-year, the result was slightly down from £13.7m to £13.0m.

Turnover for the year rose from £88.9m to £113.6m and profits were subject to tax of £3.78m (£3.1m) in accordance with ED 19. After extraordinary items of £140,000 (£245,000) and minorities, attributable profit was better at £8.05m (£7.22m). Comparisons are restated.

Stated earnings advanced from a restated 14.88p to 16.83p per 23p "A" share. As forecast, the total payment on increased capital is £1.1m to £1.2m. The company has issued 1.1m shares with a final of 3.77p net—a final of 13.10p on the ordinary capital makes a total of 26.19p (£2.68p) per £1 share.

The directors say that if the rate of ACT is reduced before the AGM on September 14, they will recommend the payment of an appropriately increased final dividend.

The amount released from deferred tax, together with the share premium obtained on the one-for-four rights issue and a surplus arising from the revaluation of properties, has contributed to an increase of £24m in the group's reserves.

Asked about the current year, Lord Grade, the chairman, commented: "There is only one word for it—sensational. Capricorn One has opened in the U.S. and took over US\$8m in the first ten days. It is going to be a really big one—our first really big one."

"We have several other very, very big films and we are very buoyant about the films sector. We believe we have got this off to a fine start," the chairman added.

"Every division looks outstanding and we are confident our results will exceed last year's figures," he said.

Anytime, which made a loss in the previous year, turned in a profit and "is making great strides."

Lord Grade said ATV was still on the takeover trail, but there was no deal in prospect at the moment. "We are very cautious when we go into other businesses for we only go for those with growth potential," he said. "There will be several other things in due course and we are investigating."

comment

The market expected ATV to top last October's profit forecast of over £13m by a bit more than 5 per cent. Television advertising revenue was buoyant along with the rest of the sector and Anson's turned into the black with a profit of £400,000 compared with a £200,000 loss. Films, however, did not present such a bright picture. Though the overall contribution to profits held up a few new films released within the year failed to live up to expectations and write-

Upsurge at Crest Nicholson

WITH TURNOVER up from £11.83m to £18.84m taxable profit of Crest Nicholson jumped from £0.43m to £1.01m in the April 30, 1978, half-year.

Directors say the substantial growth in full year profits predicted recently is well within grasp, and that the improvement is coming from all parts of the business.

The property division is expected to produce an impressive improvement in profitability for the year while the marine activities, although busy, are not yet achieving full profit potential.

Orders for tennis courts and other playing surfaces are well up, which will result in improved second half profits. All industrial companies have shown an increase in activity.

They say the Board continues to seek further opportunities for expansion.

The result is subject to tax of £0.32m (£0.21m) and minority interests of £23,000 (£19,000). The interim dividend is lifted from 1p to 1.5p. Last year a 2.32p final was paid.

Full-year pre-tax profits from the housing to leisure group Crest Nicholson look to be on target for the £2.6m expected by some brokers earlier this year. There is a strong second-half bias, particularly in the building activities, both on the housing and leisure fronts. Profits from housebuilding have risen from around £214,000 to around £440,000 due to a firmer trend in the house-building cycle. Crest's own house prices have been outperforming the national trend, rising by well over 15 per cent on the comparable period, while cost

After tax of £3m, compared with £2.74m, and minorities £53,000 (£48,000) the attributable balance came out lower at £2.48m, against £2.49m, and on capital profit of £2.55m net. Also an additional 0.033p will be paid, if ACT is reduced, with the interim dividend for the 1978-79 year.

The dividend is stepped up to 4.25p (£4.47p), as forecast at the time of the issue, with a final payment of 2.55p net. Also an additional 0.033p will be paid, if ACT is reduced, with the interim dividend for the 1978-79 year.

The dividend is stepped up to 4.25p (£4.47p), as forecast at the time of the issue, with a final payment of 2.55p net. Also an additional 0.033p will be paid, if ACT is reduced, with the interim dividend for the 1978-79 year.

The dividend is stepped up to 4.25p (£4.47p), as forecast at the time of the issue, with a final payment of 2.55p net. Also an additional 0.033p will be paid, if ACT is reduced, with the interim dividend for the 1978-79 year.

Lookers £0.8m at midway

FIRST HALF results of Lookers, the motor vehicle distributor and engineering group, are a record and the directors are also expecting a peak result for the current year, to September 1978.

From higher turnover of £27.49m against £20.62m, pre-tax profit for the first half ended March 31, 1978 rose from £0.64m to £0.82m, in 1978-79, the group reported full year profits of £1.4m.

The interim dividend is lifted from 0.9075p to 0.9825p and if the ACT rate is reduced, a supplementary dividend for the previous year will be paid with the interim on September 29, the directors say. Last year's final was 1.5497p.

Profit in the first half was struck before tax of £443,778 (£313,361) and extraordinary items of £7,384 (£74,338) down. The interim dividend absorbs £74,000 (£67,280).

All trading departments contributed satisfactorily during the period. New car sales have been buoyant and in addition parts operations, vehicle leasing and contract hire, and commercial vehicles sales have shown good results.

The agricultural division maintained its turnover, but profit margins have been under pressure.

The second half has started reasonably well, but higher input costs will raise costs, the directors state.

Mr. J. D. Birkin, the chairman, says that trading profit at £3.22m was up 13.9 per cent on last year's £2.82m even though the year saw an intensification of the already poor trading climate in the car and building materials industries with weather conditions being responsible for a particularly bad March quarter.

The growing costs of the Stabilisation and International Development programme for industrial waste treatment have been absorbed. The plant at Thurrock will be opened by The Prince of Wales on July 7.

Latest full-year results from Tunnel Holdings are at the lower end of estimates. Labour problems, a still depressed building cycle and unusually bad weather (during the group's last pre-tax year) have not helped the overall performance. A weaker performance at the associate level has not helped where profits fell away from £1.12m to £973,000 in the second half. This seems due principally to increased competition in world asbestos markets which has affected the performance at Cyvros Asbestos Mines while currency factors have had an adverse impact elsewhere. Meanwhile in the home cement market, the share continues to slide. At the beginning of its financial year Tunnel started with 10.6 per cent of the market but now holds nearer 10 per cent. Meanwhile the cash position of the group is strong at £16m—equal to around two-thirds of the group's market capitalisation. For the longer-term there is bound to be speculation about what the group's entry into waste disposal activities will have on earnings (the first results of which will not be seen for two years) and more predictable disposal of the shareholding by Thomas W. Ward. Both factors could provide support for the "B" shares standing at 282p on a p/e of 6.9 and yielding 6.5 per cent.

The group's 50 per cent interest in SA Aclers Alexis has been disposed of and the release of provisions came from this source. Turnover for the year was virtually static at £32.97m (£33m), but directors say that volume showed some reduction, and this, with higher costs in general, affected results.

Profits before tax of £224,000 (£274,000) and minority interests of £74,000 (£142,000). Last year there were extraordinary profits of £53,000.

Earnings per 12 1/2p share are shown at 1.72p (£1.41p) and the interim dividend is stepped up from 0.4p to 0.44p. The rate of final dividend will be decided in the light of circumstances prevailing at that time. Last year a 1.05p final was paid on profits of £2.86m.

Trading in the majority of manufacturing operations is being affected by adverse market conditions but the stockholding division continues to produce satisfactory results.

The group's 50 per cent interest in SA Aclers Alexis has been disposed of and the release of provisions came from this source. Turnover for the year was virtually static at £32.97m (£33m), but directors say that volume showed some reduction, and this, with higher costs in general, affected results.

Profits before tax of £224,000 (£274,000) and minority interests of £74,000 (£142,000). Last year there were extraordinary profits of £53,000.

Earnings per 12 1/2p share are shown at 1.72p (£1.41p) and the interim dividend is stepped up from 0.4p to 0.44p. The rate of final dividend will be decided in the light of circumstances prevailing at that time. Last year a 1.05p final was paid on profits of £2.86m.

Second half loss from J. Lyons—no final

FACTORS ADVERSE to the UK businesses of J. Lyons and Co. intensified during the last quarter of the March 31, 1978, year and for the second year half the group lost out from a £33m profit to a £20.5m loss resulting in a full year's downturn from £9.5m to £52.5m. Last year the figure was still an exceptional debit of £5.68m.

The group is also passing the final dividend payment to the shareholders, which will be 10p per £1 share compared with 15.75p for 1976-77 which included a 9.535p final. But directors hope to restore the dividend to at least the same level as 1976-77.

Turnover for 1977-78 was ahead by £21m to £790m, and loss per share is shown as 44p (15p earnings).

The directors state that in particular the effect of reduced spending on food has been exacerbated by the fierce price competition between food retailers, which impacted adversely on the manufacturing margins. The poor summer weather militated against the group's ice cream and soft drinks businesses and in the price control regime contributed to increased losses in the Replier meat business and further delayed its planned recovery.

It is noted that these difficulties could have been more easily faced had it not been for the serious dislocation of the tea, coffee and instant coffee markets which have witnessed unprecedented commodity price movements. This dislocation, aggravated by "unappreciated government intervention", has significantly reduced group profits; the directors estimated by nearly £5m below what could have been expected in more normal and stable conditions.

However, the directors remain convinced that there has been no adverse fundamental change in the underlying strength of the group for the long term operating position.

They say that the modest upturn in UK consumer spending in April appears to be resulting in

some increased expenditure on food. The group's UK business is benefitting from this as well as from the actions taken by management. "There are currently similar signs of recovery overseas, notably in the U.S.," they add.

Directors say that while it would be injudicious to forecast the 1978-79 results, their experience so far in 1978 and indications from the market-place, persuade them that the recovery in the food market is well advanced. It is only delayed and that the current year as a whole should see a marked improvement in group performance.

An analysis of turnover and trading profit of £26.07m (£35.72m), was split into UK and overseas as at UK; food £17.1m (£21.03m); catering £14m (£18.5m) and £6.92m (£0.18m); property £2m (£1m) and £1.94m (£0.22m). Non-foods £10.97m (£11.8m) and £6.5m (£0.11m loss).

And overseas: food products in Europe £237m (£219m) and £5.72m (£4.4m); in U.S. £179m (£165m) and £1.5m (£0.55m); other £20m (£12m) and £0.67m (£1.1m); and hotel £1m (£1m) and £0.15m loss (£0.13m loss). Businesses sold £8.1m (£5.6m) and £1.6m (£4.4m).

In the UK the increase in consumer spending on food in the early months of the year was followed by a significant decline. The group was backed up only towards the end of the year.

Following a stock-up of tea at the beginning of the year, the price of tea later fell, thereby lengthening the number of weeks stock cover represented by the purchases made when the world prices were very high. In August 1977 the price of tea at the retail price was reduced and demand began to improve.

But a Price Commission report at the end of January on grounds of inflationary pressure on food is patently inconsistent with economic facts. The directors say that the effect on sales was

disastrous.

However, since the beginning of the current year, sales have recovered to more normal levels.

Also the high cost of coffee beans led to considerable tolerance and both instant coffee and ground coffee sales declined severely, they add. Consumption of instant coffee has followed a series of price reductions, resulting from a fall in bean costs.

Homburg, the group's major pig-meat operation in the Netherlands, has been hit by a depressed level of performance and the North American business has again performed well, although its contribution was affected by the fall in the dollar.

* Related to account for change in basis of valuation of investments in companies previously regarded as associate. * Profit.

There was a reduction in the results of £87m (£5.30m) which was principally from a £2m write-off from goodwill following closure of the loss-making fresh meat operation which was previously run by Lyons and Co. and a £2m provision against the possibility that the group's investment in Spillers-French might need to be written down. The new classification of the company's position.

The directors continued to give priority to reducing the high gearing of the group and reduce the total debt by some £21m, only a small part of which will be by favourable exchange movements.

Baker Perkins turns in £8.93m

AFTER A marginal increase from £3.55m to £3.55m in the first half, pre-tax profits of Baker Perkins Holdings rose 10% year on year to £3.17m, ahead from £7.92m to £8.53m on sales of £86.5m, against £81.42m.

After tax on the ED19 basis of £1.94m, the full year earnings were stated at 29.5p (19.7p) per 50p share and the dividend total is raised from 3.884p to 4.3p net with a final of 2-4p.

Available	2.99	2.89

ED 19 and 21 have been applied and comparative adjusted. Creditors.

The increase in interest payments reflects the cost of servicing the loan raised last year to finance the purchase of majority interests in Baker Perkins Inc. The lower tax charge is the result of substantially higher investment in plant and machinery and an increase in stock relief.

Returned to shareholders capital employed of profit before interest and taxation on the historical cost basis was 22.8 per cent compared with 21.3 per cent in 1976-77.

Sales increased by 8 per cent, with the proportion outside the UK similar to last year at 71 per cent. The increase understates the actual improvement in sales as if adjustments were made to last year's sales values to reflect the disposal of the laundry machinery business announced in December, 1977, and the strengthening of sales outside the UK, the 1977 and 1978 sales figures increased by approximately 12 per cent.

Mr. Ian Gilbert, the chairman, says that having regard to the persistently sluggish business climate which prevailed in most of countries throughout the year, he considers the result a creditable performance. On the likely order book for the current year he tells members the mood of uncertainty in the markets of the world seems to be greater than 12 months ago and business confidence is at a low level.

Baker Perkins started the year with a somewhat lower order book than a year ago and there is still a noticeable hesitancy in finalising orders. This has inevitably caused a slow start to the current year and it is unlikely that the results for the first half year will exceed those of last year. However, provided the economic climate does not deteriorate further, further progress should be made in the full year.

The group manufactures plant and machinery for the bakery, biscuit, chemical and printing industries.

● **comment**

Baker Perkins' 13 per cent profits rose, along with the company's announcement of a sluggish start to the current year, disappointed the market and the share price fell 7p to 97p. While world demand

for capital equipment is still relatively slack, there has been some increase from the U.S. and the continental Europe. This enabled BPs' division making laundry foundry and printing plant, which together with similar improvement from the Australian company meant that the overall division broke even after incurring a combined loss of £1.1m. Equally the food processing and packaging machinery division was able to make up its loss in spite of a downturn in demand for bread-making plant. But the chemical machinery side's profits were quarter lower due to increased expenditure on product development. However, the order intake so far this year has been relatively poor and industrial problems with the associate in Germany during March will reduce the contribution. The share price reflects the depressing outlook with a p/e of 3.2 while the yield of 4.9 per cent, covered almost seven times.

Tebbitt Group loss exceeds £214,000

Following a turnaround from 22nd place to a deficit of £95,514 at halfway, Tebbitt Group fell deeper into the red in second six months to finish with a pre-tax loss of £100,000 compared with a £24,588 surplus last time.

Mr. Neil Salmon, chairman of J. Lyons—dislocation of tea and coffee markets in UK, following commodity price movements, cut profits by some £5m.

Substantial progress being made at M & S

THE CURRENT year at Marks & Spencer has started very well with substantial progress in both turnover and profits, the chairman, Sir Marcus Sleaf, told yesterday's annual meeting.

"The hope is that in 12 months' time I will have better report to you today's to present to you," he said. In 1977-78 the retailing group recorded a pre-tax profit of £117.9m from a turnover of £1,250m.

In reply to a question on the company's attitude towards accepting credit cards, Sir Marcus said a proposal is being studied and that a decision was likely before the end of the year.

Directors continued "to be on the alert for new opportunities to extend our business" and since further acquisitions of merchants have been under negotiation.

"It is too early yet, however, to say that these have been finalised" he added.

On current trading Sir Hugh recalled that the figures for the weeks to April 29 reported recently sales were shown to be ahead by 11 per cent and net profits ahead by 113 per cent compared with the same period last year.

The upward trend has continued in May and sales and net

Advance by Investors Capital

Gross revenue for the first 10 months to May 31, 1978, at Investors' Trust rose from \$1.22m to \$1.72m and net revenue advanced from \$0.56m to \$0.86m. Earnings are shown at 1.04p (0.85p) per 25p share and the interim dividend is lifted from 0.6p to 0.7p net. Last year's net was 1.65p paid from net revenue of 1.81p.

Net assets have risen by 7 per cent since November, 1977, mainly owing to the recent strength of many of the trust's American holdings. While asset value per share has risen from 54.54p to 103.0p during the period, since the start of the year, the market indices in the U.S. and UK are on balance little changed.

Tebbitt Group loss exceeds £214,000

Following a turnaround from a £20,640 profit to a deficit of £99,514 as half-year Tebbell Group fell deeper into the red in the second six months to finish 1977 with a pre-tax loss of £214,442, compared with a £24,888 surplus last year.

In the midway, the directors said that since the group had come into new ownership, a thorough assessment and reorganisation had taken place and they were confident that the benefit of this would be felt before the year-end.

Loss per 10p share for the year increased from 0.39p to 4.73p and again no dividend is to be paid — the last payment was 0.67p net in respect of 1976.

Turnover for 1977 dropped from £28.2m to £1.63m and the result was before a tax credit of £34,640, a debit of £25,893 (a preliminary debit of £25,893 (£2,883 credit)).

matched the directors' best expectations with dividend increases from equity investments and rather more earned than anticipated on cash balances.

On the basis of the current estimates for the full year the directors expect to recommend an increase in the final dividend not less than the 17 per cent in the interim distributions.

More deals in view at House of Fraser

A hint that news of further acquisitions by House of Fraser may soon be heard was given yesterday by Sir Hugh Fraser, the chairman, at the annual meeting in Glasgow.

He told shareholders that the

Arbuthnot Latham increase

WITH £708,000 against £671,000, coming from the banking group, and £387,000 against £382,000. The other group comprising profits after tax of Archambault Latham Holdings, rose from £1,050m to £1.4m for the year to March 31, 1978.

After taking into account the share of profit of associated companies and deducting loan charges and minorities, the attributable profit, before extraordinary items, is £1.1m (£0.93m), an increase of 18 per cent.

Earnings are shown as 15.9p (13.5p) per share and undiluted earnings are 12.5p (12.5p) diluted. The final dividend is 6.35p per share making 10.06p (8.11p), the

John Laing's property flotation

John Laing and Sons, the international contracting group, is to go ahead with its plans for a separate quotation for its £85.5m property investment division.

Mersey Docks still chasing extra trade

The general cargo trade continuing at a low level Sir Arthur Peterson, chairman of Mersey Docks and Harbour Company told the annual meeting. Some trades, however, have picked up, he said, and the directors are continuing their efforts to obtain more trade for the port.

He warned that the directors'

H. J. Heinz declines to £17.3m
Taxable profit of H. J.

Company, the food group, dipped from £17.27m to £16.16m on the April 30, 1978 year.

After tax of £8.27m (£8.73m) net profit came out at £7.89m (£8.54m) before extraordinary debits of £11.32m (£0.78m).

The company is a subsidiary of H. J. Heinz Company of the U.S., which has produced a Scheme of Arrangement to cancel the outstanding 8.08 per cent of shares in the UK company not held by it.

Earnings Increased by 32%

Points from the Review by the Chairman, Mr. Murray Hofmeyr

Earnings

For the year to 31st March, 1978 increased by 32% to £25.4 million (equivalent to 24.26p per share) compared with £19.3 million (equivalent to 18.40p per share) for the previous year.

Extraordinary Items

Provisions under extraordinary items totaled £21.7 million including £8.2 million to cover currency movements, £7.5 million against our investment in Cleveland Potash and £6 million for Botswana RST.

Cleveland Potash

Progress in the development of Cleveland Potash has continued to be slow and costly and production has only recently risen above 30,000 tonnes per month — just under 40% of design capacity. Considerable progress has been made and there are no longer any known geological or other purely technical factors which need prevent steady progress to profitability. However, the overall level of performance is still much below forecast and a far more effective and sustained commitment will be needed if success is to be achieved.

Tin Mining Interests

Charter's tin mining interests are now concentrated in the 28.6% holding in Malaysia Mining Corporation and we received our first

We are currently investing substantial amounts to expand the operations of our industrial companies and are continuing our search for further opportunities to enter other industrial sectors with encouraging prospects. In this way we intend to achieve a more equal balance between our industrial and mining investments and between our U.K. and foreign earnings.

Metal Prices

In the short term the prospect for a substantial increase in base metal prices is not encouraging but in the longer term there is no doubt that the demand for metals and minerals will continue to grow. The mining industry must meet the challenge of providing for this increased demand but the investment necessary will be made only if investors have greater confidence about prices and about their ability to achieve adequate protection against major political risks.

Copies of the Annual Report and Accounts can be obtained from 40 Holborn Viaduct, London EC1P 1AJ, or from P.O. Box 102 Charter House, Park Street, Ashford, Kent, TN24 8EQ.

Charter Consolidated Limited.

MINING NEWS

Charter steps carefully out of the wood

BY KENNETH MARSTON, MINING EDITOR

LONDON'S Charter Consolidated, the UK mining finance arm of the South Africa's Anglo American Corporation, is still treading its way carefully after having survived major and costly disappointments, such as the ill-fated Tenke Fungurume copper venture in Zaïre and the disastrous investment in the Botswana RST nickel-copper operation.

Another problem child, the Cleveland Putash operation in Yorkshire which was written down by £7.5m last year, has only recently reached a production rate of just under 40 per cent of capacity. Further funds of up to £15m will be provided this year by Charter and its partner Imperial Chemical Industries to support the struggling operation.

Charter's chairman, Mr. Murray Hofmeyr, says in the annual report that at least there are no longer any known geological or purely technical factors to prevent Cleveland's steady progress to profitability. But income problems remain and Mr. Hofmeyr cannot see a rapid improvement in the price of potash while substantial stocks overhang the market.

In the past year to March 31, Charter raised its earnings to £25.4m from £19.9m, thanks to increased dividends from Anglo and the diamond interests coupled with higher share-dealing profits. At the same time, Charter's diversification paid off in that higher income from tin, wolfram, diamonds, gold and platinum cushioned the fall in earnings from the depressed base metals.

Much of Charter's strength is drawn from its major investments in other leading finance houses, this source providing 54.2 per cent of 1977-78 investment income compared with 49.9 per cent in the previous year. Among these holdings, that in Selection Trust has been reduced to 23.8 per cent from 28.1 per cent a year ago while a sizeable sale has been made of shares in Union Corporation.

At the same time Charter is seeking to expand its UK industrial earnings base in order to achieve a more equal balance between industrial and mining investments and between UK and foreign earnings; last year South Africa provided 57.9 per cent of revenue while 32.3 per cent came from a relatively smaller percentage of assets in the UK.

Mr. Hofmeyr ventures a forecast of current year's prospects but the revenue pattern of winners and losers may not be greatly changed. On this basis a

further modest rise in profits appears to be on the cards. The shares were 139p yesterday.

Tara's debts

CANADA'S Tara Exploration and Development has tentatively agreed with the Toronto-Dominion Bank for a revised repayment schedule of the senior debt of the 75 per cent-owned Tara Mines which operates the big lead-zinc project in Ireland.

At yesterday's Toronto meeting, the Tara president, Mr. Michael McCarthy, gave no details but said that the repayment plan would be in line with current metal prices and revised cash flow projections.

The major portion of Tara Mine's senior debt advanced by the Toronto-Dominion banking consortium totals US\$108.5m (£39.1m).

Tara Exploration is 10 per cent owned by Northgate Exploration which also held its annual meeting in Toronto yesterday. The president, Mr. Pat Hughes, said that after the profits setback in the first quarter of this year which reflected low production at the Tynagh lead-zinc mine in County Galway, output had recovered in the second quarter.

It is running at an average of about 50,000 tons of ore a month which is the level needed in order to avoid operating losses. Mr. Hughes mentioned the group's various exploration activities, but had little to say regarding the Irish uranium exploration of the group's 24 per cent-owned Anglo United Development.

KALGOORLIE SOUTHERN

Australia's Kalgoorlie Southern Gold Mines has now averted the threat of a winding-up. The suspension of trading in the shares has also been lifted following shareholders' approval of the purchase for \$1.8m (£1.1m) of a 50 per cent stake in Three Springs Gold from Universal Mining. The Springs earned \$512,000 in the year to last June.

Western Mining owns the other half of the sale producer. As already announced, Western Mining and Gold Mines of Australia have sold their respective interests of 50.83 per cent and 27.17 per cent in Kalgoorlie Southern to Universal Mining of Perth and are waiving debts owed to them by Kalgoorlie Southern.

Kalgoorlie Southern faced a winding-up following the lack of

success in Western Mining's efforts to find under acceptable conditions a joint venture for the company's gold mining leases in Western Australia. These leases remain intact and unencumbered under the latest deal.

TWO MORE JOIN W. AUSTRALIA'S DIAMOND RUSH

Australia's Haoma Gold Mines with North West Mining have joined Western Australia's diamond rush. They have been granted three large temporary reserves in the West Kimberley goldfield, reports our Perth correspondent.

The areas involved cover 524 sq km and a Haoma announcement describes them as being "adjacent to Cordine Riolite on Australia's diamond tenements in the Lennard River area." Indeed, one of the five areas is within a block being worked by the Ashton joint venture which CRA is heading.

Haoma and North West plan an airborne geophysics survey over the area. Carr Boyd Minerals is working nearby, and the group that includes Otter, Spargo and Rambou Creek is operating further south around Nullagine in the Pilbara.

Among the international groups that have followed the Ashton group and Anglo American Corporation subsidiary, Stockdale Exploration, is the diamond search Selection Trust and Amex. Diamond prospecting has developed into a mild frenzy reminiscent of the 19th-century gold boom times, helped by rumours that the Ashton joint venture has discovered diamonds of gem quality.

HYUNDAI COAL

Hyundai International of South Korea has applied for Australian Government approval of its plan to mine coal in New South Wales, jointly with White Industries of Australia.

A spokesman for Australia's Ministry of Energy and Resources said that the Government would favourably consider the plan which calls for investment of \$65m (£28m) including \$10m in equity investment.

The Government has been encouraging Korean firms to mine coal overseas to supply domestic power plants. One source said that White Industries will control 50 per cent of the joint venture and Hyundai, 20 per cent.

BIDS AND DEALS

Mystery approach to J. B. Eastwood

BY JAMES BARTHOLOMEW

Shares of J. B. Eastwood were suspended at 90p yesterday following a bid approach from an undisclosed source. The suspension price values the eggs and poultry company at £11m.

In the stock market the first name to come to mind as the likely bidder was Imperial Group which has substantial broiler chicken interests already. But Imperial's stake in this field could be a fairly sizeable company which knows the area and can afford to view the ups and downs philosophically.

Imperial Group is the only company which would be likely to run into monopoly difficulties. No other company has more than 5 per cent of either the eggs or poultry markets. Eastwood claims to have 14 per cent of the former and 13 per cent of the latter.

Lesney expands further in U.S.

Lesney Products and Co. is making further inroads into the U.S. toy market with the acquisition of most of the assets of AMT Corporation, a publicly-traded manufacturer of plastic model kits, for \$5.65m (£4.8m) cash.

Plastic kits account for around a per cent of Lesney's current group sales, and currently sell within a price range of 44p to £2.50. The acquisition will add a range of toys in the more expensive bracket—from \$2 to \$15—and, according to Mr. P. M. Tapscott, chairman, lift the share of plastic kits to 15 per cent of group sales.

At present around a quarter of Lesney's profits come from the U.S., which represents half the free world's toy market.

As a result of the acquisition, Lesney hopes to be able to improve its profit margins on plastic kits in overseas markets. Up to now it has been expensive to ship plastic kits—a low weight but high volume toy. Now, Lesney will be able to fly moulds across the Atlantic in both directions and manufacture the entire range locally.

The acquisition is being financed by a medium-term dollar bank loan in the U.S.

AMT's directors will liquidate the corporation and Lesney's U.S. subsidiary, Lesney Products Corporation, will acquire all of its assets with the exception of a factory at Troy, Michigan, with effect from August.

For 1977, AMT's group sales totalled \$13.88m (£16.7m), repre-

perhaps a North American company.

The poultry industry has not been healthy recently—except in comparison to the red meat business. But recently there have been signs of improvement. Meanwhile, eggs have had a difficult time and are regarded as a tricky cyclical business. The bidder therefore respected the industry's cyclical nature and can afford to view the ups and downs philosophically.

Imperial Group is the only company which would be likely to run into monopoly difficulties. No other company has more than 5 per cent of either the eggs or poultry markets. Eastwood claims to have 14 per cent of the former and 13 per cent of the latter.

Lesney expands further in U.S.

Lesney Products and Co. is making further inroads into the U.S. toy market with the acquisition of most of the assets of AMT Corporation, a publicly-traded manufacturer of plastic model kits, for \$5.65m (£4.8m) cash.

KWIK-FIT (TYRES & EXHAUSTS) HOLDINGS LIMITED

"A year of record turnover and profit"

Extracts from the Statement of Chairman, Mr Alec Stenson.

"Group profit before tax for the year ended 28 February, 1978, amounts to £947,076 (including a surplus of £142,211 arising from the disposal of discontinued operations). This compares with £513,588 (including £11,139 from J. C. Baker Ltd, a subsidiary disposed of during 1977/78) for the previous year."

"Total dividend up to 0.89p net per share, compared with 0.7p net for the previous year."

"Capitalisation issue of 1 ordinary share for every 5 held."

"Turnover for tyre and exhaust retail division increased by 51% and profit by 96% compared with last year."

"Van Rooy Dorsman, the Dutch subsidiary, made a significant contribution to the Group's profits."

"1978/79 Outlook - sales through the Kwik-Fit retail outlets for the first quarter of this year show an increase of approximately 50% over last year. 10 new depots are presently in various stages of development, and new sites are continually being sought as part of the expansion programme to extend the Kwik-Fit service throughout the United Kingdom."

Copies of the Annual Report and Accounts for the year ending 28 February 1978 can be obtained from the Company Secretary at Head Office, East Main Street, Bromley, West London.

DALGETY PAYS £6.9M FOR MALTINGS

Dalgety has fulfilled a plan to use part of the proceeds of its £12m March 1977 rights issue to increase the malting capacity of its subsidiary, Associated British Maltsters, by acquiring the maltings of Inver House Distillers, a UK subsidiary of the U.S. based Publicker Industries.

The sale was disclosed last Monday but the price of £6.9m was not revealed until Dalgety issued a formal statement yesterday.

A recent study by the broking firm Hedderwick Stirling Grumbar and Company suggested that demand for malt for brewing will grow at a rate of 2 per cent a year for the next seven years while the demand from malt whisky distillers will be running at 5 per cent.

The acquisition, which will complement Dalgety's existing Scotland-based plant will increase total capacity by 50 per cent and position it to take advantage of the better growth trend from malt whisky distillers.

ASSOCIATES DEALS

Hedderwick Stirling Grumbar and Co. bought 30,000 Wood and Sons (Holdings) ordinary shares at 34p on behalf of associates of Newman Industries.

Customagic chairman quits Mooloya Board

Sir Cecil Burney is to resign as a director of Mooloya Investments with effect from the middle of a £1m bid for Customagic. Sir Cecil is also chairman of Customagic which has been split by the 20p-a-share offer.

Sir Cecil's resignation comes at a time when the City Take-over Panel has said that it is seeking further information from Mooloya regarding a contract with a Jersey consultancy company.

The contract refers to a £28,835 fee to be paid to G&S d'Eau for procuring the transfer of 1.4m shares to Mooloya from certain Customagic shareholders—including four members of the Terry family who have then controlled a 26 per cent stake in Customagic.

Mooloya has also entered into an agreement with Mr. Maurice Prax, a Jersey consultant who is to make his services available to Mooloya for £7,500 a year fee conditional upon Mooloya acquiring over 50 per cent of Customagic.

The agreement to run for five years states that Mr. Prax's services will not be required outside of Jersey and in the event of his death his fee will be paid in full to his estate.

On April 30 this year Mr. Prax initiated an agreement by which Mooloya conditionally acquired 658,000 shares in Customagic, representing a 121 per cent stake. Mooloya currently holds a 47 per cent stake in the company, including the Terry family interests.

A further agreement involves Mr. Bernard Terry who is to accept the appointment of director for Customagic's Mail Order division, for £15,000 a year, the agreement to run for six years and provided the bid goes unconditional.

The bid has caused a split between the Terry family and other directors of Customagic, including Sir Cecil Burney, who are opposed to the offer.

REDMAN/SPOONER

A former chairman and managing director of Spooner Industries has endorsed the Redman Heenan offer of 63p cash for each Spooner share. Redman's chairman, Mr. Angus Murray, claims in a letter to Spooner shareholders. But while it may have the endorsement of a former Board member Redman has the implacable opposition of the present Board, which has described the offer as "completely inadequate and totally unacceptable."

The detailed reasons for the present Board's rejection of the offer will be circulated to Spooner shareholders in the near future but essentially they relate to the fact that the price is below current book asset value of 69p a share, below the revamped asset backing and at a p/e of 6.8 Redman would be buying earnings very cheaply.

Mr. Murray points out that Spooner's profit record over the past decade has been erratic and that the prospect for the latest year's result was an improvement on last year but the size is uncertain. He adds that this "indifferent

performance has been reflected in the market value of the shares over the last five years." The highest price after adjustment for scrip issues was 62p in 1973.

Mr. Murray produced the traditional assets can only be assessed by reference to the level of profits consistently earned by them" to counter the argument that the offer is below the net tangible asset backing.

Advice to help small companies

THE WELSH Development Agency is to expand its help and advice service for small companies.

Its Small Business Unit will provide a counselling service on business life to assist companies employing fewer than 200 people.

performance has been reflected in the market value of the shares over the last five years." The highest price after adjustment for scrip issues was 62p in 1973.

Arbuthnot Latham

Preliminary results for the year ended 31st March 1978

"The group's profit for the year, after taxation, totalled £1,395,000 (1977: £1,053,000). After taking into account the share of profit of associated companies and deducting loan interest and minorities, the attributable profit, before extraordinary items, works out at £1,097,000 (1977: £928,000), an increase of 18 per cent over last year."

We are proposing to pay an increased final dividend of 6.23p per share, which is the maximum allowed under current legislation.

Mr. B. M. P. Thompson-McCausland and Mr. F. C. Saville have been appointed deputy chairmen of Arbuthnot Latham & Co., Limited, the merchant bank, which produced increased profits after taxation and transfer to inner reserves.

Arbuthnot Insurance Services, which comprises the group's insurance broking interests, had another record year while the investment division also contributed to the growth in non-banking earnings.

Over the last two years, total profits of the group, including acquisitions, have increased by nearly 60 per cent, whilst earnings per share show an increase of 17 per cent over the previous year."

A. R. C. Arbuthnot, Chairman

The Annual General Meeting will be held on Thursday, 27th July, 1978. Copies of the Report and Accounts will be available after 5th July from the Secretary, Arbuthnot Latham Holdings Limited, 37 Queen Street, London EC4R 1BY.

'The Clothing Transport people'

Clothes on hangers or in cartons

Reserved storage areas

Efficient warehouse call-off systems

is too simple a description of the services we offer.

These extend well beyond the movement of clothes on hangers for which we are best known.

We also carry them in cartons. And offer short and long term warehousing facilities with garment call-off systems if required. For multiples, this provides an economic alternative to holding back-up stock at branches. With Tibbett & Britten rapidly replacing garments sold, the floor space saved can be more profitably used to extend the selling area. Equally, clothing manufacturers and shippers rely on us to handle all their warehousing and distribution.

Whilst operating a regular distribution network, costed on quantity and distance, we also offer contract rates for bulk and will gladly set up special collection and delivery systems to suit our clients' needs.

Security is an essential of our service. Our record in this is unrivalled by any other transport system.

Wedgwood expansion on target—100% scrip Edbro recovers in second half Boots set for further capital investment

MOST OF Wedgwood's recently extended manufacturing facilities are now in production and beginning to make a useful contribution to output, Sir Arthur Bryan, the chairman, says in his annual statement. Other expansions are also either in the course of building or under negotiation.

Provided there is no return to excessive cost-push inflation, the company expects to achieve its ambitious targets set for its factory and sales forces in the current year, he says.

Wedgwood is making a one-for-one scrip issue, and dealings in the new shares are expected to begin on July 24.

Previously reported, pre-tax profit in the April 1, 1978 year advanced 8 per cent to £8.35m after extraordinary losses of £0.77m (£1.24m profits).

The weakness of the American dollar had a considerable bearing on the sales figure of £73.4m, a short of target, Sir Arthur says.

During the year its share of world markets increased, particularly in the U.S., Canada and Europe.

A current cost statement shows the profit for the year up to £8.35m (£1.24m) after extraordinary losses of £0.77m (£1.24m) and a stock replacement of £1.75m (£1.24m) offset by a £0.51m (£0.24m) gearing adjustment.

At year-end fixed assets were £22.29m (£17.45m) and net current assets £20.11m (£15.9m).

Meeting, 34 Wigmore Street, W.1, July 19 at 11 a.m.

GA partner in Saudi Arabia venture

A new insurance company, Pan Arabian Insurance Co., has been formed jointly by General Accident Fire and Life Assurance Corporation and Sheikh Abdul Karim El-Kheraji, the principal of the International Corporation for Trade and Contract Services, insurance agents in Saudi Arabia.

The new company is a joint operation in which the Sheikh has the majority shareholding, while General Accident and the Insurance Company of North America hold substantial minority interests.

The new company, with headquarters in the "El-Nile" building, Damman, will write all classes of insurance, including fire and allied lines, ocean and inland marine, contractors' all risk, general liability, workers' compensation, accident, crime and motor.

Interest in the new company, with headquarters in the "El-Nile" building, Damman, will write all classes of insurance, including fire and allied lines, ocean and inland marine, contractors' all risk, general liability, workers' compensation, accident, crime and motor.

Pan Arabian will be represented by the International Corporation for Trade and Contract Services, an agency which has represented General Accident in Saudi Arabia since 1975. The agency's headquarters are also in Damman and it has branch offices in Riyadh and Jeddah.

Brit. Steam advances to £2.27m

A SECOND half advance from £1.05m to £1.26m at British Steam Specialities Group lifted the full year's figure to March 31, 1978, from £1.78m to a record £2.27m on turnover of £31.14m against £27.34m.

Share earnings per 20p share are 11.5p (8.4p) and the dividend is effectively raised from 4.6p to 5.13p net with a final payment of 5.63p. Also proposed is a one-for-one scrip issue.

Tax for the year took £1.13m (£0.97m) and the amount retained came out at £0.8m (£0.4m) after an extraordinary credit of £25,000.

The group manufactures and supplies pipeline equipment.

Vectis Stone well ahead at midway

Including three months' results from Celtic Oil Supplies, taxable profit of Vectis Stone Group climbed from £128,518 to £208,406 in the March 31, 1978, half-year on turnover up £3.23m to £8.95m.

Directors say the group has continued to be busy during the summer and that profits for the full year are expected to be well in excess of last year's record £404,202.

First-half profit is subject to tax of £110,750 (£84,125).

The interim dividend is up from 0.6p to 0.7p net per 10p share. Last year a 0.884p final was paid.

Group interests include gravel extraction and tarmacadam manufacture, civil engineering, plant hire and petroleum products distribution.

Beechwood £88,745 downturn

A second half fall of £27,626 at Beechwood Construction (Holdings) followed a first half downturn from £105,641 to £184,222 and for the full year ended March 31, 1978 the civil engineering group recovered in the latter half and finished the year to March 31, 1978, ahead from £3.61m to £3.66m.

Earnings are shown at 44.5p (51.1p) per 25p share before tax of £0.99m (£1m), and 32.3p (37p) after tax. The issued capital was increased by 105,684 shares on the acquisition of Longman Machinery Supplies last September and by 1,05m shares on the acquisition of Edbro (Scotland) last November.

The net final dividend, based on a 33 per cent tax rate is £2.27m (£1.26m) permitted 6.3135p (5.6343p) total.

The directors say that in the absence of further Government guidance, the final dividend will be increased to 7p per share, making a total of 9.0301p by the declaration of a second interim payment on August 1 of £7.155p.

If the rate of tax remains at 34 per cent and there is no change in dividend control the proposed final will become £2.206p, the maximum permitted under current legislation.

After interest and management expenses of £335,400, against £427,600, pre-tax income of the Trans-Oceanic Trust improved from £27,600 to £53,400 for the six months to April 30, 1978.

Available revenue was higher at £332,100 (£262,100). An interim dividend of 1.5p (same) net has already been paid in the current year—last year's final was 2.5p from 1962/00 taxable revenue.

Net asset value at the half-year is shown at £23.8p (£21.6p) per 25p share and assuming full conversion, at £27.4p (£26.7p).

After interest and management expenses of £335,400, against £427,600, pre-tax income of the Trans-Oceanic Trust improved from £27,600 to £53,400 for the six months to April 30, 1978.

Available revenue was higher at £332,100 (£262,100). An interim dividend of 1.5p (same) net has already been paid in the current year—last year's final was 2.5p from 1962/00 taxable revenue.

Acquisitions which all came in the second half, taxable profits would have been nearly 10 per cent down but the company has incurred redundancy payments of £200,000. Lack of orders, short time working and industrial unrest hit the first six months but an all round improvement, both at home and overseas, helped make up much of the shortfall.

Two trends are apparent in Edbro's future growth pattern. First, the company is now concentrating on a narrower range of products rather than producing to customer specifications. This involved the purchase last year of a new warehouse in Manchester and some further increase in stocks which has pushed the overdraft up to £2m, although this is still only 16 per cent of shareholders' funds. Secondly, Edbro's long term strategy is for more automation; capital expenditure on plant and equipment next year is likely to exceed £1.5m. With three-quarters of the home market for hydraulic tipping gear already under its belt, Edbro's thrust will have to be in the tough overseas markets where penetration is weak. At 199p the shares still have potential on a p/s of 4.5 and a yield of 6.1 per cent.

THE STRONG financial position of the Boots Company is emphasised by Mr. G. I. Hobday, the chairman in his annual report. The group will continue to invest in improving and extending facilities to make use of any opportunities, he says.

This will place the group in a very good position "at the time when recession is behind us and our customers' spending potential is restored," Mr. Hobday adds.

The indications are that consumer spending will become more buoyant in the UK during the current year and the group is well poised to take full advantage of this in its stores.

The substantial capital investment programme continues to be directed towards increasing Boots' share of important retail and industrial markets in the UK and the world at large, particularly the EEC and North America.

A record £36m was approved and committed during the year for capital investment projects in the UK and abroad. However, actual expenditure, although higher than the previous year, was lower than planned owing to delays and some difficulties in the building industry, the chairman says.

Future capital expenditure approved by the directors but not shown in the accounts, is placed at £38.8m (£22.8m) and contracts not placed, £17.2m (£8.8m).

For the year ended March 31, 1978 pre-tax profits were up from £91.1m to a record £107m on sales of £382.8m (£275.5m). The dividend is 2.085p (£2.785p). A current cost statement shows a depreciation adjustment of £10.9m, cost of sales, £9.7m and a gearing adjustment of £1.9m lowering the pre-tax profits to £88.5m.

The group's own brands continue to grow, says Mr. Hobday. During the current year, new laboratories will be opened at a capital cost of £1m to assist in the quality control of own brand developments.

Capital investment in new shops has remained at a high level and amounted to £21m. A total of 37 chemist shops will be replaced or enlarged, with new stores being opened in Manchester, Tunstun, Kettering, Leamington Spa and Colchester.

On chemicals manufacture, the chairman says it is now impracticable to contract further plants on the Nottingham site and agreement was recently reached to buy land at Crumlinston, Northumberland on which future chemical manufacture will be sited in the UK.

During the year, work was started on a new extension to the group's laboratory facilities to provide a significant increase in space available for medical and pharmaceutical research teams.

The integration of Rucker Pharmaceutical Company of the U.S. is proceeding satisfactorily and the development of this company into a vehicle for the marketing of Boots products in the U.S.

INTERNATIONAL FINANCIAL AND COMPANY NEWS

Merger proposed by two major Dutch contractors

BY CHARLES BATCHELOR

TWO DUTCH construction companies, Stevin Group and Royal Adriaan Volker, are considering a merger which would result in the third largest construction company in Europe.

The companies, which in the past have been involved in many joint ventures all over the world, had a combined net income last year of some \$82m. Their combined sales in 1977 were \$1,266m, while year-end order books totalled \$1,676m.

The first round of talks has been completed. The two companies' combined workforce is 22,000. Initial talks have been held with the unions and the works councils. In accordance with the Dutch merger code, the Social Economic Council and the Economics Ministry have been informed.

Stevin expects turnover to be

little changed this year. The company took on its present form through the merger of several building groups in 1971. Stevin's largest shareholder, the Dutch businessman Mr. Pieter Heerema, was informed yesterday of the merger plan and the company has the impression his reaction was positive, a Stevin official said.

Mr. Heerema, who surprised the company in February with the disclosure of a 42 per cent shareholding, has not been involved in the discussions. It expects to at least maintain its position in the current year. The company has been particularly active in seeking new partners and is currently holding talks

AMSTERDAM, June 22.

with HVA, a group with interests in consultancy and agro-industrial projects. These talks, aimed at a possible integration of some activities, are unaffected by today's announcement, Volker said.

HVA is still adjusting to the nationalisation of its extensive operations in Ethiopia three years ago.

The form of the merger between Stevin and Volker has not yet been decided, but the intention is to leave both companies with an equal status. While Volker's talks with HVA are formally aimed at "the integration of parts" of their operations, a complete merger is not excluded.

The shares of both Volker and Stevin, suspended on the Amsterdam Stock Exchange today, are expected to be requested tomorrow.

Small rise in profit at Shell Australia

BY JAMES FORTH

SYDNEY, June 22. SHELL AUSTRALIA, Dutch-owned and the largest producer and distributor of petroleum products in the country, lifted earnings only 3 per cent, from A\$52.5m to A\$54.1m (U.S.\$61.9m) in 1977. The profit improvement lagged behind sales, which rose 17.6 per cent from A\$813m to A\$956m (U.S.\$1,098m).

The return on shareholders' funds fell slightly, from 10.9 per cent to 10.7 per cent, reflecting the higher capital investment made during the period, a large proportion of which did not generate income in 1977.

In the previous year earnings rose A\$15m. However, the chairman, Mr. L. T. Froggatt, warned in July last year that industrial disputes and plant breakdowns in the last quarter of 1976 had led to shortfalls in production. These had had to be met by high costs imports, and would affect the results in the first quarter of 1977.

The results of the main operating company, which supplies and markets Shell petroleum products, fell from A\$44.1m to A\$42m. But the directors considered that this sector of the group's business had enjoyed a successful year given the flatness of the economy and Government control on prices.

The directors pointed out that if current cost accounting had been adopted the group profit would show a rise of 46 per cent from A\$22.3m to A\$32.65m.

ISUZU MOTORS

Caution after a half-year surge

BY YOKO SHIBATA

THE LATEST half-year results from Isuzu Motors, one of Japan's smaller truck and passenger car manufacturers and a 34.2 per cent-owned associate of General Motors of the U.S., are a good deal better than forecast. Current profits are Y3bn ahead of target and the net level Y2.5bn over for the business term ended last April. On the strength of brisk exports of small sized trucks to GM and a sales recovery of large-sized trucks with high added value as a result of the active expansion of public works since the end of last year, Isuzu Motors' current profits

shot up by 86.7 per cent to Y12,666m. Net profits ended 165 per cent higher at Y7,392m, on sales of Y278,70m, up 22.4 per cent over the same period in the previous fiscal year.

Isuzu is a recovery situation. In October 1977, the company resumed dividends for the first time in seven years.

The number of vehicles sold in the half-year under review rose by 13 per cent to 22,600 of which exports accounted for 56 per cent in unit terms.

According to the company, the improvement in operating ratios

offset an increase in fixed costs; management also achieved a Y2.5bn reduction by streamlining production lines.

Isuzu's exports in value accounted for 36 per cent of total sales.

In terms of value, Isuzu's exports accounted for 36 per cent of the sales total. Since most of Isuzu's exports were involved in yen, direct exchange losses on its exports were marginal. However, the company's overseas distributors requested reductions on transfer prices to compensate for yen revaluation which cost it Y1.4bn.

TOKYO, June 22.

For the current six month period the company expects to suffer an additional cost burden of Y3bn for the same reason. As a result, current earnings are likely to show a fall during the second half of the business year. Profits for the year as a whole, however, should still show a rise of 40 per cent over 1976-77.

Despite the improvement Isuzu is cautious, citing uncertain future business prospects and insufficient international reserves. It plans to declare an unchanged dividend of Y4 per share of Y50 par value this year, including an interim dividend of Y2.

Asahi Insurance reconstruction

BY OUR OWN CORRESPONDENT

THE FIRST radical management reconstruction of a Japanese insurance company since the war realised capital gains in its operating earnings this year and is to be undertaken by Asahi Fire and Marine Insurance. Steps to be taken include replacement of its top management team, merger with a larger insurance company, and a possible.

The company has run into problems following the sharp reversal, two years ago, of its Japanese Government's traditional policy of protecting small insurance companies. Analysts said reconstruction moves were possible at Japan's six smallest non-life insurance companies. Asahi's operating expenses are 45 per cent of its premium income, the highest proportion of all Japan's 20 non-life insurance companies. Premium income was Y22.6bn in 1976. Japan's six smaller insurance companies have traditionally performed better than Asahi, with operating expenses as a ratio of operating income of 28 per cent.

Asahi suffered an underlying loss of Y1.7bn (\$8m) last year, according to the Nihon Keizai Shimbun newspaper. The company is expected to receive aid until two years ago by

TOKYO, June 22.

allowing them to introduce new types of insurance ahead of other insurers, and to keep insurance premiums relatively high. But under pressure from consumer groups for lower premiums and from Foreign companies for liberalisation of the market, the Government has changed its policy. Officials now say that small companies which cannot keep up with the industry should merge with others which can.

Asahi's three largest shareholders are Nomura Securities, the Japan National Railways, and the Daiwa Bank. The president of the three have endorsed reconstruction moves, including reorganisation of the company's branches, reduction of other expenses, and channelling of insurance business to the company by the three shareholders. The Bank Bumiputra Malaysia, the Amsterdam-Rotterdam Bank, and the Societe Generale de Banque nationale railroad's business are already, but its problems are not reported to be linked to those of the railroad.

Agreement on Sasebo HI

TOKYO, June 22.

A SYNDICATE of 18 Japanese banks and major shareholders in Sasebo Heavy Industries Company have agreed on full co-operative efforts to salvage the shipyard from financial difficulties.

The agreement emerged from a meeting of banks and shareholders to bring to a conclusion three-month-old negotiations, in which the Government has intervened.

Following the agreement Sasebo appears well placed to obtain Y8.3bn for severance pay to 1,600 of its 6,600-strong work force. The workers are being laid off under a three-year reconstruction programme proposed by the Transport Ministry.

The Japanese Finance Ministry is considering applications from the Amsterdam-Rotterdam Bank, the Societe Generale de Banque nationale railroad's business are already, but its problems are not reported to be linked to those of the railroad.

Earnings fall at Michelin

By Our Financial Staff

NET PROFITS a tenth lower on a rise of almost an eighth in sales are announced by Michelin. Group earnings have dipped to FF 875m (\$148m) for 1977 from FF 754m with the company's tyre and rubber interests turning in net profits sharply lower at FF 354m against FF 115.4m. Group turnover last year was FF 18.1bn compared with FF 16.2bn with cash flow emerging at FF 2.37bn against FF 2.43bn.

Cardo beats forecast

BY OUR OWN CORRESPONDENT STOCKHOLM, June 22.

CARDO, the investment company which owns the Swedish sugar refinery, increased its earnings by 44 per cent during the financial year ending April 30. The preliminary figures show a pre-tax profit of SKr 187m (\$40.7m) on a turnover of SKr 1.2bn (\$260m), up by 14 per cent.

The Board proposes to pay a dividend of SKr 5.75 a share on the increased share capital, making a total payment of SKr 27.9m against SKr 24.3m the previous year. The corresponding dividend in 1976-77 was SKr 5.

The result is higher than the SKr 181m forecast at the eight-month stage. The improvement over 1976 derives from the sugar company, which benefited from a larger sugar beet harvest, a higher sugar content, increased output and larger exports.

Earnings of the Hillshoez seed company, which has been a steady profits earner for the group, dipped slightly due to higher seed costs and continuing investment in research and development.

Sharp falls in Eurodollar bond markets

BY MARY CAMPBELL

THE Eurodollar bond market fell very sharply yesterday while all other sectors, although less badly hit, were also weak. The D-mark sector fell slightly under the impact of a second consecutive very weak day on the German domestic bond market. Sterling denominated Eurobonds were about 11 points down.

Two new dollar issues were offered yesterday however, a \$20m placement for the Danish Cement company E. L. Smith and a \$25m floating rate note for Arab International Bank.

The F. L. Smith placement offers 94 per cent for ten years (average life 6.53). The coupon is payable semi-annually, apparently, because that suits the borrower's cash flow. Chase Manhattan Ltd. is lead manager.

The \$25m offering for Arab International Bank is for five years. The interest rate will be 1 per cent above LIBOR or 61 per cent whichever is the higher.

Managers are UBAF and Libyan Arab Foreign Bank. The latter owns a substantial minority of the Arab International Bank, with the rest being owned by Egyptian investors. There is a management group of some 15 banks.

The Deutsche Mark domestic market was weak for the second day running as the Federal Government tried to sell schuld-scheine at rates somewhat above the market generally. This was interpreted to indicate that it is well below target on financing its deficit. Yesterday the Bundesbank bought some DM 200m of bank bonds, some DM 200m of Federal government bonds following DM 160m of purchases on Wednesday to help support prices in the domestic market.

The Deutsche Mark foreign bond market was weak in these circumstances though by no means as weak as the domestic market.

Indonesia. In addition to the previously reported Y30bn for Electricite de France, there will be a Y30bn issue for Spain and a Y20bn issue for Pemex in September.

Reuters reports from Tokyo that these bring the total value of issues in the first half of the Japanese fiscal year (April-September) to Y58.2bn (\$2.7bn) up from Y12bn in the same 1977 period.

A new floating rate certificate of deposit (FRCD) issue was launched yesterday in the Asian dollar market while the Industrial Bank of Japan has more than doubled the size of the issue it launched a week ago in London.

The new issue in Singapore is \$15m for Overseas Union Bank. The three year issue will pay interest at a quarter of a point above Singapore inter-bank offered rate via Singapore Nomura Merchant Banking and Asian American Merchant Bank.

New Cho Jock Kim bid for FEDH minority

BY H. F. LEE

SINGAPORE, June 22.

THE SINGAPORE hotelier and publisher, Mr. Cho Jock Kim, is making a fresh attempt to buy out minority shareholders of Far Eastern Hotels Development (FEDH)—the owner of the Singapore Hilton.

FEDH said today that it has received a formal notice of a takeover offer from FEP Investments Private Limited (Fepil) to acquire 18.82m shares of FEDH—the shares not held by Fepil, International Holdings Private Limited (IHL) and Mr. Cho Jock Kim—at \$5.18 a share in cash.

Mr. Cho—who is also chairman of FEDH—and his associates control IHL and Fepil, and collectively own 21.18m FEDH shares or 52.9 per cent of the

company's issued capital. In an earlier attempt, in October last year, Mr. Cho through another of his companies, Fep International Pte. (Fep), offered to acquire 18.32m shares held by minority shareholders, also at the price of \$5.18 per share in cash.

Fep International which is a subsidiary of IHL, however, failed to proceed with the offer within the statutory time limit as it was unable to complete financial arrangements with its bankers in time.

Mr. Cho then withdrew the offer and substituted it with another for the same shares, at the same price, but through the parent company, IHL, to "facilitate financial arrangements offer is not conditional upon acceptance being received in respect of a minimum number of shares. Chartered Merchant Bankers is acting for Mr. Cho, while FEDH has appointed Morgan Grenfell Asia to advise minority shareholders.

FEDH, which was put into receivership one-and-a-half years ago by the Overseas Chinese Banking Corporation over debentures worth some \$812m, is still in the hands of the receivers. The company was also involved in a protracted dispute with the Stock Exchange of Singapore over its accounts and a number of questionable transactions by the company. Trading in the Singapore International shares has been suspended since the January, 1976.

International Frozen Foods

The frozen food market has proved itself to be one of the most consistently expanding sectors of the grocery business. In virtually every developed country frozen food sales have grown faster than the total food market.

Sales keep on growing

By Elinor Goodman

When after the war Unilever and General Foods decided to abandon their joint venture in the British frozen food business, not even Unilever, which took over the Birds Eye name outside the U.S., was particularly optimistic about the potential for quick-frozen foods on this side of the Atlantic. Like many of the other companies which went into frozen foods in the early days, Unilever probably saw it more as a way of protecting its existing canning interests than a major growth area in its own right.

In Britain itself very few retailers had the equipment to sell frozen foods and only a minority of homes had refrigerators. Even in America, the country where Mr. Clarence Birdseye started it all with General Foods, the market was in the doldrums.

Thirty years later the frozen food market has proved itself to be one of the most consistently expanding sectors of the grocery business. For its part, Birds Eye has become one of the three

largest divisions in Unilever's operations, and ex-Birds Eye executives are now running frozen food companies all over the world.

In Britain alone the market is now worth over £700m and is expected to top the £1bn mark by the early 1980s. Worldwide, according to one estimate, the total market is now worth £20bn. Frozen food cabinets have become an integral part of every supermarket and a quick glance at any display cabinet will show just how far the range of frozen foods has developed since the days when quick freezing was largely seen as a means of offering seasonal products like rhubarb at unseasonal times of the year.

In virtually every developed country frozen food sales have grown faster than the total food market, and while sales in the established markets, like America and Scandinavia are no longer leaping ahead at the rate they did in the early days, they are still showing volume gains in most years.

Spending

Last year volume sales in Britain dropped sharply for the first time since the war but that had probably more to do with the relative cheapness of fresh produce than with the country's overall economic state. Internationally the business has not been entirely immune from the effects of recession—especially in those countries where per capita consumption is already high—but in most countries it has been less severely hit by cut-backs in consumer spending than other sectors of the grocery market.

In a world where convenience is becoming increasingly

important in the whole food market frozen foods are no longer generally considered the kind of luxury which can be dispensed with when money is short; indeed they often offer a cheap alternative when fresh food prices are high.

Frozen fish has become an international commodity, and thanks to the developments in containerisation frozen vegetables are shipped round the world. It is not only in this sense that the business can be described as international. Most of the companies which dominate the various markets around the world are multinationals. In Europe the big names are Nestle and Unilever. In some countries, like Britain, they compete against each other as well as with national groups like the Imperial Group subsidiary Ross Foods.

In other European countries like West Germany and Italy the two companies have formed joint ventures—which in the case of Germany have to fight strong local opposition. Increased competition could be in store for the future if the discussions between IIT and Heinz over the sales of IIT's European frozen food operations bear fruit. As a major canner, Heinz has long had its eye on the frozen food sector, which over the years has taken sales away from canned goods.

In America the market is more fragmented but again the names which dominate it include some of the biggest companies in the food business, like Green Giant, General Foods and Sara Lee.

As the Monopolies Commission found in its report on the British market, the frozen business is an expensive one to penetrate as a branded manu-

Source: Birds Eye

facturer. But this did not stop companies trying when the market was growing at 20 per cent or more a year. Behind the Nestle subsidiary, Findus, which supplies with Ross as Britain's second largest frozen food producer, are a series of mergers which brought together four different companies over the years.

And though the three major British manufacturers—Birds Eye, Findus and Ross—account for well over half the retail market, there are many smaller companies around which, as the development of the home freezer market five years ago showed, can catch the big boys off guard.

The growth in sales around the world has not by any means always been matched by a frozen

foods, more than 10 growth in profits. Frozen foods are traditionally a high-volume, low-margin business. Despite the often close links with their suppliers, the frozen food companies are vulnerable to sudden swings in raw material prices. Moreover, as will be spelt out graphically at next week's International Frozen Food Industries Conference in London, the profits of branded manufacturers can be seriously undermined by competition from companies prepared to supply own brands foods at a discount.

America is still by far the largest market anywhere in the world. No other country can compare with it in either the volume of sales or the range of goods on offer. In 1976 the Americans spent \$28bn on quick

times as much as their nearest rivals the British. Per capita consumption was also way out in front at 35 kilograms per head as against 13.7 per cent in Britain and 18.7 per cent in Sweden, the country where Findus originated as an offshoot of a confectionery company.

The American market is generally considered to be at least 15 years ahead of most European markets, and even farther ahead of some of today's big growth markets like Japan. The American manufacturers adopted a huck-shot approach to new product development right from the start and bombarded the U.S. housewife with a huge variety of products. The result is that today, with a vast amount of retail cabinet space at their disposal, the American manufacturers offer a staggering range of frozen products. Just one Washington supermarket last week was offering no fewer than 68 different kinds of TV dinners and the space devoted to desserts alone would have accommodated the entire range of frozen foods sold in an average British store.

The growth in frozen food sales is obviously connected with the rise in living standards and a consequent increase in refrigerator ownership. But this does not entirely explain the different times at which different markets round the world have taken off. Urbanisation and the number of working wives also play a major part in determining demand. After the Americans, the Scandinavians were the first to discover the attractions of frozen foods, thanks largely to Findus's early efforts in Sweden.

The next in were the British and in the late 50s and 60s the

British market was increasing at the rate of 20 per cent or more—and that was without 1970s style double digit inflation to bolster the figures. In the 1970s the British market has been given another boost by the increase in home freezer ownership.

The French and German markets did not really take off until about ten years ago, when in the case of France Nestle started investing heavily in the market. Now the markets showing the biggest percentage gains are those like Italy and Japan where per capita consumption is relatively low—though an increase of 1 per cent in the American market is still worth more than, say, a 20 per cent increase in the Irish market.

Distances

The growth rate is obviously partly dictated by the retail trade and the amount of space it is prepared to devote to frozen foods. A highly fragmented retail market like Italy does not lend itself easily to mass frozen food distribution. Nor of course do the enormous distances involved in distribution in countries like Brazil. In Britain Birds Eye is now concerned that future growth may be inhibited by the lack of back-up storage space in supermarkets, while the development of the catering market may well be restricted in the short term by the lack of adequate storage facilities for frozen foods.

But the most important factor in the British market over the last eight years has been big manufacturers in recognising

the increase in home freezers. It was not a development for which the American market had prepared the British manufacturers. In the US refrigerators had long been sold with ample storage space for frozen foods and the manufacturers had gone into big packs in the early days. American consumers buying foods for their freezer compartments either went to their usual supermarket or had it delivered to their homes. In Britain none of the companies involved in the frozen food industry—whether refrigerator manufacturers, food companies or established retailers—was really prepared for the way demand for freezers suddenly took off. Families bought huge coffin-sized freezers and looked around for suitably scaled packs to fill them. To begin with, it was not generally the established companies which filled this need.

In the High Street Bejam pioneered the concept of the specialist freezer centre which sold both freezers and the food to fill them. A number of other chains sprang up with similar kinds of stores, while independent freezer centres, some of them operated by farmers and other producers, also proliferated. Of the big supermarket chains the Co-op was the first to get the message but it was not until about three years ago that the supermarkets really started making in-roads into the specialist freezer centre's share of frozen food sales.

And just as the established supermarket groups were slow to see the potential of the home freezer market, so to were the big manufacturers in recognising

New from York, the GRP Fridgemaster. As different from ordinary reefers as Freightmaster is to ordinary vans.

Optimum insulation, optimum cube, optimum hygiene. And a saving of up to 3/4 ton.

How's it done?

Like its illustrious partner the Freightmaster, the Fridgemaster is a very simple, basic concept.

The trick has been to manufacture a self-strengthening body thus dispensing with a chassis.

And in the process meet the most severe class of ATP standards of insulation and hygiene.

Thinking ahead.

The Fridgemaster has been designed to meet current and anticipated International requirements.

And the Fridgemaster is built to last.

A prototype completed the equivalent of five years' very heavy-duty trucking on the test track of a major motor manufacturer, without a single service other than routine checks.

'Investment' is an over-used word in relation to capital goods, but it is justified in relation to Fridgemaster.

Pure strength.

The walls, roof, the front bulkhead and the doors are all at least 75mm (2 15/16") polyurethane foam sandwiched in GRP. No breaks, no sidewall rivets, and no leakage.

Each panel is therefore an incredibly strong integral piece. (By way of illustration, the roof had 16 tons hung from it on hooks and only bowed 5mm—3/16"—in the middle.)

Attention to detail.

The secret of high thermal efficiency lies in the retention of cold air and the prevention of moisture ingress.

So, at every 100mm in the polyurethane foam there is a resistant barrier to localize any deterioration in the event of accidental damage.

At every vulnerable point there's a positive double sealing between the foam and the atmosphere. All four edges of the foam are vapour sealed.

The floor uses two 500 gauge (.23mm) polythene sheet water barriers which sandwich the 100mm foam block, itself surface sealed with its own vapour barrier.

A steel underpan the length of the van protects the polythene

sheet barrier from flying stones and gravel.

Operating theatre cleanliness.

In the construction, specially designed continuous sealing strips and cornice sections give both a compression seal and an edge seal, to keep moisture out and stop dirt traps from being created.

And the door is a one-piece, specially moulded unit.

Each door has four-sided outer door seals and a wedge type interior seal which restricts heat gain to the cargo area.

(The cargo area which is steam cleanable has no exposed timber to rot and breed bacteria.)

Even more attention to detail.

As an example of the lengths we go to to cover all contingencies, York have built an intricate system of ducts into the polyurethane foam.

Air and electric lines are therefore easily accessible. A minor detail, but one day it could be a vital one to a customer.

The ultimate reefer?

The GRP Fridgemaster not only fits in with the regulations, it fits in with you. We have a range of options which make it the perfect match for all your load patterns.

There are four self-draining floor options: extruded aluminium top hat, 32mm or 50mm T section, or PGP plate.

The Fridgemaster can be yours.

In the configuration you want, and with the cargo fixings you want.

Ring today to see the ultimate reefer.

INTERNATIONAL FROZEN FOODS II

The British market

LAST YEAR the volume of frozen food sales in Britain fell by around 4 per cent—the first significant decline since the market took off in the early 1950s. It was not so much a reflection of Britain's economic state but a reminder of the simple fact that sales of frozen vegetables can be very badly hit if there are plentiful supplies of cheap fresh produce around. And vegetables, together with fish, account for well over half the British frozen food market.

The result was that manufacturers started this year overstocked and sales of vegetables so far this year have not been very encouraging. For Birds Eye, the Unilever subsidiary which is Britain's largest frozen food producer, the year began badly with a prolonged strike at one of its factories, and in its annual review the company talked of the concern in the industry about the ability of frozen food manufacturers to earn the returns from their investments which were anticipated in the heady days of the late 60s and early 70s when the increase in home freezer ownership resulted in many new companies entering the market.

But if last year showed that frozen foods had lost their four star growth rating, it also showed the strengths of certain sectors of the market. While vegetable sales, which had been inflated the previous year by the drought, fell away, sales of prepared foods like cod in butter sauce and frozen cream cakes continued to increase. Even under financial pressure the British housewife was not prepared to sacrifice the convenience of foods like this.

These figures conceal the shake-up in the market for bulk packs. In this sector Ross, which has always been relatively strong in catering and only had a small vested interest in the standard pack market, has over 10 per cent of sales as against Birds Eye's 13.7 per cent, and Findus's 3.5 per cent.

Near the Birds Eye view is that last year's fall in sales was nothing more than a hiccup. In sterling terms sales increased to £700m in 1977 and the company is predicting that the market will be worth £1.2bn by the early 1980s, with products like cakes and snacks setting the pace. Even so, the rate of growth will be much slower than in the late 1950s and 1960s when the market was increasing at 20 per cent or more a year. The growth rate had slowed down by the beginning of the decade to 3 per cent in 1974. The following year sales increased by over 5 per cent in real terms as the shortage of fresh produce created by the drought sent people flocking to the frozen food cabinets for their vegetables.

In 1976 volume sales edged up further only to fall back to below their 1975 level the following year. The fall in sales, coupled with the intensification of the price war among the supermarkets last year, has meant that the big three manufacturers—Birds Eye, Findus and Ross—have come under increasing pressure. Surprisingly, in view of the American experience, there was no significant increase in the share taken by own brands—at least in standard packs sold through supermarkets—which remained at about 17 per cent, and the line-up of the leading manufacturers has stayed much the same despite the in-roads made into Birds Eye market share in some individual sectors.

Birds Eye's share of the market is far smaller than it was in the early sixties when it held over 60 per cent. But it still claims to sell over 47 per cent of all frozen food packed in standard sizes and sold in supermarkets. On this basis the Nestle subsidiary Findus is the second largest brand with just under 16 per cent and the Imperial Group frozen food company Ross is third with just over 4 per cent.

In 1970 only around 5 per cent of families owned a freezer, and it was only companies like Bejam which fully recognised the potential of the freezer market. Bejam, which this year celebrates its 10th anniversary, started opening shops which sold both freezers and the food to put in them. The food was sold in bulk packs and though some leading brands were stocked, the emergence of Bejam and other chains like Dalgety and the plethora of independent operators opened up the way for smaller frozen food producers to get into the market. (Ironically, it was shortly after this that the Government asked the Monopolies Commission to examine the market.)

It was not until about four years ago that the established companies—both retailers and manufacturers—really caught on to what was happening. The big supermarket chains like Tesco, Sainsbury and Co-op also started opening their own freezer centres—either in-store or as

free standing units. In the same freezers was almost 14 cubic feet. By 1976, it had fallen to 12.5 cubic feet. A similar trend to smaller processors, selling bulk packs specifically designed for the freezer. Since then the while younger families increasingly favoured fridge freezers. These stores, which are a uniquely British phenomenon, still sell around 35 per cent of the frozen food sold through the shops in Britain.

Today 35 per cent of families own a freezer and by 1980 it is expected that more than half of all households will have one. The space to stock these. Already freezer owners buy some people in the specialist freezer centre has a long-term future in its present form. Creating new demand for home freezer products like foil trays and freezer bags.

But the trend is now away from the very large freezers to the slightly more compact versions. The average size of freezer bought has declined steadily of other groceries as well as the average capacity for chest

could hardly sit on the sidelines and watch the bulk sales going to smaller processors, selling bulk packs of commodity-type lines like peas is not always very profitable. Findus, for example, claims to be quite satisfied with its small share of the bulk market. In its view it is far more profitable to concentrate on prepared foods where the price is not of such paramount importance.

All the big companies see growth in this prepared food sector. Birds Eye is particularly optimistic about the potential for frozen cakes and deserts while Findus has recently launched a range of products specifically aimed at slimmers. "All seem optimistic about the future," says Elmor Goodman, a senior executive at the company. "Certainly there have been problems over the last 18 months but with freezer ownership still increasing, they feel that 1977 was nothing more than a temporary setback for a basically healthy market."

Elmor Goodman

Popularity in U.S.

IN COLUMBIA, Maryland, a growing prosperous "new town." Giant Food Store offers its customers 68 different TV dinner combinations. There are five-course "hungry man" platters for big eaters, two-course entrées for small eaters, shrimp cakes, devilled crabs and fillets for seafood lovers, Weight Watcher dinners for dieters and Bavarian, Chinese and Mexican meals for ethnic food enthusiasts.

Near the TV dinners are the Pizzas—ranging from giant to bits of hors d'oeuvres—in cheese, cheese and tomato, pepperoni and deluxe with green peppers and mushrooms. The frozen vegetable section is a marvel of American merchandising, including what seems to be every possible packagable vegetable and a new Birds Eye line of mixed vegetables lustily labelled—San Francisco-style, Pennsylvania Dutch, Wisconsin Country, New England, Japanese, Chinese, Mandarin, Bavarian and Hawaiian.

It is in towns like Columbia that frozen foods enjoy their greatest popularity. It is very much a commuter community with a large proportion of working women who have little time to devote to food preparation. Its residents can and do afford to pay the somewhat higher costs of convenience foods. With more than 50 per cent of American women holding at least part-time jobs, industry specialists expect frozen food production to continue to climb as it has every year but two since 1939.

Giant Food, despite its extensive array of frozen foods, is one of the few chains to have cut back the space it allots to frozen products. Its managers, says Mr. Barry Scher, director of public affairs, noticed a drop in demand when food prices leaped 31.5 per cent during 1973 and 1974 and since then have cut back frozen food space by about 10 per cent.

But as it is to confirm that Giant's cutback is not typical of the industry, Mr. Sam Martin, publisher of Quick Frozen Foods Magazine, asserts that while some products were hurt during the recession years, others spurred ahead. He predicts that the present leap in beef prices (a record 6.6 per cent in April) will move customers towards the cheaper frozen beef imports. In

Development Development faltered during the war years but in the 1950s, as Americans moved to the suburbs, food chains moved with them and frozen food production tripled—from 2bn to 6bn lb. In the 1960s Americans began watching the box with TV dinners and meat pies, wide acceptance of prepared foods took production up to nearly 12bn lb. Today Americans have available almost anything which can conceivably be packaged and frozen—soups, sauces, candy, noodles, sandwiches, quiche, corn dogs, puddings, even snails.

Along with the spectacular growth in product types, the industry has spread to include some 20,000 companies, of which about 150 account for 90 per cent of production.

Nationwide, grocery stores have been reserving increasingly bigger space for frozen items. An A. C. Nielson Co.

survey found that average space devoted to frozen foods rose from 185 linear feet per store in 1972 to 274 in 1977. Of the whole, industry executives say frozen foods are still economical and energy-efficient.

Progressive Grocer in the April published a poll of chain store executives in which 53 per cent said that frozen foods are achieving "better than average" growth.

In 1976, the year for which the most recent figures are available, frozen products made the highest sales gains of all market items, after refrigerated foods. The leading star in most frozen prepared vegetables, juices and whipped toppings. Besides pizza, ethnic foods, are achieving wide spread popularity in the nation of multi-nationalities. Italian foods like ravioli and lasagna, are big sellers, and oriental dishes are available in wide variety. In 1977 Americans are expected to have spent \$850m on Mexican foods, of which frozen items constitute a large percentage.

Despite its position as the world's leading producer of frozen foods, the U.S. export picture is not particularly stable. Tariffs imposed by Common Market countries have limited trade in Western Europe, says Mr. Martin, and of course many of the underdeveloped countries do not have the demand for refrigerated products. Sales of frozen beef and veal fluctuated from 1971 to 1975 but steady gains were made in pork (134m lb in 1975) and chicken (126m lb) salmon, vegetables, fruits and orange juice.

Industry sources are talking about new developments in three distinct areas: fish, foods designed for micro-wave ovens, and institutional food purchases. Although Americans in 1975 consumed some 120m lb of seafood through retail outlets, much of this total included shrimp dishes, crab, clam cakes, fried scallops, fillets, fish sticks and chip dinners. "Americans simply haven't started eating fish properly," says Mr. Synnons. "They eat seafood but not the mundane fish like cod."

In a paper to be presented next month, Mr. Thomas B. House, President of the American Frozen Food Institute, predicted that the frozen food industry would appear to challenge the frozen food's role as the convenience food of the future. Indeed, developments like micro-wave ovens may even help the industry.

Even so, in most of the established markets the growth rate is likely to be slower than it was in the 1960s. Most of the basic foods which lend themselves to quick freezing have already been marketed in this way, so new product development in the future is likely to be mainly of prepared foods, aimed at particular segments of the market. In Britain, for example, Findus is now launching a range of calorie-controlled side the frozen food industry products for slimmers, while like United States are just Birds Eye is aiming for quite beginning to move in—though a different market with its new margins on catering products range of deserts.

As one frozen food industry executive says: "We are not inventing another frozen food, we are just refining the old."

As one frozen food industry executive says: "We are not inventing another frozen food, we are just refining the old."

For the foreseeable future, going to invent another frozen food, we are just refining the old. However, it will be the shops, not the fish finger, that will provide the main battle. There is plenty of room left for ground for the frozen food the right kind of new product. In 1974, the International Trade Centre in Geneva predicted that all European countries with the exception of Switzerland would at foods which have risen fastest in frozen food sales by 1980. The like peas have been subject both to the vagaries of fluctuating prices and to the obvious technical developments in frozen food production.

Emphasis

But against this, many manufacturers think that the eastern sector could provide a major growth market in the 1980s. In Britain, for example, Findus is now launching a range of calorie-controlled side the frozen food industry products for slimmers, while like United States are just Birds Eye is aiming for quite beginning to move in—though a different market with its new margins on catering products range of deserts.

Our view of success.

An empty plate is proof that someone's just enjoyed a good, nourishing, well-prepared meal.

We at Findus are concerned to bring you the best food to serve on that plate.

We like bringing out exciting new ideas for family meals, always carefully prepared from the finest ingredients.

Often using new techniques to add to our already considerable expertise.

Our ideas and our expertise are just two reasons why we're still the fastest-growing frozen food brand in the world.

Why you know you'll enjoy any of our wider range of top-quality products.

And why we say we hand you 'Success on a plate.'

FINDUS

INTERNATIONAL FROZEN FOODS III

The costs of raw materials

"THERE IS no problem of raw material supply for frozen food manufacture," according to one of Britain's leading producers, "but there are serious price and demand problems." And as in other sectors of the UK food industry many of these problems are blamed on EEC membership.

Raw materials for two of the industry's major sectors—meat and vegetables—are in basic oversupply, and though domestic supplies of fish—the other major sector—have been cut back drastically, worldwide availability is more than adequate.

In value terms fish is still the most important sector of the quick frozen food market, with sales in 1977 totalling £187m or 35 per cent of the market in volume, however, it shares second place with meat products with a 22 per cent share.

The problems of the UK fish industry are well documented. Loss of access to the Icelandic fishing grounds, inadequate quotas under the EEC's common fisheries policy, and reduced fishing opportunities in non-EEC waters following the general switch to 200-mile national limits have all contributed to a serious decline in the UK catch of the white fish on which the frozen fish industry depends.

The British trawling industry's catch declined only 3.5 per cent in 1977 but this disguised a much more serious fall in cod landings. Out of a total catch of 900,000 tonnes cod accounted for only 146,000 compared with 212,000 in 1976 and 345,000 in 1970. The total catch level has been boosted meanwhile by a big rise in landings of mackerel, a fish little used by the quick frozen food industry.

As cod represents three-quarters of the frozen food industry's fish supplies the decline in catches has led to a dramatic increase in imports. Latest estimates put the proportion of fish that some larger companies now import at more than 50 per cent compared with a "normal" level of about 10 per cent. Cod landings in the UK during the first quarter of this year were 54 per cent down on the corresponding

quarter of 1977 and if this trend continues imports will have to rise still further.

UK consumption of frozen fish is expected to rise by more than 60 per cent by 1985, giving it about 33 per cent of the total fish market. So if housewives remain steadfast in their insistence on cod-based products and the fortunes of the British catching industry do not improve dramatically, the frozen fish industry will have to change from a largely domestic operation to a costly import-based industry.

There has been little sign so far of any substantial change in the public taste for frozen fish, however, and while uncertainty remains on the final form the renegotiated EEC common fisheries policy will take there seems little prospect of a substantial improvement in the British cod catch.

The vegetables group occupies second place in the frozen food sales table with a 1977 total of £160m, equal to 30 per cent of the market. In volume terms it is the clear leader with a share of 50 per cent.

The clear leader within this sector is the potato. According to Ministry of Agriculture figures 142,200 tonnes of frozen potatoes (mostly in the form of chips) were produced in 1977 representing a sharp cut-back from the 1976 record of 177,100 tonnes. Birds Eye believes the cutback was even sharper and estimates output at about 120,000 tonnes only.

This reduction reflected partly the large carry-over from the previous season when housewives rejected high-priced potatoes (resulting from the drought) and partly the realisation that these same high prices were likely to lead to excessive plantings and a depressed market. This assessment was fully borne out by events and a further large surplus is believed to have been carried over into this year.

The problems of plenty which are besetting the frozen potato market are also, though less severely, affecting sales prospects for frozen peas. A very low crop in 1976, when only 75,600 tonnes of peas were frozen by the industry, led to excessive plantings last year and

eventual production of 128,900 tonnes. This proved too much for the market and about 25,000 tonnes have been carried forward into the current season.

The manufacturers have cut back contracted acreages for both potatoes and peas this season in an attempt to clear these surpluses but there are fears in some quarters that many farmers may go ahead with their crops anyway in the hope of finding buyers later. If this proves the case these extra supplies will obviously depress the market further.

In 1977 sales of frozen meat products totalled £139m—a 26 per cent share—but this is the most buoyant of the major sectors and receipts are expected to climb to £160m (27 per cent of the market) this year. This growth is expected to continue and Pindus has forecast that in volume terms meat products will be sharing the market leadership with vegetables at about 35 per cent each by 1986.

But this is not to say that the meat sector is suffering any fewer problems than fish or vegetables. In fact it is probably suffering more through common market-inspired market distortions than either of the others.

Beef is by far the most important raw material for this sector, with purchases currently running at about 60,000 tonnes a year, and it is the beef market which has been most severely affected by the EEC's common agricultural policy.

Commodity membership has cut the manufacturers off from many of their traditional suppliers, mainly in the Commonwealth and South America, and forced them to rely heavily on EEC production.

Birds Eye estimates that around two-thirds of the industry's beef supplies are imported, with about 15,000 tonnes coming from African, Caribbean and Pacific countries under the Lomé Convention and most of the remainder from other EEC countries—mainly West Germany, Denmark, Ireland and France.

Many people in the industry are bitter at having to pay what they see as "artificially high" EEC prices for beef when

cheaper supplies of meat more suitable to their purposes are available from third countries. There are arrangements under which third-country beef can be imported tariff-free but these operate in a way that precludes the frozen food manufacturers from making any significant use of them.

Manufacturing meat can only be imported directly into the EEC duty-free if it is to be used in products using a very high proportion of meat. This clearly rules out the beefburger—by far the industry's biggest meat product—in which a high proportion of meat "extenders" are used, and effectively limits this meat to the relatively minor "sliced roast beef in gravy" market.

The other way of importing manufacturing beef from third countries without paying duty is through the so-called "Jumelage" system. But this involves buying equivalent amounts of beef from the EEC's intervention stocks at "inflated" prices. Since this intervention beef is not suitable for manufacturing purposes—it needs too much trimming and preparation—the premium effectively applies to the third country imports, removing the advantage of duty-free access.

While EEC support prices remain at a level which encourages over-production these problems are likely to remain.

The remaining frozen food products, consisting mainly of confectionery and deserts, account for about 4 per cent of the market. But this is the main growth sector and the market share is expected to have reached 12 per cent by 1986.

These products are obviously less dependent on any single raw material than the major product groups but some manufacturers have experienced problems over the rising price of cream, partly because of the EEC's dairy regime. Artificial cream seems, judging by housewife reaction, to present a quite acceptable alternative, however, so these problems are unlikely to prove insurmountable.

Richard Mooney

A large frozen food store.

Retailers devote more space

FOR A NATION where shop-keeping has always been something more than just a tradition it is hardly surprising that Britain leads the way in one of the retailing phenomena of the 1970s: the home freezer centre.

In no other country—including the U.S.—has the home freezer centre assumed such a prominent position in the retail market as it has in Britain. Only in France has the retail trade set out to establish freezer centres like the internationally-known company Bejam. And that in France has happened only recently.

Yet according to a survey carried out by Birds Eye, the subsidiary of Unilever which is the world's largest frozen food group, Britain only achieved fourth place in the international consumption of quick frozen foods, league table. The U.S. frozen food cabinets has way out in front, followed slumped from 122,000 in 1972

by Sweden, Denmark, and then to 88,900 in 1977. However, because multiples nowadays usually instal three or four frozen cabinets in supermarkets total in-store frozen food capacity has risen substantially.

Within the UK market home freezer centres are the fastest growing sector of the retail end of the frozen foods industry. In the past year the share of the market captured by freezer centres has risen from 16 per cent to 19 per cent. But the main outlet for frozen foods in the UK still remains the multiple chains which account for 9 per cent of trade.

The Co-operative stores maintained their share of the market at 12 per cent with the symbol-supermarkets accounting for 9 per cent. Independent grocers and other types of store accounted for the rest of the market.

Over the past six years the number of shops, excluding specialist freezer centres, with frozen food cabinets has increased from 122,000 in 1972

to 88,900 in 1977. However, because multiples nowadays usually instal three or four frozen cabinets in supermarkets total in-store frozen food capacity has risen substantially.

Allocation

Retailers' allocation of floor-space to frozen foods is about four square metres on average in the UK. In the United States, where frozen food sales are much higher, the allocation for frozen foods tends to average about 10 per cent of the total retailing space. UK retailers, therefore, can be expected to increase their allocation of freezer capacity as demand grows. A recent survey, carried out by Birds Eye, reinforced this trend out.

Some 200 store managers asked how much additional floor space for frozen foods would be needed by 1980, over 50 per cent said that frozen foods would account for 10 per cent or more of overall store space by 1980. Up to 25 per cent felt that as much as a fifth of their floor space would be devoted to frozen foods by that time—and some put the total even higher.

The retailers were also given the chance to say which of the main categories of frozen food would demand the greatest increase in display by 1980. The four categories are frozen grocery foods, meat-on-bone, meat, and dairy foods. Only one in 27 of the 200 retailers felt that frozen foods would not require more space by 1980. Of the majority, however, from ten top retail chains were asked how much additional floor space for frozen foods would be needed by 1980, over 50 per cent said that frozen foods would account for 10 per cent or more of overall store space by 1980. Up to 25 per cent felt that as much as a fifth of their floor space would be devoted to frozen foods by that time—and some put the total even higher.

You'll see much more with a Birds Eye view from Olympia.

You'll get the Birds Eye view on Stand 24 at the very first International Frozen Food Industries Exhibition to be held at Olympia from June 25th to 29th.

There you'll find out that we at Birds Eye are the number one frozen food manufacturers in the world.

And also how we built the UK frozen food market into what it is today.

How we spend more on market research and advertising than all the other frozen food manufacturers put together.

And how, all the time, we're developing, improving and

adding to our product range. So we can offer you a range that no-one can equal.

From Black Forest Gateau to Brunchies and beefburgers. From creamy cheesecakes and curries to fish fingers and Florida Orange Juice. We cater for all tastes.

And we export to no less than forty countries. Including fish fingers to Australia, cream cakes to Holland and even China Dragon to Hong Kong.

Come and see the Birds Eye Stand number 24 for the whole story.

INTERNATIONAL FROZEN FOODS IV

A new distribution network

BOC INTERNATIONAL, the engineering group, recently announced a slightly surprising move for a company whose chief claim to fame in the 1970s has been a tough takeover battle in the U.S.

In May it revealed plans to set up a nationwide chain of cold stores in the UK from a base in Kings Lynn, Norfolk. The plans have been hatched in conjunction with Anglia Frozen Foods, the processors, and Frigo Scandinavia, bulk storage operators. The chain should be completed by the early '80s.

The idea is to provide freezer food chains, supermarkets and cash-and-carry stores with a faster and more hygienic service. Retailers will get drops from several manufacturers, and this will help the quality of their selling effort.

The move becomes slightly less confusing for the corporate analysts when they realise that BOC has been distributing chilled food for Marks and Spencer, via another subsidiary, since the early 1970s. It now

wants to use this expertise to penetrate one of the biggest growth areas in the food industry. Last year, total spending on frozen foods rose from £620m to just over £700m, an increase of 13 per cent.

But the precise areas of expansion in frozen foods give BOC's move an extra strategic significance. The real growth in the market recently has come from spending on freezer foods which has risen so rapidly during the past ten years that it is now within sight of overhauling expenditure by non-freezer owners as the main constituent of total outlays on frozen food.

Figures produced by Birds Eye illustrate the point. Last year, spending by freezer owners reached £245m, or about £40m less than the £285m by non-freezer owners. In 1972 the comparable figures were £30m and £165m.

Initially, independent freezer retailers like Bejam serviced most of this market. Larger retailers were content to leave

the market to the independents, possibly because of the high capital costs for both retailer and consumer of freezer food. Bejam, which now has over 120 branches and which went public some years ago on the back of its boom prospects, has seen sales rocket to nearly £30m since it was set up in 1968.

But as the independents have grown, so the larger multiples like J. Sainsbury, Tesco and the Co-op have started to add freezer centres to their stores in a bid to compete in the market. Effectively, the multiples have declared war on the independent freezer operators. A recent list of spending plans of the operators gives an impression of the scale and intensity of the competition.

The Co-op, which has spearheaded the involvement of grocery chains, has 121 separate freezer centres plus 235 in-store outlets. Tesco, now launching a big push to get into the market, has three separate freezer centres and is considering developing more. But it also

has freezer sections in 350 stores.

ASDA has freezer sections at all 62 outlets. Sainsbury has freezer capacity at 75 of its 184 stores, owns 15 separate freezer centres, and has another 24 integrated within supermarkets. Other leading multiples like Fine Fare, Key Markets, Allied Suppliers, Caters, Gateway and Macfisheries are also heavily involved in the freezer market.

"Most of the bigger freezer chains have continued to expand despite difficult trading conditions and increased competition from grocery outlets," notes Birds Eye in its annual survey. It calculates that Bejam, still the largest freezer operator, opened 17 new branches last year, and has 20 more planned for this year. Dalgely opened two new ones, and has eight more planned. Manchester-based Cordon Bleu also opened two, and has another six in preparation. Dewhurst added 11 branches to retain its place as the second largest freezer centre chain with 57 outlets.

As the multiples and the independents slug it out for dominance, low-cost and efficient distribution becomes a major factor in the operators' arithmetic. The point was made neatly in a recent survey on the frozen food market: "Because of the present frozen food market share out between the three major companies and the intense competition in-store, distribution has become a major flexible factor to increase sales by all involved. Greater sales depend on getting the frozen goods to where and when they are needed at a cost-effective price. The changing nature of the market place from independent small retailers to superstores and discount houses plus the rapid rise in transport and storage costs means that firms are constantly looking for greater efficiency in their storage and distribution costs. Economies of scale can only be achieved by larger orders and greater sales in smaller areas."

BOC's move is clearly well timed relative to the requirements of the market. It will compete with a number of well-established major operators.

One of the leading distributors is Unicold, formed by Birds Eye, the Unilever subsidiary, with SPD transport another offshoot of Unilever. Unicold has about 400 vehicles and 34 computerised depots. Ross Foods uses a computer to control the

movement of 1,000 product lines from factory to depot. Its fleet of 65 long-haul vehicles can deliver to the depot within 24 hours of an order being accepted. The actual distribution company, MDC, has 200 lorries to deliver frozen products on pallets from depot to shop. Findus, the other leading food processor, uses Alpine Refrigerated Deliveries, jointly owned with J. Lyons, which has 60 depots, 600 lorries, and services 60,000 outlets.

Calculation

Other frozen food companies use a combination of direct to depots, wholesalers or cash and carry; direct to retailer; shared transport facilities; and own brand distributors. Own-brand distribution works well for small companies who cannot afford their own distribution sales or marketing service.

A recent calculation estimated that there were about 100 cold storage depots in the UK, covering over 130m cubic feet of space. The largest included Christian Salvesen, Union Cold Storage and Frigo Scandinavia.

Intense competition at the retailing and distribution sections of the business possibly results from the monopoly exerted by one company—Birds Eye—at the processing end. The Monopolies Commission,

which reported on the frozen food market in late 1976, summed up the position in its analysis as follows: "In the supply of frozen foods to the retail trade (excluding home freezer centres) Birds Eye is by far the largest supplier, even though in recent years a number of new suppliers have entered this part of the trade. Birds Eye's major competitors are Findus and Ross Foods, each selling at prices at above those of the other two, and unable to supply a product range comparable to that of Birds Eye and any significant extent."

Mr. Edward Whitehead, managing director of Management Horizons, the London-based retail technique specialists, forecasts that the entry of BOC to this market could signal a decisive turning point. "The advantages," he says, "which specialist freezer food operators have always enjoyed of first-class supply lines and quality control will be sharply eroded, possibly within three years," he adds, "and advertising and, in new product development as well as in price, the situation as far as prices are concerned, has been characterised in the past as one of price leadership on the part of Birds Eye, with the Findus and Ross generally following its lead. Birds Eye's larger sales and long-established position in the retail trade give it important advantages over both Findus and Ross Foods. Among these advantages are we believe economic

ies of scale principally in the distribution of frozen foods and also in production advertising sales promotion and product development.

"Because the products of the three major suppliers are broadly similar in quality, Findus and Ross Foods have until recently been unwilling to sell at prices at above those of Birds Eye for fear of losing sales, yet have felt unable to undercut Birds Eye's prices to any significant extent."

Mr. Edward Whitehead, managing director of Management Horizons, the London-based retail technique specialists, forecasts that the entry of BOC to this market could signal a decisive turning point. "The advantages," he says, "which specialist freezer food operators have always enjoyed of first-class supply lines and quality control will be sharply eroded, possibly within three years," he adds, "and advertising and, in new product development as well as in price, the situation as far as prices are concerned, has been characterised in the past as one of price leadership on the part of Birds Eye, with the Findus and Ross generally following its lead. ies of scale principally in the distribution of frozen foods and also in production advertising sales promotion and product development.

Christopher Dunn

Retailers

CONTINUED FROM PREVIOUS PAGE

nearly two-thirds put frozen grocery foods at the top of their lists, with dairy foods second. The bulk of those surveyed expected to see a sharp rise in the number of different packs of frozen foods stocked by 1980.

Given this optimism by retailers it is surprising that there is not a greater incentive to make more efficient use of frozen food cabinets. Many retailers have insufficient back-up storage capacity which prevents them from restocking top-selling lines quickly and using the remaining space for a wider range of products.

In a survey of 2,500 superstores and supermarkets carried out by Birds Eye, a fifth were found not to have any back-up storage for frozen foods. Mr. Albert Heijn, who runs Holland's biggest food trader, told a recent grocery conference in Ireland that limiting the range of frozen foods being sold, because of lack of space, did not make sense.

This view was echoed by Mr.

Bill O'Gorman, chairman of W. H. O'Gorman Ltd., Britain's largest refrigeration contractor to supermarkets. "Twenty years ago an average supermarket had only about £7,000 invested in display cases and cold rooms, now it's more like £150,000," he says. "However, there is still a lack of back-up storage in many of the larger stores. Retailers tend to consider storage and cabinet space on the basis of forecasts for only one year ahead. More often than not, they are buying short."

Excise. In the past five years, imports of display equipment have outstripped home production. But British manufacturers are experiencing increased demand and are beginning to be more aggressive about marketing and publicity. Mr. Philip Cummins, sales director of Carter Refrigeration Display Ltd., which manufactures supermarket display cases, explains: "In the first half of 1978 we were due to carry out frozen food display case installations in supermarkets altogether worth over £500,000 which is about 12-13 per cent ahead of last year's comparative figures in real terms."

Dusseldorf's Euroshop '78 exhibition in April showed that the major refrigeration display case manufacturers have invested heavily in further improvements in the technology and styling of frozen food cases. Technical changes have been aimed at reducing operating costs with better temperature control and improved reliability.

On the consumer side, research has shown that buyers of frozen foods tend to shop around for either price or variety. A study over an eight-week period shows that only one major multiple or symbol group—excluding freezer centres—appears to attract more than half of all its customers' spending on frozen foods. The average is around 40 per cent.

Another trend apparent from research over the past year is a sharp rise in the number of fridge freezers being bought. This is influencing the source of freezer owners' purchases as the increased share of the freezer foods market taken by superstores demonstrates. One effect of this is to narrow the distinction between retail and bulk pack sizes. There is undoubtedly a swing to smaller packs by freezer owners.

David Churchill

Preference

He adds: "We must encourage retailers to take a longer-term view of the market. If they want to look into the future, they have to first look into the past and the growth of frozen food sales speaks for itself."

British retailers, however, seem to have a marked preference for imported display equipment according to figures published by the Customs and

Excise. In the past five years, imports of display equipment have outstripped home production. But British manufacturers are experiencing increased demand and are beginning to be more aggressive about marketing and publicity. Mr. Philip Cummins, sales director of Carter Refrigeration Display Ltd., which manufactures supermarket display cases, explains: "In the first half of 1978 we were due to carry out frozen food display case installations in supermarkets altogether worth over £500,000 which is about 12-13 per cent ahead of last year's comparative figures in real terms."

Development in equipment

COMPRESSOR and condenser units are the guts of any refrigeration system and radical changes in design are rare. However, in April a new rotary gas compressor—the AGR—was unveiled by a British manufacturer. It has been designed and developed by Prestcold Holdings, the largest member of British Leyland's SP Industries group, formerly the Special Products Division.

Following field trials this year it is to be manufactured in sizes ranging from 3hp to 30hp at Prestcold's Theale plant in Berkshire. The AGR is designed to combine the advantages of both the hermetic and open compressor while avoiding the disadvantages of both.

The company has spent £1m developing this multi-role compressor during a period of worldwide depression in the industry. It is hoped that it will have uses both in the refrigeration industry and in the growing market of air-conditioning units.

The AGR's main advantages include its ability to function as a gas motor as well as compressor and its high volumetric capacity. It could open the way to the use of low density refrigerants and has wider applications as a high temperature heat pump.

Prestcold is Europe's major industrial and commercial refrigeration group, with more than 80 per cent of the UK compressor and condenser unit market. The company also claims 40 per cent of the European market for semi-hermetic compressors and 5 per cent of the hermetic market in Europe.

In Europe the main companies producing hermetic compressors include the Danish company, Danfoss, the Spanish company, Unidat Hermetica and the Italian company, Necchi. Japan is an increasingly important market, but while the U.S. remains the biggest market for hermetic Prestcold because of licensing agreements, it is not open to agreements.

Prestcold shares the European market in semi-hermetics with companies like the German DMW, which also has plants in Belgium and France.

Prestcold exports half of the production from its four UK factories to more than 80 countries through its subsidiary Prestcold Searle International. It has subsidiaries in Canada, South Africa, Germany and France. Like its competitors in Europe Prestcold has been hit by what it describes as "a very depressed world market."

However, turnover rose last year by 38 per cent to £61m, of which £13m came from direct exports and a further £6.5m from its overseas sales companies. Profits before tax and interest were £2.5m last year against a budgeted £4m, a reflecting falling prices and squeezed profit margins. In spite of this investment has been maintained, with £4.5m spent in 1977 and £5m due for investment this year.

Prestcold's dominance of the home market is reflected right across the range of compressor sizes and condensing units and the company therefore provides a valuable insight into the equipment market at both the retail and cold storage ends. Until the mid-sixties Prestcold

was a household name in home refrigeration but the pressure of foreign imports, particularly from Italy, forced it to withdraw from the "white goods" market. One company official explained: "Importers were selling fridges cheaper than Prestcold could make them."

But the company continues to be the main supplier of small hermetic compressors to the domestic fridge manufacturers like Thorn, although LEC continues to make its own equipment. Last year it consolidated its hold on the UK market when Frigidaire, the U.S. owned by General Motors gave up making compressors in Britain and instead is now buying them from Prestcold for sale under the Frigidaire name.

There are two discernible trends within the home freezer market, both of which are said to be related to the pressure for space saving. One is the move away from chest freezers towards upright versions and the other, more pronounced trend, is towards fridge-freezers.

Figures produced by the Food Freezer and Refrigeration Council for April this year show that 91 per cent of homes in Britain now have a fridge. Home market sales of fridges, including fridge freezers, totalled over 1.5m last year and British manufacturers exported slightly more than 250,000 units.

In 1977 one in every four families had a freezer; this figure is increased to 36 per cent if fridge freezers are included. By 1980 it is estimated that 50 per cent of all households will own a freezer or fridge-freezer.

Sales of freezer units appear to have peaked in 1975 at about 0.55m and last year fell back to about 0.75m. The drop is more than compensated for, however, by increasing fridge-freezer sales which grew by 34 per cent last year to reach 570,000.

Domestic fridge and freezer equipment uses hermetic compressors—sealed units which must be replaced if they fail. Prestcold manufactures a series of these units at its Glasgow factory. They range in capacity from a fourteenth of one horse power to 3 horse power and have many uses besides domestic refrigeration. These include use in air conditioning equipment and ice-making machines. Commercial and industrial refrigeration demands that the units must be serviceable and therefore semi-hermetic and open compressors are manufactured with capacities ranging from 0.25 hp to 70 hp for the larger open compressor types.

Where large storage or sales areas are involved these units will often be arranged in series in a plant room circled to display cases in a supermarket play cases and coldrooms. The often reflect only a fraction of the store's refrigeration capacity for there may well be a series of cold stores and preparation rooms behind the sales area.

Refrigeration has applications not only in the retail sphere but also in catering and in special settings like hospital blood banks. Prestcold acts as refrigeration consultant, installer and service engineer in these markets and is the main contractor for many of the big stores and supermarket chains. The company claims 70 per cent of all UK retail contracting work, more than half of

which is for the food industry. Recently it completed installation work on the Bristol Carve four hypermarket, which includes 10 coldrooms totalling 54,000 cubic feet capacity, four preparation areas and 700 linear feet of display cases.

Prestcold is not involved in manufacturing the display case bodies or shelving. There are many companies making cabinets, one of the best known perhaps Royal. One particular trend in this field is towards wide-island freezer displays, particularly for the display of bulk home freezer packs, and away from vertical display cases set against shop walls.

Once the shop is installed, Prestcold has 800 radio-coupled vehicles operating out of more than 50 depots to provide a maintenance service. The company designs refrigeration plant for cold stores up to about 0.55m cubic feet using open compressors in series. Above this size companies like Hall-Thermotank can provide repressing compressors up to about 750 hp. Other forms of compressor like the screw compressor are also used for large cold storage plants.

In 1974 there were 100 cold storage depots in Britain, with about 134m cubic feet capacity. The three largest operators are Christian Salvesen, which owns about 40m cubic feet, Union Cold Storage and Frigo Scandinavia.

Christian Salvesen's clients include Marks and Spencer, Sainsbury, Kratt and County Fare. The company at present has 12 depots in the UK, with two under construction and works on a basic storage unit of 1.2m cubic feet. Its largest UK cold store is near Grantham in Lincolnshire and consists of

six 1.2m cubic feet units grouped together. The company also has a depot in France at Boulogne and is building another at Orleans which is due for completion next year. A third European depot is planned for an as yet undisclosed site.

The standard form of construction for cold stores is double steel walls with an insulating lining like polystyrene or polyurethane. The future trend may be to replace the steel with fibre-reinforced concrete sheeting while retaining a modular form of construction.

Inside the stores the major trends are towards more automated forms of storage and mechanical handling. Christian Salvesen has introduced mobile ladders into some of its cold stores and forklift and pedestrian stackers are likely to be at least partially replaced by overhead cranes.

Despite the depressed state of the refrigeration equipment industry, there are two clear areas of expansion—air-conditioning and heat recovery equipment. Prestcold took a further step into the air-conditioning market in 1976 by acquiring Searle from Hall-Thermotank for £2.5m. A heavy investment programme at its plant at Fareham, Hants, has followed.

The demand for more efficient use of energy is also likely to make the use of equipment for extracting heat a growth area. Prestcold sees heat recovery—for example, using the heat extracted in a cold store to ripen fruit in another store—as one of the main areas of future development.

Paul Taylor

Where there's frozen food, there's Ross.

Look around the frozen food market, and you'll find Ross. A centrepiece at the supermarket. In the freezer centre. Sitting in the corner shop cabinet. Mum home from work, the factory canteen manager, the chef of the grand hotel; they all know Ross. And we know them. Which is precisely why we have such a complete understanding of everything frozen foods can offer. Around the world, from Paris to Perth, Ross offers a first class service to ALL sectors of the frozen food market. Come and find out what we can offer you by visiting us on Stand 28 at the International Frozen Food Industries Exhibition, Olympia, June 25th - 29th 1978.

ROSS Good family food

Peas

READ AND INWARDLY DIGEST

One of the leading suppliers to Britain's top quality high-street stores, airlines and hotel groups. The company is also one of, if not THE largest, exporters of frozen vegetables from the UK, specialising in size graded peas.

Visitors at the exhibition will be welcome at STAND NO. 7 where a full range of home produced and imported vegetables, fruit and pasta products are on show.

FROZEN QUALITY LTD.

Bifonto (Bari). Telephone: 080-615312

will be exhibiting at the

1st INTERNATIONAL FROZEN FOOD INDUSTRIES

CONFERENCE AND EXHIBITION

STAND 12/30

between June 25-29th

General Frigo will present their production of frozen vegetables: artichokes, asparagus, peeled tomatoes, tomato cubes.

FARMING AND RAW MATERIALS

EEC opposes world zinc cartel move

By Margaret Van Hattem

THE EEC Commission has proposed Community action to oppose a move by the President Carter, asking him to reject demands by U.S. zinc producers for restrictions on imports and a sharp rise in import duties, which would hit Community producers hard.

It also hopes to persuade other major producers, such as Australia, Canada, Spain, Finland and Norway, to join in a "global view" and avert a move towards protectionist measures. However, it considers that the present crisis in the zinc industry, which is causing Community producers losses of about \$2m a year, is cyclical not structural, and indicated today that it would oppose any attempt to form a "cartel" of producers.

The Commission's proposals, forwarded to the Council of Ministers last night, aim to form a united stand among the nine before the special meeting of the International Study Group for Lead and Zinc to be held in Vienna on July 9-10.

According to the Commission, the present situation in the industry, with world zinc prices at about \$850 a tonne and EEC production costs at about \$750, is mainly due to over-production.

Hong Kong base for Goldsmith

BY ANTHONY ROWLEY IN HONG KONG AND CHRISTINE MOIR IN LONDON

SIR JAMES Goldsmith has transferred to Hong Kong effective control of Generale Occidentale, his French empire which embraces Cavenham Foods, General Alimentaire, Banque Occidentale, and Lloyds Insurance brokers Wigan Polaris.

At the end of a tangled web of manoeuvres, details of which were announced in Hong Kong yesterday, Generale Occidentale, the Hong Kong quoted investment company which Sir James owns just under 74 per cent, will own 35.1 per cent of Generale Occidentale.

Sir James's own holdings in Occidentale will be 8.85 per cent and Generale Occidentale will also have options over further substantial holdings of Occidentale plus convertible loan stock of Occidentale.

Contingency

It is widely expected that Occidentale and Sir James will eventually together own 50 per cent of Occidentale's shares.

It had been known for some months that Sir James had made contingency plans to transfer control of his business empire to Hong Kong.

He had expressed bitter dissatisfaction with the degree of restraints on business in Britain and with the political climate in France.

It emerged yesterday that those plans were set in motion last March when Sir James, then Maroche Securities, the former quoted U.K. property company, was sold by Occidentale subsidiaries to Evon SA, the Panamanian company in which Sir James is a substantial minority shareholder.

Immediately following this deal, Argyle acquired a 30.7 per cent stake in Occidentale. It also acquired a 20 per cent stake in Trocadero, a private French investment group in which Sir James holds 30 per cent.

Trocadero owns 18 per cent of Occidentale. Argyle is now increasing its stake in Trocadero to 49 per cent and will also buy outright from Trocadero 3 per cent of Occidentale. It will also have options over a further substantial stake.

Argyle, which also has substantial cash assets, some residual UK properties and a house-building company called Maidenhead, has now been sold to Generale Occidentale by Evon.

Oriental is to pay for Argyle by way of the issue of 85.25m shares at HK\$1.80 plus US\$1.5m of loan stock for which Evon will subscribe.

Oriental thus becomes an investment company valued at nearly £20m. Its last balance sheet showed that it was worth less than £1m.

Evon intends to distribute 23.5m of these shares to outside shareholders to maintain Oriental's public listing in Hong Kong.

Some 6.25m shares will be allocated to existing shareholders on the basis of three for one at HK\$1.80.

The remainder have apparently already been placed by stock-brokers Joseph Seab, with what is described yesterday as "European institutions."

The result will be to dilute Sir James's own holding in Generale Occidentale to 65 per cent.

In a separate but simultaneous deal, Generale Occidentale will issue a further 10.75m shares to independent shareholders of Occidentale in return for a further 3.1 per cent of Occidentale.

Oriental already owns 0.7 per cent of Occidentale.

In a separate but simultaneous deal, Argyle acquired a 30.7 per cent stake in Occidentale. It also acquired a 20 per cent stake in Trocadero, a private French investment group in which Sir James holds 30 per cent.

Ellerman calls for extended moratorium

BY IAN HARGREAVES, SHIPPING CORRESPONDENT

SOME OF Britain's biggest shipping companies are pressing for an urgent extension of the Government's recent debt moratorium plan for the industry.

The plan, announced last month, involves shipyard debt repayments being delayed for three years, with Government guarantees for the banks involved. But it is limited in scope and aimed at small tramp-ship companies.

Owners are saying now that these concessions should be available even to larger companies with foreign shipyards and that the larger companies with extensive non-shipping interests and alternative cash resources should not be excluded, as they are from the present scheme.

If the Government agrees to these requests, which have been discussed informally between the General Council of British Shipping and the Department of Trade, it would require access to section 8 of the 1977 Industry Act, rather than the Act's section 10 used for the original moratorium plan. This scheme was aimed at small, tramp-ship companies.

So far, the general council has been coy about the desire among at least some of its members for a more wide-ranging scheme, but the Mr. Dennis Martin-Jenkins, its former president and chairman of Ellerman Lines, delivered an outspoken plea for such an extension after his company's annual meeting yesterday.

Mr. Martin-Jenkins, whose company is one of those larger, predominantly liner shipping companies with strong non-marine interests ruled out from the present moratorium, said the industry faced severe dislocation if help was not given.

Ellerman Lines, like most of the other large British liner companies, has found itself supporting hefty debts on ships being delivered but which were ordered in better times.

Ellerman has eight ships worth more than £20m either delivered or on the way. All will be British-built, except the City of Durban container ship, which was built in Germany.

Mr. Martin-Jenkins said there was no reason why a moratorium should not apply to ships contracted in foreign yards if the basic objective was to assist the UK shipping industry.

Instalments

The company has talked to its bankers about rescheduling the debt, but clearly feels that a Government guarantee on deferred capital instalments is necessary.

Mr. Martin-Jenkins's statement to the meeting was positive about the group's non-shipping interests, but extremely gloomy about shipping. There were inherent disadvantages in an industry's cyclical nature. "We are, therefore, gradually reducing our investment in shipping," he said later, had such an extension after his company's annual meeting yesterday.

Mr. Martin-Jenkins, whose company is one of those larger, predominantly liner shipping companies with strong non-marine interests ruled out from the present moratorium, said the industry faced severe dislocation if help was not given.

Soviet oil buys East German skills

BY LESLIE COLT

EAST BERLIN, June 22. EAST GERMANY, Comecon's leader in advanced technology, has agreed to supply the Soviet Union with technical expertise in return for extra supplies of Soviet oil and gas in an important series of economic agreements.

Moscow is also to supply East Germany with credits to bridge its deficit with the Soviet Union, which could reach 3bn marks (£50m) this year.

The agreements, part of a wider package reached here by top economic officials from both countries, represent a further Soviet attempt to integrate more closely the economies of Comecon states.

East Germany has agreed to make wide-ranging concessions on its range of products to fit the needs of Soviet industry.

But East Germany has managed to stand firm in one crucial industrial area—micro-electronics.

Later last year East Germany and the Soviet Union agreed to co-operate in research and production in the electronics industry. In most cases this meant a transfer of technology to the Soviet Union. Since then the Russians have been attempting to get micro-processors included in the agreement but the attempts have been resisted by the East Germans.

The reason is that East Germany is working hard to acquire micro-processor knowledge from the West in the hope of becoming pre-eminent in this field within Comecon.

Similarly the East German chemical plant construction industry is to provide new ways of improving output in the Soviet food processing industry.

The East German printing machine industry is agreed to a "division of labour" in producing components for sheet-fed offset machines. East Germany is the largest Comecon exporter of printing machinery to the West.

An agreement was also signed on cooperation in satellite exploration of the earth's raw materials using an East German multi-spectral camera. The MKF-6 was built by Carl Zeiss Jena in a crash programme at great cost and was successfully used in the Soviet Soyuz 22 in September 1976.

Selective cooperation is to take place between the East German and Soviet photo-chemical industries to "improve the quality of photo-chemical products" and to introduce new lines.

BP in £20m bid for Monsanto Europe interests

BY SUE CAMERON

BP CHEMICALS is negotiating a £20m deal to acquire nearly all the U.S.-based Monsanto group's polystyrene interests in Europe.

BP Chemicals expects the deal to be concluded within the next few months. It follows the company's £20m purchase of the U.S.-based Union Carbide's main European subsidiaries, which was agreed with principle last week along with a £200m deal between Deutsche BP and Veba, the leading West German energy concern. The two BP Chemicals deals represent a further step in its bid fully to integrate its petrochemical activities.

If agreement is reached on this latest set of negotiations, Monsanto will sell BP its polystyrene plant at Winkles, near Lillie in France, plus its 33 per cent holding in Forth Chemicals, a UK styrene monomer company with plants at Grangemouth in Scotland and Baglan Bay in South Wales. BP Chemicals already owns the remaining 66 per cent of Forth.

BP would also acquire all the polystyrene and expandable polystyrene produced at Monsanto's Newport factory in Wales although Monsanto would continue to own and operate the plant. Included in the deal

Commitment

Monsanto is not integrated into basic raw materials in Europe. As a result, it sees the outlook for its polystyrene activities on the continent as unattractive. But the company said it would continue its "strong commitment" to its polystyrene operations in other parts of the world, including those of its Spanish affiliate, Alsicel, in which it has a 50 per cent holding.

The Monsanto plant at Winkles employs about 450 people who would all be given the chance to retain their jobs if BP Chemicals took over the factory.

Rate of inflation 'could rise again this winter'

BY ELINOR GOODMAN, CONSUMER AFFAIRS CORRESPONDENT

THE RATE of inflation could rise again this winter, Mr. Charles Williams, chairman of the Price Commission, warned yesterday.

There was every chance that inflation would stay near its present rate—just under 8 per cent—in the short term. But it might be less easy to keep it down to this level in the medium term.

Shop prices

Mr. Williams did not comment directly on forecasts made by Mr. Roy Hattersley, the Prices Secretary, that inflation would stay at or below its present rate for the rest of the year. But he seemed less happy than the Minister about the recent surge in commodity prices and earnings.

He said these increases would eventually feed through to shop prices and could result in a rise in the rate of retail price inflation.

The commission's own index of price increases notified to it has been showing an annual increase of about 7 per cent for the past four months. Mr. Williams said that the June figure looked like being about the same.

Movements in the commission's index usually take two and a half

Critical

The profit margin controls on companies, which have existed since 1973, are due to expire at the end of July, Mr. Williams said. This would have no impact on prices because the vast majority of companies were still trading way below their statutory profit ceilings.

In the commission's report for the three months to the end of April, published yesterday, it was critical of the profit safeguards written into the price controls. These provisions, which are being reviewed by the Department of Prices, were, the report said, inhibiting the commission's work in certain key respects.

Callaghan says 35-hour week will not solve unemployment

BY PHILIP RAWSTORNE

THE Prime Minister indicated yesterday that he had strong reservations about including introduction of a shorter working week in the next stage of pay policy.

TUC leaders see reduced hours of work as the best way of securing union support for a further period of wage restraint.

At a meeting today with Mr. Denis Healey, the Chancellor, who shares Mr. Callaghan's doubts, union leaders are expected to suggest a two-hour reduction as the first step towards a 35-hour week.

Mr. Callaghan, replying to a Commons question, confirmed that the issue would be discussed, but warned that adoption of a 35-hour week would not provide an easy solution to the problems of pay restraint or unemployment.

There was a "very good case" for a shorter working week, provided it did not result merely in more overtime payments. It would also be necessary, he said, to ensure that unit costs of production were not increased and that Britain's European competitors would be pursuing the same policy.

His approach echoed concern expressed earlier this week by the Confederation of British Industry about the impact of a cut in working hours on industry's unit costs and competitiveness.

Confederation leaders warned that their members would be urged to resist union claims for a cut in hours if the Government supported the proposal as a general entitlement in a Phase Four pay agreement.

They claimed that, contrary to the TUC view, the move was

more likely to increase unemployment by some 100,000 than reduce it.

The TUC intends, however, to press its point on the Government and will also call for further reflationary action to help reduce unemployment.

Some hard bargaining now appears likely if the Government

is to secure a new understanding with the unions on pay restraint. Ministers are still highly optimistic about the outcome, and it seems likely that the maintenance of the 12-month rule—one of the main props of pay policy over the past three years—will be taken as read.

THE LEX COLUMN

J. Lyons loses dividend battle

For three years J. Lyons clung to its dividend despite annual falls in its shareholders' funds—but the fourth year has proved too much. Following a £4.9m fall in reserves during the 12 months to March, the final dividend—which would have cost about £3.1m with unrelied ACT—has been omitted. The shares, which have been relatively strong lately, plummeted by 24p to 76p on the news.

A year ago, a final dividend was paid on the assumption that profits in 1977-78 could double to £20m or more but in the event the pre-tax figure emerged nearly two-fifths lower at £8.2m. The bad summer in 1977 cut profits on ice cream and soft drinks by £2m or more, food margins have been squeezed by the price war among retailers, and losses in the French meat-business may have risen by about £2m. But what really scuppered the group's mum forecast—and, as yet, initial optimism was the disclosure of the tea and coffee markets.

After a strong first quarter, customers started to run down earnings per share. Lyons's tea and coffee in the second half and in February. Yet another amazing statistic is that after the Price Commission cut tea prices about a month before its commodity costs came down. Profits on tea alone fell £2m.

On a share price of 248p (up) the capitalisation of Lyons is now £282m. This compares through to shareholders' equity very favourably with the £207m—where pre-tax profits reported earlier this week were only 6 per cent better at £20m.

The news from the sales front is that just about everything boomed last year. Lyons's military radio equipment continued to be the star performer, with strategic communications, data and command systems recording, and a instrument activities in joint second place. And once again the unquenchable prior book is at a record level. Even Lyons's food cannot keep up this pace, however. The stock market where the shares are on an earnings multiple of about 15 fully taxed, is also ungenerous to look too far into the wide blue yonder.

Meanwhile here is a business with sales of nearly £800m, and a market capitalisation of just over £30m. The shares remain strictly speculative.

Racal, the market's only real

Index fell 2.9 to 452.7

FT Government Securities Index

At its last balance sheet, J. Lyons had shareholders' funds of £108m and a relatively modest £50m of debt. In addition, its non-shipping interests contributed a healthy £3.7m last year and should earn more this year. However, it has eight ships on order worth roughly £10m and with loan repayments of £33m due between now and 1980 it would feel hampered if it could defer repayments until its shipping fleet gets back into the black.

Not everyone will agree with Lyons's strategy. Some schemes are already proposed to scrap Lyons's tea and coffee shipping companies and to merge the tea and coffee shipping companies with its shipbuilding capacity. British shipowners are more exposed than they would care to admit. They own 30 per cent of the world fleet, yet Britain's share of world trade was just 5.6 per cent in 1976 according to IMF statistics. If Britain's share of the world merchant fleet were to equate with its share of trade, it would involve a cut of more than a quarter in its

Gills

It looks as if most of the unfortunate stages of last week's ship sale have finally unwound. The news from the sales front is that just about everything boomed last year. Lyons's military radio equipment continued to be the star performer, with strategic communications, data and command systems recording, and a instrument activities in joint second place. And once again the unquenchable prior book is at a record level. Even Lyons's food cannot keep up this pace, however. The stock market where the shares are on an earnings multiple of about 15 fully taxed, is also ungenerous to look too far into the wide blue yonder.

UK shipping

If Ellerman Lines, a well run private UK shipping company, wants a three-year moratorium on its debts, the plight of the UK liner shipping industry must be worse than most had gently.

Record results from LEIGH INTERESTS

A summary of the Statement by the Chairman, Mrs. Joan Agar, for the year ended 31 March 1978.

Profits before tax at £281,520, are 46% up on last year.

Dividend: A final ordinary dividend of 2.33p per share payable on 27th July 1978 is proposed which with the interim of 1.30p gives a total for the year of 3.63p (1977 0.87503p).

Expansion of Leigh's proven and established activities has continued both within the main Midlands base and into other geographical areas.

Sealsafe—the unique toxic waste disposal process pioneered by Leigh—has worldwide potential. Two plants are to be constructed by licensees in Japan. Now Leigh has formed a partnership with R2Z, Overseas Holdings Ltd and Tunnel Holdings Ltd, under the STABLEX name, to extend the process to the major North American market. Leigh's new Sealsafe plant on the West Midlands 'Empire' estate opened in April, and the Stablex (Joint Leigh/Tunnel Holdings) plant at West Thurrock started operating this year. Another Sealsafe plant should be operational in Yorkshire in 1979.

Leigh's 'Empire' Site: The acquisition in April of brick-makers Barnett & Bradshaw's existing Leigh site opens up exciting prospects. The enlarged site will offer a complete of facilities, including the two Sealsafe plants, the manufacturing and sales of high quality specialised bricks, the sale of waste and facilities for the disposal of waste materials.

Other Acquisitions: During the year, several businesses have been acquired. These include: Gibbon's, a brick and tile business of John Gibbon, (Birmingham) Limited; Ellman's Tankers, based on the Hudson specialise in waste plant hire; and Leigh Flexible Structures now operates the mobile dams and barge company.

Management: High-calibre appointments have been made in the senior and operating positions to meet the challenges ahead.

Outlook: After the first two months of the current year, all divisions report a bright future, with confidence and the Board looking forward again with conviction to producing satisfactory results.

Summary of Results		1977/78	1976/77
Turnover	£000's	1,200	1,000
Profit before Tax	£000's	281	192
Profit after Tax	£000's	205	145
Extraordinary Items	£000's	Nil	68
Dividends	£000's	196	35
Reserves	£000's	185	127
Earnings per Share	pence	7.6	7.1
